EPIGRAPHIA INDICA

Vol. XVII, 1923-24.

That close relationship must have existed between Coromandel and the Far East during the earlier centuries of the Christian era is pretty certain. The part played by Tāmralipti or Tāmlūk as an important port in those days for the sea-borne trade between India and the Archipelago will similarly associate Bengal with the Far East. These Śailēndras were staunch Buddhists to whom all the magnificent Buddhist buildings which we find in Central Java, like the one which probably contained the Tārā image mentioned in the Chandi-Kalāsan inscriptions spoken of above, owe their origin. Now, the question is whether they were emigrants from India or were indigenous people of Java-Sumatra, who embraced Buddhism in preference to Hinduism. The Yūpa inscriptions of King Mūlavarmman from Koetei or East Borneo or other early epigraphical records, which have been brought to light from Champa, Cambodia or Indo-China by eminent French or Dutch savants, would show that India has had a considerable share in the colonization of the Far East. The Yūpa inscriptions, as Dr. Vogel has already pointed out in his very learned brochure,[1] inform us that the erection of the sacrificial posts on which they are engraved was due to the twice-born priests or Brahmans, who had carried their ancient civilization and religion to Borneo, as well as, to Java and Sumatra and that on these priests King Mūlavarmman conferred rich grants of gold and land; a fact showing that as early as about 400 A.D. high caste Brahmans or *Vipras* migrated to the Far East and settled there. Fa-Hian found Brahmans settled in Ye-poti (Java or perhaps Sumatra). Sumatran civilization and culture seem to be of Hindu origin. Sumatra was probably the first of all the Archipelago to receive emigrants from India.[2] The names like Coliya, Pandiya, Mēliyala, by which some of the tribes that have settled in West Sumatra are known, and the fact that emigrants from India are designated by the term Kēling or Kling, which is clearly derived from Kalinga, would show that Southern India, including the Telugu country, had ample share in the colonization of the island or the Far East, as Dr. Vogel has already stated in his paper.[3] The matrimonial alliance mentioned in our Nālandā charter, which the father of Bālaputradēva had with a mighty king of the Lunar race, would, perhaps, lead us to trace the origin of the Śailēndras of Java-Sumatra to India. If a conjecture can be hazarded, these Śailēndras were emigrants from Kalinga or say Southern India. I am not aware if the term Śailēndra was ever applied to any of the dynasties which ruled in the south[4] or any other part of India. It will be going too far to connect it with the Sailavamśa[5] or the Sailōdbhavas[6] or other dynasties like the Śilāhāra having somewhat similar appellations. It may be pointed out however, that the name of Malaiyamān, which is an exact Tamil rendering of the Sanskrit word *Śailēndra*, meaning 'the lord of mountain or mountains', is to be met with in some of the inscriptions discovered in the South Arcot and Salem districts of the Madras Presidency where it is applied to some chieftains, who flourished about the 10th century A.D. Tamil literature, however, knows of the Malaimāns, who might be attributed to the 7th and 8th centuries A.D. These chieftains were called Milādudaiyār or the rulers of Milādu, a contracted form of Malaiya-nādu or hill-country, and they claimed

[6] *Ibid*, Vol XI, p 282.

connection with the Chēdi family[1]　It is also noteworthy that sometimes their names end in *varmman*[¹]　From the records noticed above we find that the names of the Śailēndras of Java-Sumatra or Śrīvijaya ended in *varmman*[3]　The name of the Śailēndra ruler given in the Nālandā plate on the other hand ends in *dēva*　This looks rather strange　The name Bāla-putra itself, signifying ' young son ' is curious　This ending of *dēva*, however, occurs only in the prose and formal portion but not in the other or metrical portion, which describes and eulogises these *Śailēndras*　This would go to suggest that the suffix was left out because the metre did not require it, or possibly because it did not form an integral part of the name and would have been replaced by *varmman*, a general suffix or surname of the ruling caste or the Kshatriyas　The name, however, is pure Sanskrit as is the name of Tārā the mother of Bālaputradēva, or Dharmasētu, her father, and would point to emigration from India　Had the names of the two ancestors of Bālaputradēva, that is to say, his father and grandfather, been given, we could be definite in the matter, for, if these names were un-Indian, as in the case of Kundinga, his son Asvavarman and grandson Mūlavarman of Borneo, we could conclude that the Sanskrit names must have been taken after conversion to Hinduism, or rather Buddhism　But in none of the names of the Śailēndras do we find any foreign sound at all, suggesting that they were the natives of the islands originally and came into the fold of Buddhism afterwards.

The names of the Pāla kings and other personages mentioned in the introductory portion of this grant have been dealt with by Kielhorn or other scholars in connection with the contents of the Mungīr copper-plate inscription　So I need not notice them here　But, besides them and the Śailēndras, our record speaks of two more persons and they require special mention　One of them is Dharmasētu whom the inscription describes as a scion of the Lunar race and the father of Bālaputradēva's mother, namely, Tārā　To our regret it does not supply any other particular regarding him and it is hardly possible to identify him or to say

[1] Mr K V Sabrahmanya Ayyar, to whom I am indebted for this information, has kindly given me the following note on the Malaiyamārs —

" Ancient Tamil works mention the names of a number of Malaiyamān chiefs, who might be attributed to the 7th and 8th centuries A D　Some of these are —(1) *Valaiyamān Tirumudikkāri*, (2) *Malaiyamān Śōliya-Ēnādi Tirukannan*, (3) *Malādar-Kōmān Meypporal-Nāyanār* and *Narasinga-Munaiyaraiyar* of Tirumunaippādi　Their capital was Trukoilur, the head quarters of a *taluk* in the South Arcot district and a railway-station in the Kātpādi-Vilappuram section of the South Indian Railway　It is said to have been situated within the Chēdi country

The Malaiyamān chiefs appear to have been rendering help to one or the other of the principal powers of the South, viz, the Chēra, Chōla, Pāndya and the Pallava.　Narasingamunaiyaraiyar was a contemporary of the Śaiva saint Sundara-Mūrti-Nayanār of the 8th century A D　he is counted as one of the canonised 63 Śaiva devotees of the Tamil country　In the account given of No 3, in the Tamil hagiology, *Periyapurānam* figures a Tattan, whose name may be regarded as a variant of Datta.　Besides, one of the poems of the Tamil anthology, *Pattuppāttu* was composed in honour of a certain " Ārya King Piragadattan (Bhriga-Datta) "　It may be noted that the Malaiyamān chiefs belonged to the Bhrigu race as is evidenced by their inscriptions　Epigraphical reference to Narasimhamunaiyaraiyar is found in the Tanjore inscriptions of the Chola King Rājarāja I (A D. 985 1013)　In an early stone record of Rājakēsarivarman found at Tirunāgēsvaram near Kumbakonam, of about the 9th century A D　mention is made of Milādudaiyar-palli

It is interesting to note that the later members of the Malaiyamān family, who figure in numerous stone inscriptions, call themselves invariably Chēdiyarāyas (Chēdirajas) and they are mostly subordinates of the Chōlas of the 10th to the 13th centuries A D　The appellation *Chēdiyarāyan*, assumed by almost all the chiefs, if it is not a mere accident, as it could not be, must indicate that they were the rulers of the Chēdi country　This fact taken with the names like Datta would make one infer a colonisation at some remote past of a branch of the line of Chēdi Kings, in the South Arcot district, where we find them."

[²] E Hultzsch, *Ep Ind*, Vol VII, pp 185 and 145

[³] Dr. Vogel in the aforesaid publication (page 194) remarks —" Considering that among the dynasties of India proper there is a great variety of such royal surnames, as *āditya, gupta, chandra, dēvapala, rāta, vardhana simha,* and *sēna,* the almost universal employment of names in *varmman* in the Far East is certainly very remarkable "　The instance of our Bālaputradēva will furnish an exception

That close relationship must have existed between Coromandel and the Far East during the earlier centuries of the Christian era is pretty certain. The part played by Tāmraḷipti or Tāmlūk as an important port in those days for the sea-borne trade between India and the Archipelago will similarly associate Bengal with the Far East These Śailēndras were staunch Buddhists to whom all the magnificent Buddhist buildings which we find in Central Java, like the one which probably contained the Tārā image mentioned in the Chandi-Kalāsan inscriptions spoken of above, owe their origin. Now, the question is whether they were emigrants from India or were indigenous people of Java-Sumatra, who embraced Buddhism in preference to Hinduism The Yūpa inscriptions of King Mūlavarmman from Koetei or East Borneo or other early epigraphical records, which have been brought to light from Champa, Cambodia or Indo-China by eminent French or Dutch savants, would show that India has had a considerable share in the colonization of the Far East The Yūpa inscriptions, as Dr. Vogel has already pointed out in his very learned brochure,[1] inform us that the erection of the sacrificial posts on which they are engraved was due to the twice-born priests or Brahmans, who had carried their ancient civilization and religion to Borneo, as well as, to Java and Sumatra and that on these priests King Mūlavarmman conferred rich grants of gold and land ; a fact showing that as early as about 400 A. D. high caste Brahmans or Vipras migrated to the Far East and settled there. Fa-Hian found Brahmans settled in Ye-poti (Java or perhaps Sumatra) Sumatran civilization and culture seem to be of Hindu origin. Sumatra was probably the first of all the Archipelago to receive emigrants from India[2] The names like Coliya, Pandiya, Mēliyala, by which some of the tribes that have settled in West Sumatra are known, and the fact that emigrants from India are designated by the term Kēling or Kling, which is clearly derived from Kalinga, would show that Southern India, including the Telugu country, had ample share in the colonization of the island or the Far East, as Dr Vogel has already stated in his paper.[3] The matrimonial alliance mentioned in our Nālandā charter, which the father of Bālaputradēva had with a mighty king of the Lunar race, would, perhaps, lead us to trace the origin of the Śailēndras of Java-Sumatra to India If a conjecture can be hazarded, these Śailēndras were emigrants from Kalinga or say Southern India. I am not aware if the term Śailēndra was ever applied to any of the dynasties which ruled in the south[4] or any other part of India It will be going too far to connect it with the Śailavamśa[5] or the Śailōdbhavas[6] or other dynasties like the Śilāhāra having somewhat similar appellations It may be pointed out however, that the name of Malaiyamān, which is an exact Tamil rendering of the Sanskrit word Śailēndra, meaning ' the lord of mountain or mountains', is to be met with in some of the inscriptions discovered in the South Arcot and Salem districts of the Madras Presidency where it is applied to some chieftains, who flourished about the 10th century A D Tamil literature, however, knows of the Malaimāns, who might be attributed to the 7th and 8th centuries A. connection with the Chēdi family[1]   It is also noteworthy that sometimes their names end in *varmman*[2]   From the records noticed above we find that the names of the Śailēndras of Java-Sumatra or Śrīvijaya ended in *varmman*[3]   The name of the Śailēndra ruler given in the Nālandā plate on the other hand ends in *dēva*   This looks rather strange   The name Bāla-putra itself, signifying 'young son' is curious   This ending of *dēva*, however, occurs only in the prose and formal portion but not in the other or metrical portion, which describes and eulogises these Śailēndras   This would go to suggest that the suffix was left out because the metre did not require it, or possibly because it did not form an integral part of the name and would have been replaced by *varmman*, a general suffix or surname of the ruling caste or the Kshatriyas   The name, however, is pure Sanskrit as is the name of Tārā the mother of Bālaputradēva, or Dharmasētu, her father, and would point to emigration from India.   Had the names of the two ancestors of Bālaputradēva, that is to say, his father and grandfather, been given, we could be definite in the matter, for, if these names were un-Indian, as in the case of Kundinga, his son Aśvavarman and grandson Mūlavarman of Borneo, we could conclude that the Sanskrit names must have been taken after conversion to Hinduism, or rather Buddhism   But in none of the names of the Śailēndras do we find any foreign sound at all suggesting that they were the natives of the islands originally and came into the fold of Buddhism afterwards   .

The names of the Pāla kings and other personages mentioned in the introductory portion of this grant have been dealt with by Kielhorn or other scholars in connection with the contents of the Mungīr copper-plate inscription   So I need not notice them here   But, besides them and the Śailēndras, our record speaks of two more persons and they require special mention   One of them is Dharmasētu whom the inscription describes as a scion of the Lunar race and the father of Bālaputradēva's mother, namely, Tārā   To our regret it does not supply any other particular regarding him and it is hardly possible to identify him or to say

[1] Mr K. V Subrahmanya Ayyar, to whom I am indebted for this information, has kindly given me the following note on the Malaiyamārs —

"Ancient Tamil works mention the names of a number of Malaiyamān chiefs, who might be attributed to the 7th and 8th centuries A D   Some of these are —(1) *Malaiyamān Tirumuḍikkāri*, (2) *Malaiyamān* Śōḷiya-Ēnādi Tirukannan, (3) Malādar-Kōmān Meypporul-Nāyanār and Narasinga-Munaiyaraiyar of Tirumunaippāḍi   Their capital was Tirukoilur, the head-quarters of a *taluk* in the South Arcot district and a railway-station in the Kātpāḍi-Viḷupuram section of the South Indian Railway   It is said to have been situated within the Chēdi country

The Malaiyamān chiefs appear to have been rendering help to one or the other of the principal powers of the South, viz, the Chēra, Chōḷa, Pāndya and the Pallava   Narasingamunaiyaraiyar was a contemporary of the Śaiva saint Sundara-Mūrti-Nayanār of the 8th century A D   he is counted as one of the canonised 63 Śaiva devotees of the Tamil country   In the account given of No 3, in the Tamil hagiology, *Periyapurānam* figures a Tattan, whose name may be regarded as a variant of Datta   Besides, one of the poems of the Tamil anthology, *Pattuppāṭṭu* was composed in honour of a certain "Ārya King Piragadattan (Bhṛga-Datta)"   It may be noted that the Malaiyamān chiefs belonged to the Bhṛgu race as is evidenced by their inscriptions   Epigraphical reference to Narasimhamunaiyaraiyar is found in the Tanjore inscriptions of the Chola King Rājarāja I (A D 985 1013)   In an early stone record of Rājakesarivarman found at Tiruvāgīśvaram near Kumbakonam, of about the 9th century A D   mention is made of Milāduḍaiyar-palli

It is interesting to note that the later members of the Malaiyamān family, who figure in numerous stone inscriptions, call themselves invariably Chēdiyarājas as (Chēdirajas) and they are mostly subordinates of the Chōḷas of the 10th to the 13th centuries A D   The appellation *Chēdiyarāyan*, assumed by almost all the chiefs, if it is not a mere accident, as it could not be, must indicate that they were the rulers of the Chēdi country   This fact taken with the names like Datta would make one infer a colonisation at some remote past of a branch of the line of Chēdi Kings, in the South Arcot district, where we find them "

[2] E. Hultzsch, *Ep Ind*, Vol VII, pp 135 and 145

[3] Dr. Vogel in the aforesaid publication (page 194) remarks —"Considering that among the dynasties of India proper there is a great variety of such royal surnames, as *āditya*, *gupta*, *chandra*, *dēvapala*, *rāta*, *vardhana* *simha*, and *sēna*, the almost universal employment of names in *varmman* in the Far East is certainly very remarkable"   The instance of our Bālaputradēva will furnish an exception

whether he was an Indian king or some ruler in the Far East The name whether it is read as Dharma or Varma-setu appears to be new. The other interesting name occurring in the document is that of Balavarmman the ruler of Vyāghratatī-mandala, who acted as *dūtaka* on behalf of the Magadhan king. As to why he was selected or what special connection he had with the ruler of such a remote island as Sumatra or Java, and whether he had been there or known personally to that king our inscription makes no mention Apparently, there was no direct political relationship between the two; for, we know from the Khalimpur[1] plate of Dharmapāladēva that the Vyāghratatīmandala lay within the *bhukti* of Pundravardhana, which was under the sway of the Pāla king Dharmapāla and, evidently, of Dēvapāladēva after him. Pundravardhana is the same as Paundravardhana—Pundra and Paundra being synonymous—which is the modern Rājshāhi district of Bengal[2]. The use of the word *adhipati* would indicate that in this instance at least the term *mandala* connotes a larger area than *vishaya*, which in the majority of cases seems to include a *mandala*[3]. During the reign of Dēvapāladēva, Vyāghratatī was governed by a distinct ruler called Balavarmman. The way in which he is praised in this epigraph, as the right arm of the Emperor, would show that he had a high rank even though he was one of the feudatories of Dēvapāladēva. As, however, our plate gives no genealogy or particulars about him his personality is very vague. A few homonymous[4] rulers are known to have flourished about that time but they appear to be quite different personages and even their dates will not agree with that of this plate. It looks curious that though the charter mentions the *dūtaka* of the King of Magadha yet it leaves the ambassador or ambassadors of the Javanese King unnamed altogether.

The vague manner in which the inscription describes the rulers of the Far East or Sumatra-Java and their relative king of the lunar race would show that its author did not know much of them. He knew of Bālaputradēva and his mother Tārā. The latter he compared to the goddess of that name It is not improbable that the grant registered in the epigraph was made chiefly at her instance

Our plate mentions several places calling for remarks Out of these, I have already noticed three, namely, *Suvarnnadvīpa*, *Yavabhūmi*, and *Vyāghratatī* Of the remaining ones Nālandā is the most important. The way, in which this record speaks of it, would show that it continued to be as important a centre of Buddhist lore as it was during the time of Hiuen Tsang's visit The spelling of the name given in this document is Nālandā which is the correct way of writing it The same spelling is given in a votive inscription on the image of

[1] *Ep. Ind.*, Vol. IV, pp 243 ff. *J. B R A. S*, LXIII (1894), pp. 39 ff.

[2] Smith *Early History of India*, p. 373, As has already been stated by Cunningham (*A S R.*, Vol. XV, pp. 112 ff.) Kāntāra is another name of Pundra or Paundra, i.e., sugarcane, and the Mahākāntāra of the Allahabad inscription of Samudragupta, the Great, was probably an older name of this province which, about the middle of the fourth century of the Christian era, was governed by a King Vyāghra Thus it does not appear to be improbable that the district of *Vyāghratatī* or the tiger's precipice—unless of course *vyāghra* is taken in the sense of castor oil in which case the word *Vyāghratatī* would be the slope marked or overgrown with castor plants,—was named after this tiger king.

[3] This would rather show that no mistake was made in the text of the Khalimpur grant and that Kielhorn's statement in the *Ep Ind.*, Vol IV, p 253, footnote 3 that it was, will be obviated

[4] For instance we know of a Balavarman, the lord of Prāgjyōtisha (Gauhati or Assam) from the Nowgong copper-plate (Dr. A F. Hoernle, *J. B A. S* LXVI, pp. 285 ff.) and another of Kārūsha or rather Brihadgriha (Kielhorn, *Ind Ant.* Vol. XX, pp 123 ff). On palæographic grounds the former of the two has been assigned to the last quarter of the 10th century or say nearly one century later than the date of Dēvapāladēva. The other is too little known to admit of identification. The third ruler of the name, who will synchronise with our document, was the father of Avantivarman II, who was the feudatory of Mahēndrapāla of Kanauj (cir. 890 A. D), To think of identifying him with the Balavarmman of the Nālandā plate will be altogether unreasonable, for he was the ruler of Kathiawar, or Saurāshtra and a feudatory of the formidable rival of the monarch of Bengal.

Sankarshana which was dug out of the same site[1] and the newly discovered statue of Tārā. It again occurs not only in some Jaina writings but such an old work as the *Dighanikāya*[2]. However, it seems to be noteworthy that none of these works called Nālanda a university but only a prosperous town though Hiuen Tsang describes it as if it were a University. The way in which it is described in our plate would show that it was really a centre of Buddhist learning

As to the remaining place-names mentioned in this document, I think, Śrīnagara or Śrīnagara-bhukti must be identified with modern Patna, which as a district, includes Rājagriha (Rājgir) and, as a division or commissionership, comprises the district of Gayā, even now. It is true that in the Khalimpur grant of Dharmapāladēva, which has been referred to above, the name given for the city is Pāṭaliputra and not Śrīnagara or Nagara, still, I think, there were two designations, the one, *viz.*, Pāṭaliputra, which meant the whole town and the other, *viz.*, Śrīnagara, the main part of it, like the Bankipore of to-day. Nagara means the chief town generally, but in this case it meant *the* town, the prefix *Śrī* implying prosperity or wealth of the town. In other words Pāṭaliputra was the *pattana*[3] and the seat of Government, especially in earlier days during the supremacy of the Mauryas or the Imperial Guptas,[4] lay there, and Śrīnagara was its principal portion where the office of the *bhukti* or division was situated. One was concerned with the whole government but the other only with eight hundred[5] villages coming in its jurisdiction or *bhukti*. Thus Śrīnagara must have been a part of the whole which was termed Pāṭaliputra[6] That, apparently, is the reason why the latter and not the former appellation of the town is to be met with in literature.

That Rājagriha and Gayā are respectively the Rājgir and Gayā of to-day requires no demonstration The latter is a district still, though the former has now dwindled into a ruined town of the Bihār subdivision of Patna.

Regarding the villages which formed the object of the grant or endowment registered in the charter, we are told that Nandivanāka and Manivātaka were situated in the Ajapura-*naya* subdivision, Naṭikā in the Pilipinkā, and Hastigrāma in the Achalā-*naya* or subdivision of the Rājagriha *vishaya* or district, and that Pālāmaka was situated in the Kumudasūtra *vīthi*, a subdivision of the Gayā district If similarity of sound can be depended on, I would propose the following identifications to which proximity of Nālandā will lend a great support The Ajapura ' *naya* ' or subdivision of the inscription may possibly be represented by the Ajaipur[7] village in the Ajai Hisse Chahāram Mauzā in the Bihār Thānā and the two villages Nandivanāka and Manivātaka, granted in it, would be the Nediune or Naunvan and Manianwan villages of these days, which are included in the Bihār Thānā. Pilipinkā I am inclined to identify with the Pilkhi or Pilkee Mauza and the Naṭikā village with the Nai Pokhar of to-day, both lying in the Silāo Thānā. Though I am unable to offer any identification for the ancient Achalā yet, I fancy, the village Hasti or Hastigrāma of the grant might be the Hethoa Bighā village of the Bihār Thānā if not the Hathi Tolā of the Maner Police subdivision The old village directory[8] of the Gayā district available to me does not, apparently, give any name

[1] Two strokes in place of one.

[2] Symbol for म् at the end of a pāda is peculiar.

[3] Kielhorn has समेता°.

[4] This daṇḍa could be left out.

[5] Kielhorn has तेर् तैर् which cannot be correct.

[6] The way of writing the letter ट is peculiar.
This daṇḍa could be left out.

Page 108 —*Inscription B* —The missing second plate of this inscription has been discovered at Iyāveṛa by Mr D B. Diskalkar, M.A, Curator, Watson Museum of Antiquities, Rajkot, and will shortly be published by him in this journal — Ed

„ 108, f. n 2 —For *upadmānīya* read *upadhmānīya*.

„ 109, l 10 —Dr. Sukthankar is not right in his guess, for the *dūtaka* of the grant as found in the missing plate is Rudradhara. But the writer was Kikkaka, here spelt Kikaka —Ed

„ 109, f n 2.—*For* Dhruvasōna *read* Dhruvasēna

„ 110, l 3 —*For* Rotghamitra *read* Rōtghamitra.

„ „ l. 5 —*For* Āśvina *read* Āśvayuja

„ „ Text l. 7 —*For* -gītan *read* -gītau

„ „ „ 8 —*For* āchchhettā *read* āchchhettā

„ „ „ 9 —To =vvā, *add* the footnote 'Read =vā'.—Ed.

„ „ „ 11 —*For* Kikkakena *read* Kikkakēna

„ „ f n. 2 —For *āgamu* read *āgāmi*

„* 111, l 3 —*For* '34' *read* '33'

„ „ „ 8.—*For* 'these two sets' *read* 'this set'.

„ „ „ 16 —*For* Tirunalūr *read* Tirunālūr.

„ „ „ „ — For °nallūr *read* °nalūr

„ „ „ „ —For 'Sunepuha°-' *read* 'Sunaipuha°-

„ „ „ 17.—*Insert* after 'Nārāyanāmbikā', " or Nāranadēvi-auva "

„ „ „ 11 from the bottom —*For* Tirunalūi *read* Tirunālūi

„ „ „ „ „ „ *For* -°perumā-nallūr *read* °perumā-nalūi

„ „ „ 10 „ „ *For* Sune° *read* Sunai°

„ „ „ 9 „ „ *For* Mēlmuṛi *read* Mēlemuṛi

„ „ „ „ „ „ *For* Mala-nādu *read* Mala-nāḍu

„ „ „ 8 „ „ *Insert* before 'villages', "first three"

„ „ „ 7 „ „ *For* Tiruchchirāppalli *read* Tiruchchirāppalli.

„ „ „ 5 „ „ *Insert* after 'twelve' the following " *harttānas* of food should be supplied, one "

„ „ „ „ „ „ *For* lamps *read* lamp

, „ „ „ , „ *Insert* after 'burned' " one "

„ „ „ „ „ „ *For* garlands *read* garland.

„ „ last line — *For* 1,82 *read* 1,823

„ 112, l 2 —Insert '*tāṉ-payir*' after '*punsey*'

„ „ „ „ For °*ppēṛu*° read °*pperu*°

„ „ „ 3 —Cancel (*taṛi-kaḍamai*)

„ „ „ „ For *ālukku*° read *olukku*°

, „ „ 4 —For *kattigai-arasaram* read *kattige-arasara*

„ „ „ „ For *patai-kānikhai* read *padai-kānike*

„ „ „ 10 —For *Pēr*° read *Pēr*

„ „ „ 11.—Omit the passage from *Ālukku*° to *ntrānikkam* in l 13

„ „ „ 13 —For *Magamai* read *mahamai*

„ „ „ 17 —For *Kattigai-arasaram* read *Kattige-arasara* and *add* in a foot-note [This term does not indicate any tax on firewood as the author suggests but may have to be connected with *kattige-yara*, a mace-bearer or in this case the village servant who carries the staff of office with him —Ed]

―――

*[The following numerous corrections on pp 111 to 117 have been necessitated by the proof being passed by the office in the belief that it had been revised by the author]

Page 112, l 18.—*For* -kkānikkaı *read* kānike

" " " 23 —*For* Tıruchchırāppalli *read* Tıruchchırāpalli

" " " 23 —*For* Tirunalūr *read* Tırunālūr

" " " 24 —*For* Śeranaı° *read* Śeranaı° and *for* °nallūı *read* °nalūı

" " " 24 —*For* Mẹlmurı *read* Mēlēmurı

" " " 24 —*For* Mala-*nādu* *read* Mala-nādu

EPIGRAPHIA INDICA

VOLUME XVII

No 1 —GUDIMALLAM PLATES OF THE BANA KING VIKRAMADITYA II

By Professor E Hultzsch, Ph.D , Halle (Saale)

These plates were found at Gudimallam in the Kālahasti Zamīndārī, and were forwarded to Rao Bahadur H Krishna Sastri by Mr K Raghaviah of Kālahasti The they have been acquired for the Government Central Museum, Madras

The copper-plates are five in number and have nine faces of writing, the outer side of the first plate being left blank The plates are not raised into rims for the protection of the writing, which is, however, in good preservation They measure $7\frac{1}{4}''$ in length and $3\frac{1}{3}''$ in breadth, and are strung on a copper ring, which measures about $2\frac{1}{4}''$ in diameter, and the two ends of which are fixed in a circular seal The hole through which the ring is passed was enlarged after the inscription had been already engraved This led to the total or partial destruction of some letters, a few of which were subsequently engraved a second time below the ring-hole The seal bears, in relief, the figure of a bull couchant, facing the proper right, and above it what looks like a lamp-stand and a crescent. The weight of the plates with ring and seal is 133 *tólās*

The alphabet is old Grantha (ll 1-53) and old Tamil (l 53 f) In the Grantha portion the superscribed *i* is not always distinguished from *i*, nor the subscribed form of *ri* from that of *r* Final forms of *m* occur in lines 3, 7, 35, 48, 49, 53 In -*dhrik* (l 30), *chēt* (l. 37), and °*vān* (ll 26, 29, 47) the Virāma is expressed by a small dash at the right of the final consonant

The Grantha portion consists of Sanskrit prose (ll 1, 14, 33, 37-47, 51-53) and of 22 verses in the Anushtubh and Āryā metres. Both the language and the metre of some of the Āryā verses are incorrect In the footnotes on the text I have suggested a few possible emendations, but am unable to furnish a fully satisfactory text and translation of the eight opening verses, which are addressed to Śiva The remainder of the inscription is quite intelligible, but the wording of it is not always correct The compounds -*nām-ākhya* (l. 23), -*ākhya-nāmaka* (l 35), and *kidrig-vidha* (l 37) are tautological In lines 37-39 the author violates the rules of composition by comparing words in the dative plural to nominatives singular, cf. *Sāhityadarpana*, Translation, p 301,] In line 50 the neuter *yuga* is used as a masculine, and in line 53 the neuter *likhitam* forms the predicate of the feminine *prašastih* (l 52) The record ends with a short postscript in the Tamil language

As regards orthography, *au* is expressed by *ō* in =*sō* (l 10) and *mōli* (l 12) The group *ksh* is replaced throughout by *tsh*, *dm* by *tm* in *patma* (ll 4, 37), *dh* by *th*· in *narāthipa* (l 24), and perhaps *ddh* by *tth* in lines 5 10, 11. The lingual *l* is used in *gala* (l. 2) The

A

rules of Sandhi are neglected in *Nandivarmmā iti* (l 19), *nriparāt=bhuja-* and *prādāt-grāman=* (l 34), *chēt* (l 37), and °*bhyah* (ll 39, 42 (twice), 52) In -*nipunahsh=shadgunē* (l 30) and in four other cases (ll 38, 40, 41 (twice)) final Visarga is expressed both by its original form and by a sibilant Consonants are doubled throughout after *r*, and before *y* and *r* in -*maddhyi* (l 2), -*viddhyud-* (l 3), -*viddrā(ddru)ma-* (l 3), -*māttras=* (l 5), *Ruddrō* (l 9), *Girittrēna* (l 33), and *pittrē* (l 35), but not in *traividya* (l 41), *tsha(ksha)tra* (l 23), *putrēna* (l 32), *vēda-traya* (l 39), and *vikrama* (passim) The superscribed *r* of double consonants is often omitted through carelessness

After lengthy invocations of Śiva, which have already been noticed in the preceding remarks the inscription introduces the demon king **Bali** (v 9), who is stated to have been the son of Virōchana, and to have granted the earth at a sacrifice to Krishna (*i e* to Vishnu in his incarnation as a dwarf) One of Bali's descendants was king **Nandivarman** (v 10 f) His son was **Vijayāditya** (v 12), his son **Malla-dēva of the Bāna race** (v 13), his son **Jayamēru** (v 14) *alias* **Vikramāditya** (v 15), his son **Vijayāditya** (vv 16, 20, and l 44) *alias* **Prabhumēru** (vv 17, 21), and his son **Vikramāditya** (v 20 and l 44) or **Vikramādityavarman** (v 18)

According to verse 19 a king named **Nanda**[1] (who may be meant for the Nandivarman of verse 10 f) had granted to Brāhmanas the village called **Viprapītha** With the sanction of his father (v 20 and l 45) Vijayāditya's son Vikramāditya granted protection (*raksha*), *i e* a confirmation of the former grant, to the Brāhmanas of this village (l 45), because he had obtained a boon from the god of the **Parasurāmēśvara** temple (l 43) In verse 21 f the donor, Prabhumēru's son, requests future kings to protect his grant Lines 50-53 record the names of the composer and of the writer of this eulogy (*praśasti*) A postscript in Tamil states that the revenue assessment (*puram*) of the village amounted to 500 *kādi* of paddy and 10 (*kalañju* of) gold (l 53 f)

Before discussing the historical information which is supplied by this inscription, I may state that Viprapītha (v 19 and l 45) is clearly a Sanskrit equivalent of **Tiruvippirambēdu**, the ancient name of **Gudimallam**,[2] where the temple of Parasurāmēśvara (l 43) exists to the present day

When my late friend Venkayya wrote his learned article on five Bāna inscriptions at Gudimallam, which was destined to remain his last contribution to the *Epigraphia Indica* (above, Vol XI, pp 222 ff), no other genealogical inscription of the Bāna dynasty was available but the Udayēndiram plates published by Kielhorn (above, Vol III, p 74 ff) From the new plates we now learn that the king Prabhumēru of the Udayēndiram plates had also the name Vijayāditya, and that his father, who is called Bānavidyādhara in the Udayēndiram plates, had the two additional names Vikramāditya and Jayamēru These fresh facts may be used for locating in the genealogical tree a few Bāna kings who are referred to in other inscriptions A *viragal* which was published by Mr Rice[3] belongs to the reign of Vikramāditya-Jayamēru *alias* Bānavijyā(dyā)dhara, and mentions a military commander Prabhumēru who may be identified with his son and successor Vijayāditya-Prabhumēru Inscriptions both of Vikramāditya-Jayamēru *alias* Bānavidyādhara and of Vijayāditya-Prabhumēru exist also

---

[1] An early Rāshtrakūta king Nandarāja is supposed to be mentioned in the Multāi plates of Śaka 631 (*Ind Ant*, Vol XVIII, p 234), but the actual reading of the plate (l 9) seems to be नन्द्रराज In the Tiwarkhēd plates of the same king (above, Vol XI, p 279) the reading is distinctly नन्नराज The genealogy of this Nannarāja is the same as in the Multāi plates of Śaka 631, but the date of the Tiwarkhēd plates is Śaka 553, which would mean that Nannarāja reigned at least 78 years (?)

[2] See Venkayya's remarks, above, Vol XI, p. 222

[3] *Ind Ant*, Vol X, p 39, No II, and *Ep Carn*, Vol. X, Śrinivāspur Tāluk, No. 6

in the Punganūr Zamīndārī of the North Arcot District[1]. One of Venkayya's Gudimallam inscriptions[2] contains a Śaka date—820—which must be assigned to the reign of Vijayāditya-Prabhumēru, because it calls the Bāna king Vijayāditya, to whose reign it belongs, the son of a queen of Bāṇavidyādhara, i e of Vikramāditya-Jayamēru. Another queen of Bāṇavidyādhara, named **Kundavvai**, was the daughter of **Pratipati-Araiyar**, i e of the Ganga king Pṛithivīpati I,[3] who was a contemporary of the Rāshṭrakūṭa king Amōghavarsha I[4] and of the Pāndya king Varaguna.[5] Two further inscriptions of Vijayāditya (Prabhumēru) furnish the Śaka dates 827 and 831.[6]

According to the Udayēndiram plates, Prabhumēru's great-grandson, **Vikramāditya-Vijayabāhu,** was a friend of **Krishna-Rāja,** who used to be identified with the Rāshṭrakūṭa king Krishna II (about A D 900). This identification cannot be upheld, because we have now for Prabhumēru Śaka dates ranging about A D 900, but Vijayabāhu's friend Krishna-Rāja must have been the Rāshṭrakūṭa king **Krishna III** (about A D 950), of whom we know from other sources that he made and held extensive conquests in the South. The Ganga prince **Pṛithivī-pati II Hastimalla,** who received the title *Bānādhirāja* from the Chōla king **Parāntaka I,**[7] and whose inscriptions are dated in the 9th and 15th years of the same king[8] (i e A D 915 and 921), would thus have been a temporary usurper and a predecessor of Vikramāditya-Vijayabāhu. He was the Chōla king's candidate for the Bāna throne, while the legitimate ruler Vijayabāhu was the *protégé* of the Rāshṭrakūṭa invader. To facilitate reference, I subjoin a tabular statement of the two Bāna genealogies

Gudimallam plates	Udayēndiram plates	REMARKS
Nandivarman	Jaya-Nandivarman

[4] *South-Ind Inscr*, Vol III, Nos 47 and 48   [5] See above, Vol IX, p. 87.
[6] Above, Vol XI, p 228, and *Ep. Carn.*, Vol X, Mulbāgal Tāluk, No 229
[7] Above, Vol IV, p 225, verse 5   [8] *Ibid*, p 224, and *South-Ind. Inscr.* Vol II, p 389

rules of Sandhı are neglected ın *Nandıvarmmā ıtı* (l 19), *nrıparāt=bhuja-* and *prādāt=grāman=* (l 34), *chēt* (l 37), and °*bhyaḥ* (ll 39, 42 (twıce), 52) In -*nıpuṇaḥsh=shadguṇē* (l 30) and ın four other cases (ll 38, 40, 41 (twıce)) final Vısarga ıs expressed both by ıts orıginal form and by a sıbılant Consonants are doubled throughout after *r*, and before *y* and *r* ın -*maddhyē* (l 2), -*vıddhyud-* (l 3), -*vıddrā(ddru)ma-* (l 3), -*māttraṣ=* (l 5), *Ruddrō* (l 9), *Gırıttrēna* (l 33), and *pıttrē* (l 35), but not ın *traıvıdya* (l 41), *tsha(ksha)tra* (l 23), *putrēna* (l 32), *vēda-traya* (l 39), and *vıkrama* (passım) The superscrıbed *r* of double consonants ıs often omıtted through carelessness

After lengthy ınvocatıons of Śıva, whıch have already been notıced ın the precedıng remarks the ınscrıption ıntroduces the demon kıng Balı (v 9), who ıs stated to have been the son of Vırōchana, and to have granted the earth at a sacrıfice to Krıshna (ı e to Vıshnu ın hıs ıncarnatıon as a dwarf) One of Balı's descendants was kıng Nandıvarman (v 10 f.) Hıs son was Vıjayādıtya (v 12), hıs son Malla-dēva of the Bāna race (v 13), hıs son Jayamēru (v 14) alıas Vıkramādıtya (v 15), hıs son Vıjayādıtya (vv 16, 20, and l 44) alıas Prabhumēru (vv 17, 21), and hıs son Vıkramādıtya (v 20 and l 44) or Vıkramādıtyavarman (v 18)

According to verse 19 a kıng named Nanda[1] (who may be meant for the Nandıvarman of verse 10 f) had granted to Brāhmanas the vıllage called Vıprapītha With the sanctıon of hıs father (v 20 and l 45) Vıjayādıtya's son Vıkramādıtya granted protectıon (*raksha*), ı e a confirmatıon of the former grant, to the Brāhmanas of thıs vıllage (l 45), because he had obtaıned a boon from the god of the Parasurāmēśvara temple (l 43) In verse 21 f the donor, Prabhumēru's son, requests future kıngs to protect hıs grant Lınes 50-53 record the names of the composer and of the wrıter of thıs eulogy (*prasastı*) A postscrıpt ın Tamıl states that the revenue assessment (*puram*) of the vıllage amounted to 500 *kādı* of paddy and 10 (*kaḷañju* of) gold (l 53 f)

Before dıscussıng the hıstorıcal ınformatıon whıch ıs supplıed by thıs ınscrıption, I may state that Vıprapītha (v 19 and l 45) ıs clearly a Sanskrıt equıvalent of Tıruvıppırambēdu, the ancıent name of Gudımallam,[2] where the temple of Parasurāmēśvara (l 43) exısts to the present day

When my late frıend Venkayya wrote hıs learned artıcle on five Bāna ınscrıptions at Gudımallam, whıch was destıned to remaın hıs last contrıbution to the *Epıgraphıa Indıca* (above, Vol XI, pp 222 ff), no other genealogıcal ınscrıption of the Bāna dynasty was avaılable but the Udayēndıram plates publıshed by Kıelhorn (above, Vol III, p 74 ff) From the new plates we now learn that the kıng Prabhumēru of the Udayēndıram plates had also the name Vıjayādıtya, and that hıs father, who ıs called Bānavıdyādhara ın the Udayēndıram plates, had the two addıtıonal names Vıkramādıtya and Jayamēru These fresh facts may be used for locatıng ın the genealogıcal tree a few Bāna kıngs who are referred to ın other ınscrıptions A *vıragal* whıch was publıshed by Mr Rıce[3] belongs to the reıgn of Vıkramādıtya-Jayamēru alıas Bānavıjyā(dyā)dhara, and mentıons a mılıtary commander Prabhumēru who may be ıdentıfied wıth hıs son and successor Vıjayādıtya-Prabhumēru. Inscrıptions both of Vıkramādıtya-Jayamēru alıas Bānavıdyādhara and of Vıjayādıtya-Prabhumēru exıst also

---

[1] An early Rāshtrakūta kıng Nandarāja ıs supposed to be mentıoned ın the Multāı plates of Śaka 631 (*Ind Ant*, Vol XVIII, p 234), but the actual readıng of the plate (l 9) seems to be नब्राज In the Tıwarkhēd plates of the same kıng (above, Vol XI, p 279) the readıng ıs dıstınctly नब्नाज The genealogy of thıs Nannrāja ıs the same as ın the Multāı plates of Śaka 631, but the date of the Tıwarkhēd plates ıs Śaka 553, whıch would mean that Nannarāja reıgned at least 78 years (!)

[2] See Venkayya's remarks, above, Vol XI, p. 222

TRANSLATION.

(Line 1) Obeisance to Śiva ! Hail !

[Verses 1-7 are addressed to Śiva]

(Line 14) Obeisance to Śiva ! Hail ! Prosperity !

[Verse 8 is again addressed to Śiva]

(Verse 9) (There was) a powerful lord of demons (*Dānava*), Bali by name, the son of Virōchana   He presented at an excellent sacrifice the earth to Krishna of immeasurable lustre [1]

(Verse 10) In his lineage was born the best of kings, called Nandivarman, whose great power was praised.

(Verse 11) Victorious is that Nandivarman, whose pair of feet was kissed by the diadems, (set) with jewels, of princes.   Through him, who drove away (the sins of) the Kali (age), the earth is now (?) provided with a just king

(Verse 12) His son (was) a great hero, illuminating (the earth) as far as the coast (of the ocean), called Vijayāditya by name, the best of just rulers

(Verse 13) His (son) was the long-armed king Malla-dēva, the ornament of the Bāna race (and) the lord of the whole earth.

(Verse 14) To him was born the powerful great hero Jayamēru, the breaker of the circle of all enemies, (and) whose valour was inconceivable

(Verse 15) Let that king Vikramāditya be victorious, the lord of princes, whose orders were marked (*i e* bowed to) by the diadems of all rulers of the earth !

(Verse 16) King Vikramāditya had a very brave son, who bore the name Vijayāditya, (and) who uprooted proud enemies by (his) strong arm

(Verse 17) The renowned Prabhumēru knew the spell of five members[2], his thoughts were occupied with the six measures of politics; (and) his ministers were employed with polity.

(Verse 18) By his great wise son Vikramādityavarman, who propitiated Giritra (Śiva), (and) who removed distress, (this grant was made)

(Line 33) Moreover —

(Verse 19) The noble ruler of princes, Nanda by name, whose arms were powerful, (had) presented to chiefs of Brāhmaṇas the village called Viprapīṭha by name

(Verse 20.) But Vijayāditya's son, that virtuous lord who was celebrated (by the name of) Vikramāditya, granted a confirmation (of the former grant) to this (village), after having submitted (this matter) to (his) father

(Line 37) If (you ask) to what kind (of people) he granted the confirmation —to those who were abodes of prosperity (*padmā*), as Brahmā dwells on a lotus-flower (*padma*), who supported a circle (*chakra*) of virtuous men, as Nārāyana (Vishṇu) holds an excellent discus (*chakra*), who were beloved by bright welfare (*bhūti*), as Śiva is fond of white ashes (*bhūti*), who resided near (the temple of) Śiva, as Kumāra rests on Śiva's lap, whose mouths resounded with the recital of the three Vēdas, who practised in a suitable manner the conduct of

[1] *Cf* verse 3 of the Udayēndiram plates, above, Vol III, p 78

[2] *Viz* the five syllables *namaś=Śivāya*, "obeisance to Śiva ! " *Cf* ll 1, 14. [*Pañchāṅga-mantra* is ' counsel (consisting) of five subdivisions '; see Monier Williams s.v. *aṅga* —H K. S]

Parameshthin (Brahmā); who had advanced in (the study of) the three Vēdas', who had mastered all sciences, who (possessed) a series of gifts to Brāhmaṇas, who knew the (sacred) law, (and) whose draughts of Sōma were uninterrupted

(Line 43) Because he had obtained a boon from the god Paraśurāmēśvara, Vijayāditya's son Vikramāditya granted, at the direction of his father, the confirmation, accompanied by all exemptions (parihāra), to the chiefs of Brāhmanas residing in (the village) called Viprapītha.

(Verse 21) But the destroyer of enemies, that glorious son of Prabhumēru, requests all future rulers of the earth —

(Verse 22) "Let there rest for ever on my head the pairs of feet of those (kings) who protect this confirmation granted to chiefs of Brāhmanas!"

(Line 50.) This is the composition of Śivatama, son of Śiva-bhattāraka. Hail! To cows and Brāhmaṇas obeisance! This eulogy (praśasti) was written by Parahit-āchāri [1]

(Line 53) The revenue assessment[2] of this (village amounted to) five hundred kāḍi[3] (of) paddy and ten-(kalañju of) gold.

No 2 —TUMBAGI INSCRIPTION OF THE REIGN OF SATYASRAYA   SAKA 926
By Lionel D Barnett

Tumbagi, or, as the name was anciently spelt, Tumbige, is a village lying in lat 16° 34' and long 76° 20', in the Muddebihāl tāluka of Bijāpūr District, and formerly was included in the Pagalatti Three-hundred   The name is given as "Toombgee" on the Indian Atlas sheet 57 and as "Tumbgi" on the Bombay Survey sheet 350   It contains a monastery known as "Polayya's Maṭh," at the well of which there is (or was) a stone inscribed with the present record   A bad copy was made by Elliot's pandit, and appears in Vol I, fol 17a of the Elliot Collection (Royal Asiatic Society's copy)   I now edit the text from good ink-impressions prepared for the late Dr Fleet, which are now in the British Museum [4]—The stone is a long narrow block, with an upper compartment in front containing sculptures, viz in the centre a linga on a stand, with an upright figure of a votary facing it on the proper right of it, and still further to the right a cow with sucking calf   Underneath this is the inscribed area, which seems to include three faces of the slab   The first face, containing ll 1-17, is about 1 ft 1 in wide and 3 ft high, the second, containing ll 18-40, is about 10 in wide and 3 ft 7 in high, the third, containing ll 41—end, is about 3 ft 8½ in high and 6 in wide, except at the bottom, where it runs out towards the right to a width of 10¾ in, enclosing the last two lines —The character is fair Kanarese, somewhat inclined to angularity, with letters varying from 1 in to 1½ in in height   Its whole tendency is towards the later type, rather than the archaic   The cursive v is found only in the ligature rvva (ll 51,̄ 58) —The language is Old Kanarese, except for the concluding Sanskrit verses   We may note the sporadic change of m to v in -āchchhādanaiaʼn (l 32) and mahājanavuv= (ll 43-4), and the conditionals ādade (l 37) and appade (l 45), which all shew a tendency towards the medieval dialect

The record opens (ll 1-8) by referring itself to the reign of Akalankacharita Irivabedanga Satyāśraya (Dynast Kanar Distr, p 432), while his officer Setti Brahmayya was administering Tumbagi (ll 8-15), and registers gifts to local religious foundations by the latter and a lady named Āychakabbe, with rules for their management (ll 15 ff.).

---

[1] āchāri, 'an artisan,' is a Tamil form of āchārya

[2] Puravu occurs also in South-Ind Inscr, Vol. II, p 386, text line 99, and above, Vol. IV, p 224, text line
19   For its meaning see the Madras Epigraphical Report for 1920, p 96.

[3] The same measure is mentioned in South-Ind Inscr, Vol I, pp. 117, 140

[4] A notice of the inscription has been given by Dr Fleet above, Vol. XII, p. 306.

The date is specified on ll 11-15 as Śaka 926 (expired), Krōdhi ; Āshāḍha *amāvāsya*, an eclipse of the sun This is quite regular The Southern cycle is used, and according to the *Sūrya-siddhānta* (true system) the *tithi* quoted was connected with **Thursday, 20 July, A.D. 1004,** ending 3 h 33 m after mean sunrise (for Ujjain) On that day there was an eclipse of the sun at 3 h 18 m after sunrise by Laṅkā time Mr R Sewell, who has kindly examined this date at my request, remarks that by the true system of the *Ārya-siddhānta* the result is the same, but that by the mean system of the *Ārya-siddhānta* the *tithi* was connected with the previous **Wednesday, 19 July**

The place-names mentioned are : the Pagalatti Three-hundred (l 10), the Tumbige Agrahāra (l 11), and Kalkere (ll 23-4) On Pagalatti I may refer to the remarks of Dr Fleet above, Vol XII, p 306 ff, where he identifies it with the district variously called Hagariṭige, Hagariṭṭage, or Hagaratage and connected with the village formerly designated Hagaritage, Hagaliṭṭage, or Hagariṭṭage, and now known as Hagarattagi, Hagariṭige, Hagariṭṭige, or Hagariṭṭigi, in the Shōrāpūr *tāluka* of Gulbarga District in the Nizam's Territories Kalkere cannot be identified with certainty, there are several places of the name.

TRANSLATION.

(Lınes 1-9) Settı Brahmayya, who finds sustenance at the lotus-feet of—haıl !—the refuge of the whole world, darlıng of Fortune and Earth, great Emperor, supreme Lord supreme Master, ornament of Satyāśraya's race, Akaḷankacharıta Irıvabedanga Satyasrayadēva —

(Lınes 10-23) (*While governing*) the Agrahāra of Tumbıge, formıng part of the Pagalattı Three-hundred, durıng the last lunar day of Āshādha in the cyclıc year Krōdhı,

---

¹ Read 5 tapasvıyargge.   ² Read shashtır=varsha-.

the 926th (*year*) of the Śaka era, during an eclipse of the sun, Setti Brahmayya granted for the god Brahmēśvara a field, 200 *mattar*,   for the drummers and public women he granted a field, 30 *mattar*, for the monastery he granted a field, 50 *mattar*, for the benefit of the temple he granted a field, 120 *mattar*.

(Lines 23-29) Āychakabbe, daughter of Gennayya of Kalkere, granted for the monastery out of her own honorary estate a field, 50 *mattar*. Thus (*there are*) for the monastery 100 *mattar*

(Lines 29-47) Likewise out of the revenues of this land they shall provide food and clothing for the 5 ascetics living in celibacy. In the case of any superiors of this place, if there should be committed a breach of celibacy or the like in conducting the highest offices, they shall expel (*them*)[1]. The leading men shall be such. They shall preserve this pious foundation, under this constitution. If the mayors of the town and the burgesses should have neglected it, guilt shall accrue to them. Any person, whether of the mayors of the town or of the burgesses, who should violate this constitution or any other constitution, (*will become*) a dog, an ass, or a Chāndāla, an outcast from society

(Verses 1 and 2   Sanskrit formulæ)

(Line 70)   Happiness ! great fortune !

No 3—A NAGA FIGURE IN THE MATHURA MUSEUM

By Y R Gupte, B A

On page 18 of the Annual Progress Report of the Archæological Survey of India, Northern Circle, for the year 1908-1909 an inscribed pedestal from Rāl (No 45) is mentioned The upper part of the image must have been found since I examined the sculpture at Mathura. It represents a Nāga standing between two Nāgīs. The height of the sculpture is 4' 2'. The inscription measures about 2 ft in breadth and 7 in in height

The image came from a mound near the village of Bhadāl about six miles from Mathura. From local enquiries it appeared that people from the neighbouring villages used to visit the spot and vows were made to the deities by barren women. When they got sons, they resorted to the place for tonsuring their hair

The Nāga in the centre has a canopy of seven hoods with forked tongues, as is usually the case with the other Nāga images of Mathura, and is similarly dressed. The threefold triangular necklace is a little damaged on the breast. We can see the bracelet on the right wrist, and a similar one on the left is hidden by the upper garment. The position of the hands is similar to that of the Nāga figure from Mathura city of the Kushāna year 52 (*A S R* for 1908-9, Plate LIV). The left hand holds a small vessel; and a lotus bud is visible in the right. The Nāgīs are dressed in garments of the same stuff as the Nāga and have the same appurtenances in their hands. Beneath the feet of the deities were short inscriptions, now much defaced, which probably contained their names. The vestiges that remain favour this view.

On the pedestal are five males and five females and also two boys with folded hands. They are worshippers. The right hand of the man to the extreme proper right is gone. The male to the left and the female to the extreme proper left have their hands folded, the others holding lotus stalks in their right hands. On the lower part of the pedestal is an interesting inscription

---

[1] [*Uttamāgram* means 'sumptuous meal', see *South Indian Inscriptions*, Vol III, Part III, p 256, footnote
1. (The meaning is One of the superior members of these will be provided with a sumptuous meal'.—H. K S]
From a photograph kindly supplied by Mr H Hargreaves

SCALE ONE-SIXTH
of three lines, of which the second and third are much damaged, making the decipherment of a part of the third line impossible

Several images of Nāga deities, both inscribed and without inscriptions, have been found in Mathura   Of these the following are dated —

Image of Dadhikarna, of Samvat 26 va 3 di 5 (*Ind Ant*, Vol. XXXIII, p 102, and *Ep Ind*, Vol I, pp 380 f and 390, No. XVIII, and Dr. Vogel's paper in the *Arch Survey Report* for 1908-9, pp 159 ff)

Nāga image of the year 40 of Huvishka, in the second month of winter, the 23rd day (Dr. Vogel's catalogue of the Arch Museum at Mathura, No. C 13, pp 88-9 , *A S R.* for 1908-9, p 161)

Nāga image of sa 52 va 3 di 25 (Dr Vogel's catalogue of the Arch. Museum at Mathura, p. 91), *Arch Survey Report* for 1908-9, p 161

Besides, there is a fragment which Dr Vogel assigned to the 3rd century of the Christian era (Dr Vogel's catalogue of the 'Arch Museum at Mathura, p ˙90 , *A. S. R* for 1908-9, p 162)

The image described in this note dates from the year 8 of the Kushāna era and is the earliest dated Nāga one at Mathura

The palæography does not call for many remarks. The general characteristics are dealt with in Dr Bühler's *Indian Palæography*, edited by Dr J F Fleet, p 41. The peculiarities observable in the present inscription are these —(1) The *kha* is triangular below, but its hook is large , (2) the upper horizontal stroke of *ra* is turned into a curve, while the lower is split up into lines ; (3) *ta* in the 3rd line shows a loop , (4) the lower part of *da* is more slanting than in all examples given by Dr Buhler , (5) *va* is rounded on the left , (6) the left limb of *sa* is never turned into a loop

(1) There can be little doubt about the reading *Svāmi-nāyasya*   I have examined the stone in all lights and shades   (2) *Hi* and *su* at the end of the third line stand for *hita-sukhārtham*. This abbreviation is due to want of space

<div align="center">TRANSLATION.</div>

In the year 8 of the great king, the king of kings the Shāhi Kānikkha in the fourth (month of) summer, on the 5th day on that (date specified as) above, a tank and a garden of the holy Bhūmi naga was founded   .   .   .   . °tura, son of . for the welfare and happiness of all sentient beings

The Prākritized form *Kānikkha* deserves notice   The form with the long *ā* in the first syllable has already been observed in two inscriptions, namely those on the statue of Kānishka

---

¹ From the original
² It appears that the engraver first cut *sya*, but afterwards found out his mistake and deeply engraved only *sa*.

himself and the Bodhisattva statue of the Kushāṇa year 3, in the Sārnāth Museum   Bhūmināga
is first met with in this record.

No 4 —A VAKATAKA INSCRIPTION FROM GANJ.

By V S Sukthankar, Ph D

This inscription, which is now brought to notice for the first time, was discovered by my
friend Babū Rakhaldas Banerji, Superintendent, Archæological Survey of India, Western
Circle, in 1919, during one of his tours of inspection in Central India   The excellent estampages
from which the accompanying blocks have been prepared were made under his direct supervision,
and very kindly placed by him at my disposal for publication

The inscription, Mr Banerji tells me, is engraved on a detached slab of stone which he
found lying at the bottom of a *dongā*, adjoining a hill called Maluhā-ṭongi near Ganj in the
Ajayagaḍh (Ajaigarh) State in Bundelkhand   Close by is a ruined stone structure, probably a
dam to hold the waters of the stream passing along the *dongā*   The find-place of the record is
not far removed from the ruined city of Kuṭhārā, where Cunningham discovered in 1883-84
the Nāchanē-kī-talāi inscription, which was first brought to notice by him, in 1885, in *Archæo-
logical Survey of India*, Vol XXI, pp 97 f , and re-edited by Fleet in *Gupta Inscriptions*,
pp 233 ff and Pl xxxiii B   The Ganj inscription, like the one discovered by Cunningham, is
one of the oldest records of the Vākāṭaka dynasty, and as such is worthy of being carefully
preserved

From the subjoined transcript it will be seen that the text of our inscription is practically
identical with that of the Nāchanē-kī-talāi record of the reign of *Mahārāja* Pṛthivishēṇa, edited
by Fleet in *Gupta Inscriptions*, it differs from the latter only in the length and the number of
lines, and in the spelling of a couple of words   But our inscription is in a much better state of
preservation than that edited by Fleet, at all events the stone has yielded an impression far
superior to the one from which the block accompanying Fleet's article was prepared   Conse-
quently we can study the forms of the letters in the subjoined facsimile much better than in
that of the Nāchanē-kī-talāi version   Moreover, the writing of this inscription being perfectly
distinct, we can give a transcript which is more reliable, and which at the same time discloses
certain minor inaccuracies in Fleet's transcript, errors which even then could have been avoided
by a more patient study of the available material.

The writing covers a space about 25″ broad by 12″ high   In the centre of the first line
of the inscription there is a sculpture of a wheel, of which only a part is visible in the facsimile
The average size of such letters as m, p and v is about 2″ —The characters belong to the
'southern' variety of alphabets, of which the distinguishing features, in our inscription, are
the hooks at the lower ends of the verticals of l and r In particular, we may say that the letters
are a specimen of the Central Indian alphabet of the period, which on account of the peculiar
'box-headed' tops of the letters is known as the 'box-headed' sub-variety of the southern
alphabet [1]   In our specimen the boxes are very conspicuous, and uniformly hollow.   The letters
are unequal in size and uncouth in appearance   It may be added that they betray a conscious
effort to substitute angles for curves in the configuration of letters   The letters t and n are
sharply distinguished from each other· the latter has always a knot at its lower end.—The
language is Sanskrit, and the inscription is in prose —As regards the orthography the only
point calling for remark is the phonetic doubling of the d of dh, in °d-$ā(m)n\d{u}ddhyāto$° (1 2),
before y, and of the t of th, before r, in *punyā-rtthē* (1 3).

---

[1] See Bühler, *Indische Palæographie*, p. 62.

1. A Vakataka Inscription from Ganj.

2 Mandagappattu Inscription of Vichitrachitta
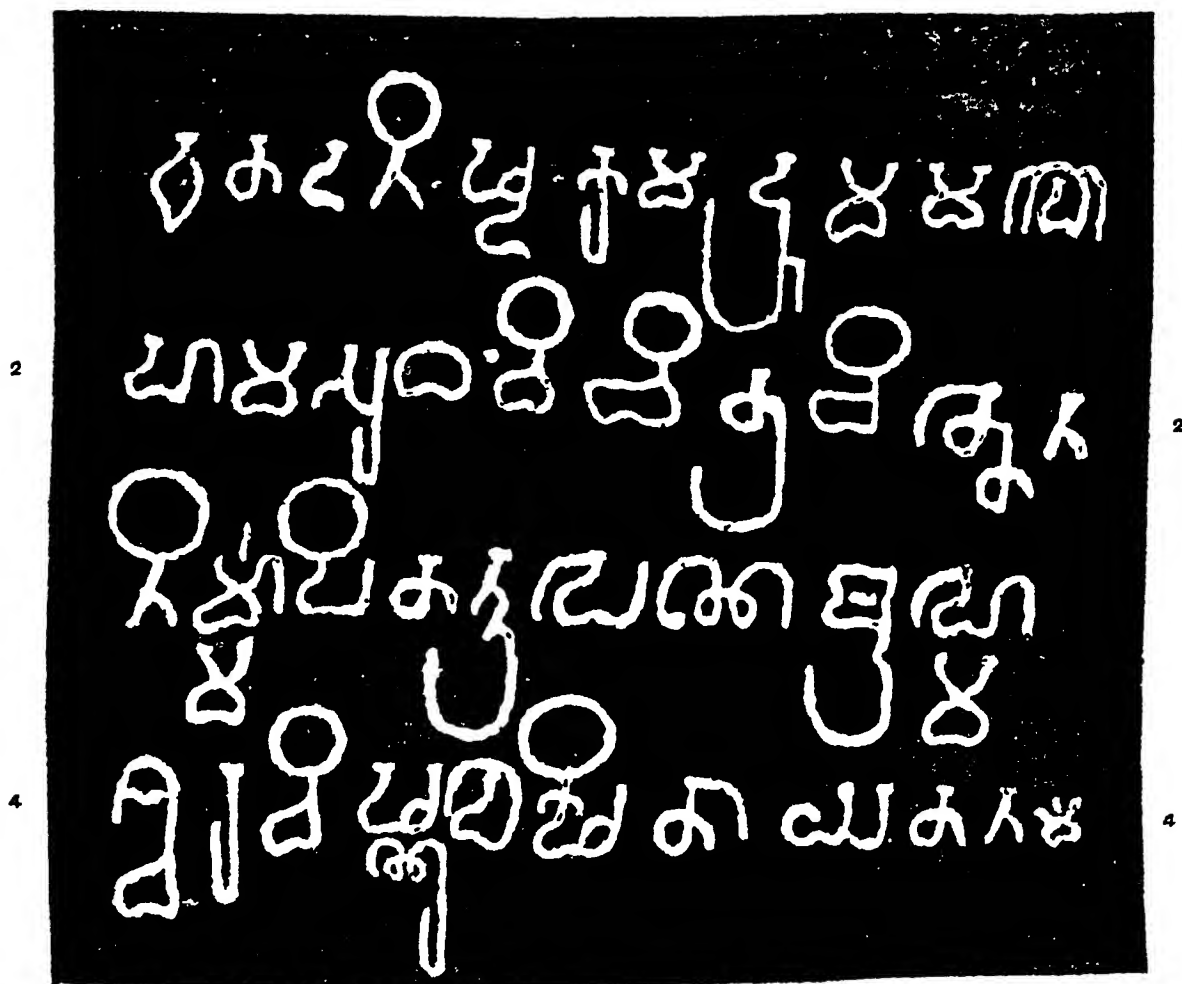

The inscription, which is a record of the reign of *Mahārāja* Pṛithivīshēṇa [I] of the Vākāṭaka family, states merely that a feudatory of his, Vyāghradēva by name, had made something or other for the sake of the religious merit of his parents   The exact nature of this act of piety has been left unspecified, just as in the other version discovered by Cunningham   The silence of these records on the point leads us to infer that the slabs on which the inscriptions are inscribed must have been built into that the making of which they were intended to record

Our information regarding the Vākāṭaka dynasty is unfortunately very scrappy   All the important events in its history known to us have been succinctly summarized by Kielhorn[1] in his article on the Bālāghāt plates of Pṛithivīshēṇa II , we can even now add nothing of consequence to what has been said there.   We do not possess exact dates for any of the kings of this family, nor can we form any clear idea of the extent of the country ruled over by them   Regarding Pṛithivīshēṇa I we know that he was the son of Rudrasēna I and the great-grandson of Pravarasēna I, the latter being either the very first king or one of the early kings of this house   It should seem that the Vākāṭaka king at whose hands the 'lord of Kuntala' had suffered defeat, as recorded in the Vākāṭaka stone inscription at Ajaṇṭā,[2] was this same Pṛithivīshēṇa.   Beyond these few facts we know nothing of much consequence regarding the king referred to in our record

About Vyāghradēva, the feudatory of Pṛithivīshēṇa, we know still less   Indeed, Vyāghra appears as the name of chieftains in several well-known inscriptions,[3] but it is not possible to identify our Vyāghradēva with any of them

Bühler[4] assigns the copper-plates of the Vākāṭaka Pravarasēna II., the grandson of Pṛithivīshēṇa I, to the fifth or sixth century A D , it is not known to me on what grounds   I have examined the inscriptions of the Vākāṭaka dynasty and compared them with the allied inscriptions engraved during the time of the Guptas,[5] of the kings of Śarabhapura,[6] of Tīvara,[7] of Kōsala and of the early Kadamba kings,[8] without being able to arrive at any definite conclusion regarding the age of the Vākāṭaka inscriptions.   Bühler's date, however, appears to me to be far too early   My impression is that there can be no objection, on palæographic grounds, to assigning this record of the Vākāṭakas to as late an epoch as the seventh century A D.   I conclude this short notice by drawing attention here to the remark of Kielhorn that the Bālāghāt plate of Pṛithivīshēṇa II, who was the son of the great-grandson of the Pṛithivīshēṇa of our inscription, "may be assigned with probability to about the second half of the eighth century A.D "[9]

TEXT.[10]

[10] From a set of estampages prepared and kindly lent to me by Mr R D Banerji
[11] Read *Vākāṭakānām*   Fleet in his transcript has wrongly spelt this word with the dental *n* in *Gupta Inscriptions*, Nos 53 54
[12] Read *śrī*
[13] Read *puny ārtthē*.   Here also Fleet has wrongly transcribed the word, both as regards the dental *n* and the case ending   In Cunningham's version the word is spelt exactly as here.
[14] The construction is faulty   The verb should be in the active voice.

TRANSLATION.

Vyāghradēva, who meditates on the feet of the *Mahārāja* the illustrious Pṛithivishēṇa, (of the family) of the Vākāṭakas, has made (this) for the sake of the religious merit of (his) parents.

No 5.—MANDAGAPPATTU INSCRIPTION OF VICHITRA-CHITTA
By T A Gopinatha Rao, M A, Trivandram

The small village of Mandagappaṭṭu is situated in the Villupuram *Tāluka* of the South Arcot District and is about five miles south-west of Pēranai, a station on the main line of the South Indian Railway   In a small hill near Mandagappaṭṭu is cut out a shrine, on the façade of which is engraved the inscription which is edited below.   The shrine has at its back end three niches, which are dedicated to the gods Brahmā, Īśvara and Vishnu respectively   On the panels on either side of this shrine is carved a *dvāra-pālaka* ; the figure on the right very much resembles those which are found in the rock-cut shrines attributable to the Pallava king Mahēndravarman I.   From this and other considerations based upon its architectural peculiarities Mons G Jouveau-Dubreuil has attributed its excavation to Mahēndravarman I   A photograph of the front view of this rock-cut shrine is given by him in his *Pallava Antiquities*, Vol I, Pl XXVIII   The cave was visited by the staff of the office of the Madras Epigraphist, and the inscription was copied in 1905   Regarding this cave Mr. Venkayya wrote in his *Annual Report on Epigraphy* for that year thus :—" The cave at Dalavāṇūr in the Tindivanam *Taluka* consists of a shrine and a *mandapa* in front of it, thus resembling to a certain extent the upper cave at Trichinopoly, while that at Mandagappaṭṭu (mentioned in Mr Sewell's *List of Antiquities*, Vol I, p. 209) is a smaller one, which looks as if it had been left unfinished   .   .   .
There is only one inscription in the Mandagappaṭṭu cave, which is so much damaged that the name of the king cannot be made out.   To judge from what remains of it, we may say that it must also belong to the Pallava period   And, as we know that it was Mahēndravarman I of that dynasty that excavated almost all the hitherto known monolithic caves in the Tamil country, we may not be altogether wrong, if we suppose that the one at Mandagappaṭṭu also came into existence during his reign "   Depending upon probability, Mr Venkayya hazarded a guess which has now turned out to be quite correct   It is true that the shrine was excavated during the reign of Mahēndravarman I , but no serious attempts were made by the Madras Government Epigraphists at deciphering this epigraph   The credit of having made out the name of the king belongs to the French Professor, Mons G Jouveau-Dubreuil, of Pondicherry   He has visited Mandagappaṭṭu more than once to obtain eye-copies and mechanical impressions, as also to acquire any further knowledge by studying the inscription directly from the stone   His zeal and perseverance have been richly rewarded by his discovery of the name of the king in whose reign the shrine was excavated   At this stage he sent me the impression of the inscription and his eye-copy, so that I might complete the reading of the document, translate and annotate it.   When my notes, translation, etc, went to him, it had become impossible for him to edit the inscription himself, for he had to proceed to Cochin China on military duty   He therefore sent me a good photograph of a very carefully prepared eye-copy and asked me to edit the epigraph as early as possible   From the mechanical impression kindly lent to me by Mons Jouveau-Dubreuil and the photograph of the eye-copy prepared jointly by me and that gentleman I edit this important inscription below

The record consists of four lines of writing in Grantha characters of the first half of the 7th century A D , and is a Sanskrit verse in the *Gīti* metre   As has been remarked by Messrs. Venkayya and Jouveau-Dubreuil, the inscription is somewhat badly damaged, and it is only with difficulty that one can read it successfully, but one need not on this score imagine that the

reading is fanciful   The inscription states that the shrine was caused to be made by the king Vichitra-chitta for the accommodation of the three deities Brahmā, Īśvara and Vishnu, without using in its construction bricks, timber, metal or mortar   This short record is of importance in more ways than one   The most important information conveyed by it is that before the time of Vichitra-chitta bricks, timber, metal and mortar were the common temple building materials   Evidently the basement and walls of the buildings were of brick work, plastered with chunam, and the superstructures were composed of wood work held in position by the use of metallic nails and bands   This, in fact, is even to this day the mode of construction of temples on the Malabar Coast   It is difficult to find a single temple in Southern India which belongs to a date prior to the 7th century of the Christian Era   One would naturally be inclined, therefore, to surmise that temple building was never in vogue before that century   But immediately after this period we see a number of temples which have sprung into existence, and this also seems to lend weight to the surmise that no temples were built before the time of Mahēndravarman I in Southern India   The statement made in this inscription that Mahēndravarman did not employ bricks, timber, metals and mortar clearly warrants us in drawing the conclusion that the temples built before his time were all of such easily perishable materials as bricks, etc, that they were all ruined in course of time, and that this is the first rock-cut shrine of his   This is clear from the special mention of *anishtaka*, etc, in the case of this shrine   It is impossible for a number of temples to have come suddenly into existence from the beginning of the 7th century, unless the building of temples had been practised long before

We know from the inscriptions of the cave temple at Pallāvaram that Vichitra-chitta was one of the *birudas* of Mahēndravarman I (see Pl XXI in the *Pallava Antiquities* of Mons G Jouveau-Dubreuil, wherein the name Vichitra-chitta is clearly legible, *vide* also for the *biruda* Vichitra-chitta, p 74, para 14, of *Ep An Rep* for 1909). It is, therefore, patent that the shrine was caused to be excavated by Mahēndravarman I

Again, the *biruda* Vichitra-chitta means 'the curious or inventive-minded one'   One can easily concede to the king Mahēndravarman the title 'inventive-minded,' in so far as he avoided bricks, etc., commonly used by all in the construction of their buildings, and devised quite a new path, namely the cutting out of rock-temples, which needed neither bricks, timber nor mortar   His country extended far north of the river Krishnā, where he must necessarily have seen some of the earlier rock-cut temples and so have introduced into Southern India the new style of cutting temples in rock.   That he was the first to introduce into Southern India the method of excavating temples in the solid rock is certain; for we do not find even a single rock-cut shrine which belongs to a time before the reign of Mahēndravarman   We know of no less than fifty rock-cut shrines in Southern India, not one of which is earlier than the time of this Pallava king   In fact, the art of cutting temples out of rock was contemporaneous with the Pallava dynasty and disappeared after them [1]

The *birudas* of Mahēndravarman are not mere boasts, each of them has a meaning which is based upon some act done by him   We have seen that the *biruda* Vichitra-chitta is assumed by him for his invention of a new method of raising temples   Similarly, the *biruda* Matta-vilāsa is, in fact, indeed due to his having composed the pleasant little burlesque the *Mattavilāsa-prahasana*, in which he ridicules an actual *matta* or madman, a drunken Kāpālika and meat eating Bauddha Bhikshu [2]   Mention is made of this burlesque in his inscription found in Māmandūr,

---

[1] [See *South-Indian Images*, Introduction, pp 1 f —H K S]

[2] The following extracts from this work will show that it was the composition of Mahēndravarman

सूत्रधार —भवति ¹ श्रूयताम् । पल्लवकुलघरधिसच्छकुलपर्वतस्य सर्वनयविजितसमस्तसामन्तमण्डलस्य आखण्डल-समपराक्रमधियः श्रीमद्चिमातृपदानविभूतिपरिभूतराजराज्ञस श्रीचित्रविष्णुवर्मण. पुत्र. यतुपण्डूर्गनियहपर परस्त्रितयपरतन्त्रतया महामूतसधर्मा महाराज श्रीमदेन्द्रविक्रमवर्मा नाम ।

The *birudas* Avani-bhājana, Guna-bhara, Matta-vilāsa and Satra-malla are also introduced ingeniously in the play , these, we know, are the *birudas* of Mahēndravarman I.

the portion where it occurs is somewhat damaged, but the name of the work is not broken, the passage runs thus *Mattavilāsādi-padam=prahasan-ōttamam*[1] and in the other fragments of the inscription we see that mention is made of poets like Vyāsa and Vālmīki, as also of *tālas*, etc, of music   Thus then each *biruda* of Mahēndravarman appears to have been bestowed on him or assumed by him for some ostensible reason   The *biruda* Sankīrna jāti[2] of this king is rather curious, it means 'of mixed caste.' Perhaps the parents of Mahēndravarman were of different castes.   The significance of the other *birudas* will become patent as further researches are made

It is interesting to note that at the time of Mahēndravarman the three deities Brahmā, Śiva and Vishnu were enshrined together in the same temple in adjacent niches   Such a group consisting of Brahmā, Vishnu and Śiva is called Hari-Hara-Pitāmaha or Dattātrēya   (See my *Elements of Hindu Iconography*, Vol I, pp 251-256, as also Pl LXXII, fig. 1 of the same volume)   At Mahābalipuram also there exists a Trimūrti cave, but, strangely enough, the cell which is supposed to have been dedicated to Brahmā is occupied by a figure which has only one face   The figure of Brahmā ought, according to the *āgamas*, to be always shaped with four faces, and in practice also we find that three faces are always shown in sculpture, the fourth being supposed to be at the back of the figure   In spite of the fact that the figure in the Mahābalipuram rock-cut shrine has only one face Dr Vogel in his *Iconographic Notes on the Seven Pagodas*, contributed to the Director-General of Archæology's Annual Report for 1910-11, identifies the figure with Brahmā (see page 58)   Prof Jouveau-Dubreuil has sent me a note containing his own explanation concerning this image for publication here, which I reproduce below   "The Trimūrti cave at Mahābalipuram is formed of three cells, the one on the right contains an image of Vishnu, and the middle one an image of Śiva   It is, therefore, but natural to suppose that the left cell contains an image of Brahmā   I was the first author to remark (vide *Archéologie du Sud de l'Inde*, Vol II, Pl XVIII B) that the god in the left cell has only one head and so could not be identified with Brahmā   I have thought fit to affirm that this unknown god is Subrahmanya, who is represented also on the ground-floor of the Dharmarāja Ratha[3] (*Archéologie du Sud de l'Inde*, Vol II, Pl XVIII B)   However, the problem why the trinity Subrahmanya, Śiva and Vishnu is found in place of the usual trinity Brahmā, Vishnu and Śiva has remained till now unsolved   I believe I shall be able to explain why Subrahmanya is substituted for Brahmā in the group of the trinity at Mahābalipuram   Mr. T A Gopinatha Rao says in his *Elements of Hindu Iconography*, Vol II, Part II, page 439, 'Brahma-śāstā : This is the aspect of Subrahmanya in which he put down the pride of Brahmā by exposing his ignorance of the Vēdas   He should be represented with a single face and four arms; he should have only two eyes   In the back hands there should be the *akshamālā* and the *kamandalu*,[4] and the front hands should be held in the *varada* and *abhaya* poses   The colour of Brahma-śāstā should be the red of the lotus flower'   If we note that the image of Subrahmanya in the Trimūrti cave wears on its breast a double chaplet of *rudrāksha* beads, and that at the entrance to the sanctuary there are two personages dressed as Sannyāsins and having pointed beards, we shall conclude that the sculptors of Mahābalipuram have put Subrahmanya in the place of

---

[1] This fact was also discovered by Prof Jouveau-Dubreuil   see his *Pallavas*, p 38
[2] [*Sankīrnajāti* is the name of a variety of musical time   Perhaps Mahēndravarman I held this *biruda* as an inventor of this method of keeping musical time.—H. K S]
[3] Behind the rock bearing the Trimūrti shrine are executed the figures of a peacock, an elephant and a monkey, carved in half relief   We know that the peacock is the characteristic vehicle (*vāhana*) of Subrahmanya. The elephant is generally associated with the temple of Sāstā, and is here perhaps intended to show that the image is that of Brahma sāstā   [Temples of Traipurushadēva are found dedicated to Sun, Śiva and Vishnu. Why should not the Brahma sāstā figure represent the Sun ?—H K S]
[4] Dr Vogel takes the objects in the back hands as a flower and a ring, neither of which is right. The hands carry only a *kamandalu* and an *akshamālā*, as required by the *āgamas*.

Brahmā because they have placed there Brahma-śāstā, a deity superior to Brahmā in his knowledge of the Vēdas   I think fit to draw attention to the existence of the trinity consisting of Subrahmaṇya, Śiva and Vishṇu and also to explain it with the help of the above-mentioned excellent work of M R Ry T A Gopinatha Rao "[1]

TRANSLATION.

This brickless, timberless, metalless and mortarless temple, which is a mansion for (the Gods) Brahmā, Īśvara and Vishnu was caused to be created by the king Vichitra-chitta.

No 6—THE FIRST ARYA-SIDDHANTA.
MEAN SYSTEM
(A continuation of the author's " Indian Chronography ")
BY ROBERT SEWELL, I C S (RETIRED).

303 It has long been known that in earlier years the Pañchāng Brahmans in India framed their local almanacs on calculations made by the use of the mean, as opposed to the true or apparent, motions of the sun and moon   The change from the mean to the true systems of calculation was advocated by Śrīpati (A D 1040), and the latter system may have been adopted in some places about that time, becoming more general from about A D 1100 onwards India, however, is a very conservative country, and the late Dr Fleet was of opinion that the mean system may have been adhered to, in some tracts at least, till a far later date

304 With this opinion in mind I have prepared the Tables which follow, so as to cover the period of nine centuries from Āryabhaṭa's date, K Y 3600 (A D 499-500), to 4500 (A D 1399-1400)   It would be well if all dates of inscriptions that have hitherto been set aside as irregular by epigraphists could be re-examined, seeing that the difference between the two systems of the *Ārya Siddhānta* constantly leads to differences in the computed positions of the sun and moon on the same civil day, and consequently to differences in the almanac, let alone the differences caused by the use of different Siddhāntas

Thus, to give an example   The civil day, Monday, 21 October A D 1090, was by the Ārya Siddhānta true system described as "Monday, 25 Tulā, nija Āśvina kr 10," while by the mean system it was "Monday, 27 Tulā, Kārttika kr 10"   Thursday, 31 Oct, in the same year was by the true system "Thursday, 5 Vṛśchika, Kārttika śukla 6," while by the mean system it was "Thursday, 7 Vṛśchika, Mārgaśira śukla 5"

305 The present Tables are based on the First Ārya Siddhānta as amended by Lalla   The principal Table LXXVI is framed on the lines of the *Indian Calendar*, Table I, so as to meet the convenience of epigraphists who have become accustomed to the use of that work   The numbers of the columns are made to correspond in both Tables

Results of calculation carried out by the present Tables will be found to correspond with those worked by use of Professor H Jacobi's skeleton Tables published in Vol XI above There is no need for me to dwell on the great services he has rendered to the cause of Indian history and epigraphy   These are well known   All I have done is to follow in his footsteps,

---

[1] This note is reproduced here exactly as it was sent by Mons G Jouveau Dubreuil, no corrections have been effected in it

[2] [For Plate see the article on ' A Vākāṭaka Inscription from Ganj.'—F W T]

verify his figures to the best of my ability and apply the results to practical use. Any little differences that exist between us have been fully set forth and their cause explained

Elements   Ārya Siddhānta, mean system

306 (i) The length of the mean sidereal solar year is 365^d 6^h 12^m 30^s, or 365^d 2586805

(ii) For the sun's mean motion per day, hour, etc., see Tables XLIII, XLIV, above, Vol XIV

(iii) The distance of mean moon from mean sun (our a), measured in 10,000ths of the circle, i e 10,000ths of the mean synodical revolution of the moon and excluding 12 whole revolutions, increases, during one sidereal solar year, from 0 to 3688·231484714 That is the advance of a in the year   Table LXIV A above, col 3, shews this advance per day, and Table LXV the advance per hour, etc.

(iv) The value of a in mean reckoning corresponds to that of t, the tithi-index, in true reckoning It shews what mean tithi was current at the moment in question[1] In general calculation by the Tables this moment is the moment of mean sunrise at Lankā, taken as 6 A M

(v) In reckoning by 10,000ths of the circle the advance of a in one mean solar month is 307 352623726

(vi) Each mean solar month consists of 30^d 10^h 31^m 2½^s The collective duration from the moment of mean Mēsha-samkrānti (the beginning of the mean solar year when the mean sun is at celestial long 0°) to each separate samkrānti, or the moment when the mean sun enters each of the signs, is given in Table LXXVII

(vii) The length of each mean lunar month is 29^d 12^h 44^m 2^s 79 or 29^d 530587946, during which the mean moon's distance from mean sun increases, in our circle reckoning, from 0 to 10,000   The length of one mean tithi, or one-thirtieth of the mean lunar synodic month, is 23^h 37^m 28^s 09, or 0^d 984352931, during which, in circle reckoning, the increase of a is 333 $\overset{\cdot}{3}$

(viii) The sōdhya, or time-difference between the moments of arrival at celestial long 0° of the true and mean suns, which moments are known respectively as the true and mean Mēsha-samkrāntis, is 2^d 3^h 32^m 30^s, true Mēsha-samkrānti being the earlier

The time of occurrence of mean Mēsha-samkrānti in every year is given in Table LXXVI, cols. 13 to 17

(ix) The samvatsara name of the solar year is the same by both true and mean reckonings, except in the years A D 564-5, 905-6, 990-1, 1246-7 and 1331-2, A special footnote is appended to the main Table LXXVI in each case

(x) There can be no suppression of a lunar month when calculation is made by the mean system, for the length of a mean solar month is greater than that of a mean lunar month, so that two mean solar samkrāntis cannot take place within the limits of one mean lunar month

(xi) Let it be noted that no intercalation of a lunar month can take place unless, at mean sunrise of the day on which mean Mēsha-samkrānti took place, the value of a is more than 6280 4892, or unless at the moment of mean Mēsha-samkrānti the value of a is more than 6619 1211, the latter value being 10,000 — 3380 8789, the total increase of a from Mēsha- to Mina-samkrānti, and the former being 6619 1211 — 338 6319, the latter value being the increase of a in 24-hours

The 19-year intercalation cycle

307 (See Indian Calendar, § 50, p 29) By the mean system the cycle-sequence is found to work with almost perfect regularity After four successive intercalations at intervals of 19 years each the intercalated lunar month gives way to the month preceding it But there are

---

[1] The equations of sun and moon are not taken into account in mean reckoning.

two exceptions in the nine centuries, embraced in Table LXXVI. Between A.D. 751 and 827 there is a run of five intercalary mean Pausha months, and between A.D. 1242 and 1318 there is a run of five intercalary mean Âsvina months.

In eleven instances the names of the mean intercalary months given in Table LXXVI differ from those stated in the *Indian Calendar.* These differences are due to the former calculations having been based on Professor Jacobi's earliest Tables published 30 years ago, while the present ones agree with the results of calculation made by his more recent elementary fixtures. Each difference is specially noted at foot of Table LXXVI.

The nakshatra.

308 In the mean system the position at any moment of the mean moon in the ecliptic circle, i.e. the mean moon's nakshatra, is found by adding her mean distance from the mean sun to the latter's longitude, that is to say, by adding to the value of s (the mean sun's longitude) the value of a at the same moment as found by calculation for the mean tithi. All work by the Tables being in the first instance for the mean positions of sun and moon at mean sunrise of any day, Table LXXX provides the sun's mean long., s, in 10,000ths of the circle, for each period of 24-hours measured from the moment of mean Mêsha-samkrânti, while Table LXXXI states the same increase for fractions of the day. To obtain the value of s for mean sunrise of any day it is necessary to note first its value after the interval of days between the day of Mêsha-samkrânti and the given day (Table LXXX), and, since that value is measured from the moment of Mêsha-samkrânti and not from mean sunrise, afterwards to deduct from the value so obtained the increase during that fraction of the day (Table LXXXI). The result is the required s, or the mean sun's long. at mean sunrise of the given day. Then $s+a=n$, the nakshatra index required, or the mean moon's place in the ecliptic circle at mean sunrise of that day.

The Rule for work, then, is as follows. Find the value of a $(=t)$, the mean tithi-index at mean sunrise of the given day (*Example 2 below*). Note the serial number of the day as measured from Jan 1. Deduct from this the serial number of the day of mean Mêsha-samkrânti (*Table LXXVI, col 13, in brackets*). This gives the number of intervening days. Turn to Table LXXX and note the value of s against that interval of days. Deduct from this the mean sun's movement given in Table LXXXI during the hours and minutes stated in Table LXXVI, col. 17. The result is the required value of s at mean sunrise of the given day. Add s to a. This $=n$, the required nakshatra-index. Table LXVIII above, or Table VIII, *Indian Calendar,* gives the name of the nakshatra.

The Tables.

309. Table LXXVI corresponds to Table I *Indian Calendar* in formation and is to be used in the same way. Here the value of a is the value of t. It gives the tithi-index direct without further calculation.[1]

Table LXXVII shews the duration and collective duration of mean solar months, and the increase in the moon's phase, a, during each such month.

Table LXXVIII gives the value of a at the beginning of each Kaliyuga century.

Table LXXIX corresponds, with a necessary shift of position, to Table LXXIV above; the use of which is fully explained in my former papers, §§ 279, 301.

---

[1] To find the value of a, or t, i.e. the exact moon's phase, in 10,000ths of the circle, at any moment of any day, note its value at mean sunrise of the first civil day of the luni-solar year, as given in Table LXXVI (col 23), and add its value for intervening days, hours, etc. (*Tables LXIV, LXV under heading a*).

Tables LXXVIII and LXXIX, with Table LXXIII above (under heading *a*), which gives the value of *a* at the beginning of each year of the Kaliyuga century, enable us to find the value of *a* at mean sunrise of the civil day Chaitra śukla 1 at the beginning of each luni-solar year. Tables LXXVIII and LXXIII yield the value of *a* at mean sunrise of the day on which mean Mēsha-samkrānti occurred, and Table LXXIX enables, by addition, the *a* for the interval of days between that day and the day Chaitra śukla 1 to be ascertained. [The same can be found by subtracting from the sum of the values obtained from Tables LXXVIII and LXXIII (col *a*) the value for those intervening days given in Table LXIV above (*see Example 1*).]

The use of Tables LXXX and LXXXI is explained above (§ 308) They correspond, *mutatis mutandis*, with Tables XLVIII A, XLIX above used in calculation for the sun's true longitude

310 The century-Table LXXVIII requires some further explanation Its object is to determine the mean moon's phase, *a*, at mean sunrise of the opening civil day of each Kaliyuga century, i e the day on which mean Mēsha-samkrānti occurred at some time later on that day. Reference to Table LXXVI shows that this opening day occurred at the beginnings of centuries 36 and 37 K Y on a Sunday, and in centuries 38 to 45 on a Saturday From Table I, *Indian Calendar*, by adding the *śōdhya* interval (*above*, § 306, viii) to the date and time there given for the moment of true Mēsha samkrānti, we find that in centuries 46 to 48 it fell on a Friday In the mean system, therefore, centuries 37 and 45 were defective centuries, while the rest were common

Table LXXVIII corresponds to Table LXXII above, which concerns true solar years, and by the true system, i e calculation by the movements of true sun, the only defective century was century 42 This accounts for the difference between the two Tables

It has been shewn above (§ 299, i) that the actual value of *a* at mean sunrise of Sunday, 21 March A.D 499, on which day, 6 hours later, occurred the moment of mean Mēsha-samkrānti (mean sun at 0°) at the beginning of Kaliyuga century 36, was, in notation in 10,000ths of the circle, 7715 352496330 The values of *a* for later century-beginnings are found by addition to this of the century increases of *a*, common and defective as required

EXAMPLES

Example 1 To find the European day, week-day, and phase of mean moon, i e the mean tithi-index a (which = t, the index) at mean sunrise of the first civil day of the luni-solar year, that is to say, of the day called "Chaitra śukla 1" of the year in question

[This example is given in order to enable any student to verify the entries in Table LXXVI, cols 19-23, For ordinary date work the entries themselves afford all information]

The mean new moon which marks the astronomical beginning of any mean lunar year is the new moon at the end of the lunar month Phālguna of the previous year The moment of its occurrence is always earlier than the moment in the current year of mean Mēsha-samkrānti, the beginning of the mean solar year The civil day next following the moment of the initial mean new moon of the year is called "Chaitra śukla 1," that tithi being current at mean sunrise of that civil day Our tabular calculations being for mean sunrise, the value of *a* in Table LXXVI, col 23, must always be between 0 and 333 3, the last being the limit of the tithi

To find its value for any year we must first calculate the value of *a* at mean sunrise on the day of occurrence of mean Mēsha-samkrānti from Tables LXXVIII and LXXIII (above) under heading *a*

This done there are two processes by which the mean sunrise value of *a* on the day Chaitra śukla 1 can be obtained One is to use Table LXIV, which, by *deducting* from the *a* of mean Mēsha-samkrānti-day mean sunrise (already found) the next lower value of *a* in the Table as given for the first 30 days, yields at once the interval of days between Chaitra śukla 1 and

Mēsha-samkrānti, the value of a at mean sunrise of the former, and the required week-day The second process is, using Table LXXIX, to find such earlier day as by *adding* its a to the a of Mēsha-samkrānti, already found, will yield a result between 0 and 333 3 The Table then shews the interval of days between the two sunrises, and the week-day corresponding to Chaitra śukla 1.

A. Take for instance the year K.Y. 3725 expired, A D 624-25. Mean Mēsha-samkrānti occurred in that year (*Table LXXVI, cols. 13-17*) on Wed 21 Mar ,—serial day 81, from Jan. 1. We take the value of a at mean sunrise at the beginning of the Kaliyuga century and at the beginning of the expired year from Tables LXXVIII and LXXIII respectively The result gives the value of a at mean sunrise of Mēsha samkrānti day in the given year

		w-d	a
(*Table LXXVIII*). K Y cent 37		(1)	6583 1816
(*Table LXXIII above*) K.Y year 25 . . .		(8)	2047 6413
At mean sunrise on Wed 21 Mar, the day of occurrence of mean Mēsha-samkrānti . . .		(4)	8630 8229

Process 1

	w-d	a
(*Table LXIV above*). Next lower value of a in the first 30 days of the Table, i e that for 25 days . .	−(4)	−8465 7968
At mean sunrise of the day Chaitra śukla 1 . .	(0)	165 0261

This Chaitra śukla 1 civil day was (81−25=) Day 56, or (*Table IX, Indian Calendar, or LXIX above*) Sat 25 Feb A D 624

Process 2

	w-d	a.
At mean sunrise on Wed 21 Mar, the day of mean Mēsha-samkrānti (*as above*)	(4)	8630 8229
(*Table LXXIX*) The only value of a which yields result between 0 and 333 3	+(3)	+1534 2032
At mean sunrise of the day Chaitra śukla 1 . .	(0)	165 0261

Table LXXIX shews that the interval of days was 25, and the result is in all respects the same as the former

B Calculation for the mean sunrise value of a on the day of mean Mēsha-samkrānti, the first step shewn in the above, by use of Tables LXXVIII and LXXIII sometimes results in the day found being not the actual day on which Mēsha-samkrānti took place but the day next to it This is inevitable, seeing that only one Table has to stand for the odd years of all centuries In such case the necessary adjustment must be made for one day's difference The entries in Table LXXVI, cols 13 to 17, are conclusive as to the actual day

Take the year A D. 625-26, K Y. 3726 expired, In that year mean Mēsha-samkrānti occurred on Thurs 21 Mar , serial day 80

		w-d	a
(*Table LXXVIII*) K Y century 37 . . .		(1)	6583 1816
(Table LXXIII) K Y year 26		(5)	5986·9072
At mean sunrise of Friday, 22 Mar		(6)	2570 0888
Deduct value for one day (*Table LXIV*) . . .		−(1)	−338 6319
At m. sunrise of Thurs 21 Mar, the day of mean Mēsha-samkranti		(5)	2231·4569

For the a of Chaitra śukla 1 and its day and week-day, we use either of the two processes.

<div align="center">Process 1</div>

At m sunrise of m M. S -day, Thurs 21 Mar . .	(5)	2231 4569
(*Table LXIV above*) Next lower value of a in the first 30 days of the Table, viz for 6 days' interval . .	—(6)	—2031 7912
At mean sunrise of Fri. 15 Mar , being the day Chaitra śukla 1	(6)	199 6657

<div align="center">Or, Process 2</div>

	w-d	a.
At m sunrise of m Mēsha-samk day (*as above*) . .	(5)	2231 4569
Add (*Table LXXIX* for 6 days earlier) . . .	+ (1)	+7968 2088
Result (*same as above*)	(6)	199 6657

Example 2. To find the mean tithi-index a for any day in the year, or any moment of any day

Table LXXVI, cols 19-23, states the civil day, Chaitra śukla 1, for each year, its serial number from Jan 1, its week-day, and its tithi-index a at mean sunrise. Calculate, from Table III *Indian Calendar* or Table LXIII above, the interval of whole days to mean sunrise on the given day, and, if necessary, the fraction of day subsequent to that sunrise. Add the increment of a for whole days from Table LXIV, and for fractions of the day from Table LXV, to the a given in Table LXXVI

Whole numbers may always be used for whole days, the decimals being only resorted to for close cases and when the calculation includes a fraction of a day

E g Required the tithi-index at mean sunrise on Āshādha śukla 4 in the year corresponding to A D 625-26, and at 8^h 20^m 15^s after m sunrise on that day.

	d_1	w-d.	a.
Table LXXVI Chait śuk 1, mean sunrise .	(74)	(6)	199 6657
Tables LXIII A, LXIV Interval to Āsh śuk 4, and increase of a	(91)	(0)	815 5005
At mean sunrise on Āsh śuk 4 day . . .	(165)	(6)	1015·1662

Day 165 was (Table IX, *Indian Calendar*, or *Table LXIX above*) 14 June A D 625 (6)=Friday a=1015 shews (*Table VIII or LXVIII*) that śukla 4 was current at mean sunrise of that day

For the specific hour mentioned—

		a.
At mean sunrise on that day		1015·1662
(*Table LXV*)	8^h	112·8773
	20^m	4 7032
	15^s	0.0588
At 8^h 20^m 15^s after mean sunrise . . .	$a=$	1132 8055

Example 3 To find a (the tithi-index, or phase of mean moon) at each of the solar samkrāntis in the year (the moments of the mean sun's entrance into the several signs), and to determine whether an intercalation of a lunar month took place during the year

Table LXXVII, cols 13, 14, 17, shews the day and time of occurrence of mean Mésha-samkránti (mean sun at long ·0°) in each year, and Example 1 shows how to find the value of a at mean sunrise of that day. To that value must be added from Table LXV the increment of a during the interval from mean sunrise to moment of samkránti The advance of a during each mean solar month, i e from each mean samkránti to the next (*Table LXXVII, col 4*) is 307 3526 The work may be carried out by use of whole numbers, except when a case is very close. This occurs when a waning moon is very near 10,000, or when a waxing moon is very near 0

Required the above details for the years noted in Examples 1, 2, viz A D 624-5 and 625-6

In A D 624-25 mean Mésha-samkránti took place 14^h 2^m 30^s after mean sunrise In A.D 625-26 it took place 20^h 15^m 0^s after mean sunrise (*Table LXXVI, cols 13-17*)

	a
A D 624-25　Value of a at m sunrise on mean Mésha-samkránti-day, as already found (Example 1) . . .	8630 8229
(*Table LXV*).　Increase of a in 14^h	197 5353
Ditto　　2^m	0 4703
Ditto　　30^s	0 1176
Exact value of a at moment of mean Mésha-samkránti . .	8828 9461
A D 625-26　Value of a at m. sunrise of mean Mésha-samkránti-day as found	2231 4569
(*Table LXV*).　Increase of a in 20^h . . .	282 1932
Ditto　　15^m	3 5274
Exact value of a at moment of mean Mésha-samkránti . .	2517 1775

For the several samkrántis in each year we work here roughly with whole numbers only, adding successively the increase of a in 1 solar month

	A D 624-25	A D 625-26
At Mésha-samkr . .	$a=8829$	2517
	307	307
At Vrishabha-samkr. . .	9136	2824
	307	307
At Mithuna-samkr . .	9443	3131
	307	307
At Karka-samkr. . .	9750	3438
	307	307
At Simha-samkr . . .	57	3745
	etc.	etc

In A D 624-25 it is seen that the mean moon was waning at the Karka-samkránti and waxing at the Simha-samkránti, proving an intercalation of a lunar month, which month (*see Table LXXVII, col 1*) was Śrávaṇa Actually a at Simha samkránti was 58 36.

In A.D 625-26 the small value of a at the moment of Mēsha-samkrānti shews that there could have been no intercalation in that year (*see above*, § *306, xi*)

Example 4　To find the mean moon's nakshatra, or her place in the ecliptic circle at any moment

(*See* § *308 above*)　We have to find the value of s, the sun's mean long, at the given moment and the value at the same moment of a, the index of the mean tithi. $s + a = n$, the index of the nakshatra　I assume that, as usual, the values wanted are those at mean sunrise on the given day, for later moments they can easily be found, from Table LXV for a, and from Table LXXXI for s　The example here given will shew the process of work.

Required the nakshatra at mean sunrise on the day referred to in Example 2, viz　Āshādha śukla 4 in K Y 3726, which was proved to be 14 June A D　625, and on which day at mean sunrise the value of a was found to be 1015 1662　The day, measured from Jan 1, was serial number 165　In that year mean Mēsha-samkrānti took place (*Table LXXVI*) on Day 80 at 20^h 15^m after mean sunrise　The interval of whole days between 20^h 15^m after mean sunrise on the day of Mēsha-samkrānti and 20^h 15^m after mean sunrise on the given day is $(165-80=)$ 85.

			s
(*Table LXXX*)　Interval of 85 days　. 　.　.　.　.　.			2327 1179
Less (*Table LXXXI*) for 20^h　.　.　.	22 8149		
for 15^m　.　.	0 2852		
	23·1001	.　.	−23 1001
At mean sunrise on the day Āshādha śuk　4,　.　.　.			s=2304 0178
Add a, as found for that mean sunrise　.　.　.　.　.			1015·1662
At mean sunrise on that day (=14 June)　.　.　.			n=3319 1840

Table VIII *Indian Calendar*, or Table LXVIII above, shews that the moon was then in the nakshatra Āślēshā by the equal-space system and by Garga, but in Maghā by the Brāhma Siddhānta [1]

The value of n, 3319 1840, in 10,000ths of the circle, can be converted into degrees, if required, by Table XLV B, above.　It = 119° 29′ 26″　That was the mean moon's place

Example 5　The lagna.　(See Indian Chronography, § 193, p 74, and Example 63, p 127)
Required to ascertain at what hour on the day Āshādha śuk 4 K Y 3726, or 14 June A D. 625, the sign Tulā became lagna

At mean sunrise the sun's mean long s was (*Example 4*) 2304 0178, roughly (*Table XLV above*) 82° 57′　The first point of Tulā (Libra) (*Indian Chronography, Table XXII*) is 180°. 180° − 82° 57′ = 97° 3′　97° × 4 = 388^m, or 6^h 28^m. 3′ × 4 = 12^s　The first point of Tulā, therefore, was lagna at 6^h 28^m 12^s after mean sunrise on the day in question.　It lasted for 2 hours, when Vṛiśchika (Scorpio) became lagna

---

[1] As to these systems see *Indian Calendar*, § 38, p. 21 ; *Indian Chronography*, § 112 etc.

TABLE LXXVII

DURATION AND COLLECTIVE DURATION OF MEAN SOLAR MONTHS ACCORDING TO THE FIRST ARYA
SIDDHĀNTA, WITH INCREASE OF a AT EACH SAMKRĀNTI

Mean luni solar month, ending after the second of the two solar samkrāntis connected with it	At the mean solar samkrāntis.	Collective duration in time and collective increase of a from mean Mēsha samkrānti to the several samkrāntis.					
		Day	Week-day	H	M	S	a
1	2	3					4
1 Chaitra .	Mīna samk (of previous year)						
2 Vaisākha . .	Mēsha-samk. .	0	0	0	0	0	0
3. Jyēshṭha .	Vrishabha-samk	30	(2)	10	31	2½	307 3526
4. Āshāḍha . .	Mithuna-samk. .	60	(4)	21	2	5	614 7052
5 Srāvaṇa . .	Karka-samk .	91	(0)	7	33	7½	922 0579
6 Bhādrapada	Simha-samk. .	121	(2)	18	4	10	1229 4105
7 Āśvina .	Kanyā samk .	152	(5)	4	35	12½	1536 7631
8 Kārttika .	Tulā-samk .	182	(0)	15	6	15	1844 1157
9 Mārgásira	Vrischika-samk .	213	(3)	1	37	17½	2151 4684
10 Pausha .	Dhanus samk. .	243	(5)	12	8	20	2458 8210
11 Māgha .	Makara-samk	273	(0)	22	39	22½	2766 1736
12. Phālguna .	Kumbha-samk.	304	(3)	9	10	25	3073 5262
1 Chaitra (of following year)	Mīna-samk	334	(5)	19	41	27½	3380 8789
	Mēsha samk (of following year)	365	(1)	6	12	30	3688.2315*

The duration of each mean solar month is 30d 10h 31m 2½s; and during this period in addition to one whole revolution, the mean moon increases her distance from mean sun, in measurement by 10,000ths of circle by, (or in other words the monthly increase of a =) 307 352623 726.

* More fully 3688 231484714.

TABLE LXXVIII

VALUE OF a ($= t$) AT BEGINNING OF CENTURIES OF THE KALIYUGA, ACCORDING TO THE FIRST ARYA SIDDHANTA MEAN SYSTEM

[The value of a to be added for beginning of odd years of centuries is given in Table LXXIII above   W. D = Week-day]

Century K Y	W -D	a (= t)

47	6	4584 2084
48	6	3452 0375

The duration of each mean solar month is 30d 10h 31m 2½s, and during this period in addition to one whole revolution, the mean moon increases her distance from mean sun, in measurement by 10,000ths of circle by, (or in other words the monthly increase of $a=$) 307 352623726

N B —These values of a agree generally with Professor Jacobi's values above (Vol XI, p 164) The apparent differences are due to two causes. (i) The present estimate of the sum of the greatest equations of moon and sun is about 0 4 greater than that of Professor Jacobi (ii) The values here stated for the beginnings of centuries 38 to 42 are for mean sunrise on Saturdays, while his are for mean sunrise on the following Sundays

TABLE LXXIX.

MEAN SUNRISE VALUES OF a (DISTANCE OF MEAN MOON FROM MEAN SUN), IN 10,000THS OF CIRCLE, FOR A MONTH PREVIOUS TO THE DAY OF MEAN MESHA-SAMKRANTI.

Interval of days from mean Mesha-samkranti day	W -D	a (mean sunrise value)	Interval of days from mean Mesha-samkranti day.	W -D	a (mean sunrise value).

N B —The use of this Table is explained in example 1.

TABLE LXXX

The Sun's mean longitude during the Hindu solar year, in 10,000ths of circle, according to the First Ārya Siddhānta, at periods of 24 hours each, measured from the moment of mean Mesha-samkrānti

The same in degrees, etc., can be calculated by Table XLIV, Vol XIV above

24 hour period	Sun's mean longitude	24-hour period	Sun's mean longitude	24 hour period	Sun's mean longitude	24 hour period	Sun's mean longitude
1	2	1	2	1	2	1	2

No. 7—TWO NEW GRANTS OF DHRUVASENA [I] FROM PALITANA.

By V S SUKTHANKAR, PH D

I edit here two new Valabhi copper-plate grants (one complete and one incomplete) which were presented, in 1918, to the Trustees of the Prince of Wales Museum, Bombay, by the Bhāvnagar Darbar, which is ever ready to further the cause of epigraphic research by placing ungrudgingly the materials, as they are discovered, in the hands of students of Indian history for investigation and publication, and, when possible, by having them exhibited in centrally situated museums   The plates under reference were discovered at the bottom of a small tank outsid the Śatruñjaya Gate at Pālitānā while the tank was being drained during the time of the la Thakor Saheb of that State [1]

A.—PLATES OF DHRUVASENA I.; [VALABHI]-SAM[VAT] 207.

The plates, which are inscribed on one side only, are two in number, each measuring roughly 11¼" broad by 6¾" high. The edges are just slightly raised in order to protect the writing, which (excepting portions of ll 1-4) is in a state of perfect preservation   The plates are of fair thickness, but the letters, being deep, show through on the reverse sides   The engraving is well executed   Each of the plates has two holes bored in it   A ring of copper passing through one pair of them serves to hold the plates together at one end   The seal, which is an invariable accompaniment of such plates, is missing.   The aggregate weight of the plates is about 102 *tolas.* Each plate contains twelve lines of writing, the last line but one of the second plate contains the date

From the foregoing description of the plates, as well as from the facsimiles of them appearing with this article, it will be evident that this record does not differ in any striking particular from any of the hitherto published records of the same king. Only in the portion dealing with the grant proper does the text of this inscription differ, for example, from that of other plates of this king which were discovered some years back also at Pālitānā, and have been edited by Dr. Sten Konow in a former issue of this Journal [2]   The royal donor, Dhruvasēna, as well as the *dataka* Mammaka and the writer Kikkaka, are names well known to the Indian epigraphist.   It will, therefore, be unnecessary to go here into a minute description of the characters and orthography of this inscription.   It will suffice to observe that the alphabet offers a specimen of final *t* (l. 15), final *m* (l. 23) and the numerical ideograms 200, 7, and 5, and that the name of the founder of the dynasty is spelt as *Bhatakka* (l 3)   At the end of line 12 is to be found a horizontal stroke, about ¼" long, evidently drawn with a view to fill up the empty space remaining at the end.   The reason for leaving the space vacant appears to be that the writer did not wish to commence, at the end of the line, a long word the whole of which would not have been contained in the short space that was left over

The inscription is one of the *Mahārāja* Dhruvasēna [I.] of the Maitraka dynasty, and the grant contained in it is issued from the city of Valabhī   The object of the inscription appears to be to record the confirmation by Dhruvasēna of the donee, a Brāhmaṇa named Mādhava, of the Śunaka *gōtra*, student of the Chhandōga School, and resident of the village of Jyēshthānaka (stated to be Akshasaraka-*prāvēsya*) in the Hastavapra-haranī in the possession of some

---

[1] My friend Pandit Girijasankar Vallabhji of Rajkot, Curator of the Prince of Wales Museum, Bombay, informs me that the five Pālitānā plates edited by Prof Konow (above, Vol. XI, pp 104 ff) were discovered at the same place and at the same time as the plates here described.

[2] Above, Vol. XI, pp 104 ff.

land already enjoyed by him in the village of which he was a resident Besides Hastavapra, which is the modern Hāthab (6 miles south of Gōghā in the Bhāvnagar State), and Valabhī, which is commonly identified with the modern Valā (situated in 21° 52′ N and 71° 57′ E), none of the places can be located The date of the record is the year 207 (given as usual in numerical ideograms), and the 5th (tithi) of the dark fortnight of Vaiśākha The year when referred to the Gupta-Valabhī era yields A D (207+320)=A.D 527

There are two expressions in this inscription, both occurring in the portion dealing with the grant proper, which deserve some comment they are Akshasaraka-prāteśya- (l 12) and sa-śaibaram (l 16) The latter we will consider first

Being mentioned along with the well-known technical expressions sa-hiraṇy-ādēyam and sa-bhāta-vāta°, sa-śaibaram must be a term of like nature, i e a technicality of the lawyers , but what its significance may be I am unable to surmise There can be no question regarding the correctness of the reading, the letters are perfectly distinct The word śaibara is not to be found in dictionaries, nor have I come across it elsewhere I can only think that it may be, as it stands, a clerical error, but I am unable to suggest any plausible emendation for it

The word prāteśya in the other expression referred to above is also one that presents some difficulty to the interpreter Here it is used in compound with Akshasaraka, evidently a place-name, and serves to locate more definitely the village Jyēshthānaka situated in the Hastavapra-haranī As far as I know, the word prāteśya has been met with only twice before once in another Valabhī grant, occurring there in a compound with the same place-name Akshasaraka, and once again in the Khariar grant of Mahāsudēva, compounded with the word Navannaka, which is also a place-name

The former record forms one of the five Valabhī grants from Pālitānā[1] edited by Prof Sten Konow, and is a grant of Dhruvasēna I , dated in Samvat 210 In that connection Prof Konow rightly points out that the phrase Akshasaraka-prāteśya of the grant corresponds to the Akshasaraka-prāpīya in a third Valabhī grant,[2] viz the Ganēśgad (Baroda) plates of Dhruvasēna, dated Samvat 207 Hultzsch, when editing the latter grant, translated the phrase by ' which belongs to the Akshasaraka-prāpa ' Prof Konow, who regards prāteśya and prāpīya as synonyms, rejects Hultzsch's rendering of Akshasaraka-prāpīya and advances the suggestion that prāteśya in this connection means the same thing as in the phrase a-chāta-bhata-prāteśya, and accordingly translates the phrase by ' which can be entered from (i e , which borders on) Akshasaraka ' I cannot, in the first place, admit that the expressions a-chāta-bhata-prāteśya and Akshasaraka-prāteśya correspond exactly For in the former the first member of the compound comprises the logical subject of the verb contained in prāteśya , but such cannot be the case with the second expression, even if we assign to it the meaning which Prof Konow does Secondly, I do not understand what is meant by saying that a village could be 'entered' from such and such a place If, moreover, prāteśya meant the same thing as 'bordering on,' as Prof Konow asserts, I cannot help thinking that the writer would have employed a simple word like samīpa or pārśva-vartin, which lie at hand, to express that simple idea of proximity rather than use the circumlocution of prāteśya or prāpīya Hultzsch, on the other hand, appears to me to be undoubtedly on the right track He looks upon prāpīya as a derivative of prāpa, which he takes to be a word denoting a territorial division smaller than an āhāra Similarly the analogous term prāteśya should also be looked upon as a taddhita of prāteśa That this derivation is correct may be seen from the Khariar plates of Mahāsudēva, in which a village is described (l 4) as Kshitimad-āhārīya and Navannaka-etat-prāteśya No one will dispute that āhārīya is derived from āhāra (' district,' ' province ') by the addition of the suffix -īya That supplies us with the clue to the explanation of the other words under consideration here All these words are derived

¹ Above, Vol XI, pp 104 ff , and Plates   ² Above, Vol III, p. 320, and Plate

by the addition of the secondary -(*i*)*ya* to the strengthened forms of the roots *ā-hṛi*,, *pra-(ā-)viś* and *pra-(ā-)āp* (' bring to,' 'carry to'), words with only minute differences of meaning I feel, therefore, constrained to reject the interpretation of Prof Konow in favour of the other *Prāpīya* I take to be 'that which belongs to the *prāpa*,' and *prāvēśya* 'that which belongs to the *prāvēśa* (or *pratēśa*)', both *prāpa* and *prāvēśa* I regard as territorial divisions smaller than the *āhār*.

TRANSLATION

[Ll 1-11 contain the usual preamble, for translation, cf, for instance, that of the opening lines of the Pālītānā plates, No 1, edited by Prof Konow, *Ep Ind*, Vol XI, p 108.]

(Ll 12-16) Be it known to you that for the purpose of increasing the religious merit of (my) mother and father, and for the sake of the attainment of the desired reward both in this world and in the next, I have confirmed, as *brahma-deya*, with libation of water, (the enjoyment of) one hundred and sixty *pādāvarttas*, on the northern boundary of the Jyēshthānaka village belonging to the Akshasaraka-*prātēsya* in the Hastavapra-*haranī*, which had (formerly) been and are (still) being enjoyed (by the donee⁷), for (the benefit of) the resident of the same village, (namely,) the Brāhmaṇa Mādhava of the Sunaka *gōtra*, a student of the Chhandōga School,—to last for the same time as the moon, sun, ocean, earth, the rivers and mountains, to be enjoyed by the succession of his sons and sons' sons,—with (?) *saibara*, with gold (and) *ādēya*, with *bhūta*, *vāta*, and (?) surety of holding (*pratyāya*)

(Ll 17-19) Wherefore, no enquiry should be made or obstruction caused (to him) by any one, while he is, according to the proper conditions of a *brahma-dēya*, enjoying, cultivating, or assigning (it to others) And this our gift should be assented to by those born in our lineage, and by future good kings, bearing in mind that power is perishable, the life of man is uncertain, and that the reward of a gift of land is common And he who confiscates it or assents to its confiscation incurs the guilt of the five great sins together with the minor ones

(Ll. 20-22) There are also two verses sung by Vyāsa about this

[Here follow two of the customary verses]

(L 23) The *dūtaka* is the *pratīhāra* Mammaka (Dated the) 5th (*tithi*) of the dark (fortnight) of Vaiśākha (in the) year 200 7

(L 24) (This is) the sign-manual of me *Mahārāja* Dhruvasēna [I]. Written by Kikkaka

B —ANOTHER PLATE OF [DHRUVASENA I.]

This plate, which contains only the opening portion of a land-grant of the Maitraka king Dhruvasēna I, is inscribed on one side only and measures roughly 10¾″ broad by 6½″ high The

⁷ The construction of line 14 is somewhat confused; it is not clear who the donee was, or who, at the time of the grant, was in possession of the land which is the object of the grant. As it stands, the text does not make any sense; my rendering is conjectural
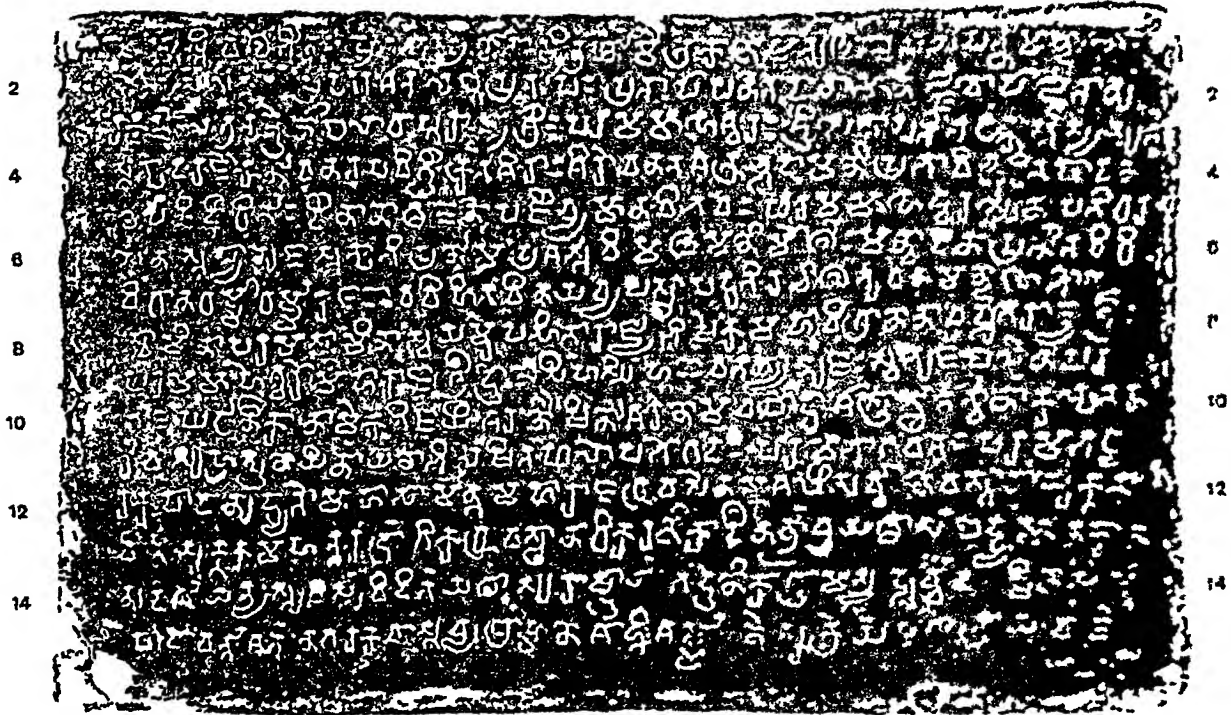

A i

A ii

Kathiawad Plate of Dhruvasena [I] · Samvat 206.

SCALE ONE-HALF
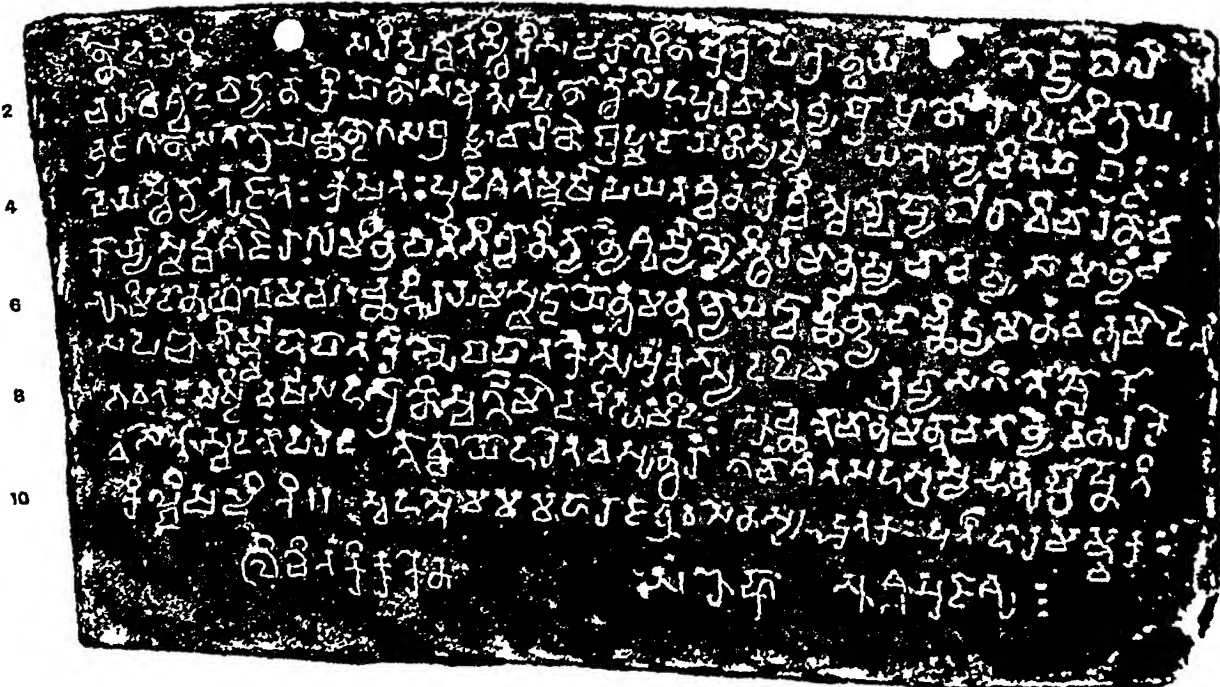

edges are just slightly raised, in order to protect the writing, which is in a state of excellent preservation throughout   The letters, which are deeply incised, show through on the reverse side of the plate   The engraving is well executed   The plate has a pair of holes bored at two adjacent corners and intended for receiving the ring and seal, which are missing   Its weight is 56 *tolas*   It contains fifteen lines of writing   The letters are of the period to which the plate refers itself, and of the type met with on other plates of the Maitraka dynasty   In short, this record is exactly like any of the large number of grants of Dhruvasena I that have latterly been brought to light   A detailed description of the characters, language and orthography of these plates, or even an English rendering of the text, seems superfluous   We may take it for granted that the *dutaka* of this grant was the *pratihara* Mammaka, and the writer Kikkaka

The grant was issued from Valabhi by the *Mahasamanta Maharaja* Dhruvasena [I] to the Brahmana Santisarman of the Atreya *gotra*, [a student of] the Vaji[saneya] School and a resident of Nagaraka, either bestowing upon him or confirming him in the possession of one hundred *padavarttas* of land on the south-eastern boundary of the village of Bhadreniku, situated in Surashtra

I am unable to identify Bhadreniku   Nagaraka is probably Vadnagar, the home of the Nagar Brahmans

<div align="center">POSTSCRIPT.</div>

<div align="center">### A PLATE OF DHRUVASENA DATED SAM. 206</div>

Since writing the above I have come across a new Valabhi plate containing the concluding portion of a grant of Dhruvasena dated in *sam* 206, about which I should like to add a few words in continuation of the above note on the Bhavnagar plates.   This new plate was placed in my hands for decipherment by Mr. J C Chatterjee, Dharmadhyaksha (Secretary in the Ecclesiastical Department) to the Government of His Highness the Gaikwar of Baroda   It was sent to him, he told me, officially from Kathiawad for decipherment   that is all that I could elicit from him regarding its previous history   The plate is 11¼ inches long by 6½ inches broad, the edges are raised to protect the writing, which is in a state of perfect preservation, and the characters belong to the period to which the plate refers itself   in one word, the grant is similar in every respect to the records of the Valabhi kings that have hitherto come to light.

---

[1] From the original plate, and a set of estampages
[2] Up to this the text is practically identical with the text of the Palitana Plate of Dhruvasena I (dated 206), published above, Vol XI, pp 105 ff.   In l 6, read °*t-pad-abhipranama°* for °*t-pabhipranama°* , and *Manvadina* for °*dina*
[3] Read °सीम्नि.   [4] The rest of the inscription is missing

The inscription is one of *Mahārāja* Dhruvasēna [I.] and records the grant of a village (of which the name must have occurred in the missing portion of the grant and is therefore now lost) to a Brāhmaṇa named Rōtghamitra of the Vrajagaṇa *gōtra*, a student of the Chhandōga School, and resident of Siṁhapura, for the maintenance of certain sacrifices   The grant is dated saṁ. 200 6, Āśvina śukla 3   The *saṁvat* year, when referred to the Valabhi era, yields A.D (206 + 319) 525   The *dūtaka* was Mammaka, and the writer Kikkaka, as usual.

The only point worthy of notice in this grant is the village-name Siṁhapura, which is mentioned in it as the residence of the grantee.   It is tempting to identify it with Sīhōr in the east of the Kathiawad peninsula, a junction on the Bhavanagar-Wadhwan Railway, not far from Valī the ancient Valabhī

No 6.—SRIRANGAM COPPER-PLATE GRANT OF DEVARAYA II; SAKA 1349 (1350)

BY THE LATE T A GOPINATHA RAO, M.A , TRIVANDRUM

The temple of Śrī-Raṅganātha at Śrīrangam possesses, among others, two sets of copper-plates belonging to the reign of the Vijayanagara king Dēvarāya II   The inscriptions engraved upon these two sets are edited below from the impressions prepared under my supervision.

No I.   SAKA-SAMVAT 1349

This set consists of three plates (size 10⅜ × 6⅛ in), of which the first and the third bear writing on one face only, namely, the second side of the first and the first side of the third.

The inscription is in good state of preservation   The alphabet in which the record is written is
Nandināgarī, and the language partly Sanskrit and partly Kannada   The first section covers
41 and the second 34 lines, and the remaining portion contains the usual admonitory and impre-
catory verses   At the end appears as is usual with the documents of the kings of the first
dynasty of Vijayanagara, the word *Śrī-Virūpāksha*, the sign-manual of the king, written in the
Telugu-Kannada alphabet   The same sort of mistakes, careless execution of the engraving,
leaving room for a number of corrections, erasures, interlineations, etc, and other faults common
to the other grants of this period are to be found in these two sets of copper-plates also, there
is no necessity for them to be noticed in detail here, they are noted in the foot-notes at the
appropriate places

The record is dated Śaka 1349, which is expressed by the chronogram *dhualoka*, this year
corresponded to the cyclic year Plavanga   In the Kannada portion the Śaka year is given as
1350, and the same Plavanga is said to be current   On a Sunday, which was the Utthāna
dvādasī *tithi* in the bright half of the month Kārttika, the king Dēva-Rāya II granted to the
God Ranganātha of Śrīrangam the village of Pāndamangalam together with the sub-villages,
Tirunalūr, Sēranaibanda-perumā-nallūr, and Sunepuha-nalūr, in the name and for the
merit of his mother Nārāyanāmbikā   The genealogy of the king is traced thus —

<div align="center">

Sangama
|
His middle son
Bukka I
md Gaurāmbikā
|
Harihareśvara
|
Pratāpa-dēva-Rāya I
md Dēmāmbikā
|

md Nārāyanāmbikā
|
Dēva-Rāya II

</div>

Dēva-Rāya II bears the *birudas*, *Rāj-ādhirāja*, *Rāja-param-ēśvara*, *Bhāsh-ātilanghi-bhūpāla-
bhujanga* (= *Bhāshege-tappuva-rāyara-ganda*), *Mūru-rāyaravganda* and *Hindu-rāya-suratrāna*.
Having ascended his ancestral throne and while protecting the kingdom, residing in his capital
Vijayanagara, which is situated on the bank of the river Tungabhadrā, king Dēva-Rāya made
the grant mentioned above in the presence of the god Virūpāksha on the bank of the Tungabha-
drā   The villages Pāndamangalam, Tirunalūr and Sēranaibanda-perumā-nallūr are said to have
been situated in the Rājagambhīra *valanādu* on the south side of the river Kāvērī, and Sune-
puha-nalūr in the Mēlmuri of the Mala *nādu*, a sub-division of the Rājarāja *valanādu*, on the
north of the same river   The Kannada portion adds that the villages belonged to the Amarada
hōbali   All of them belonged also to the Tiruchchirāppalli *rājya* or *chāvadi*   The purpose for
which the grant is made is given in full detail in the Kannada portion   From the income of
the villages twelve perpetual lamps should be burned, flower-garlands dedicated and one festi-
val celebrated   The grant was made as an auxiliary to the *Gō-sahasra Mahādāna* performed by
the king   The grant was ordered to be executed from the first *tithi* of the bright fortnight of
the month Āshādha   The income from the villages situated on the south of the Kāvērī was
1403 coins (*kula-gadyāna*), and that from the village on the north of the river 420, total 1,82

gadyānas. A number of taxes leviable in these villages are included in the grant, they are taxes on the *napšey, puṇšey, pūm-payir, vāšal-* and *maṇai-ppēru-kaḍamai, tari-kkaḍamai, māravaḍai, maravaḍai, kulavadai, kalāyam, tirigai-āyam, pēr-kaḍamai (tari-kaḍamai), āḷukku-nīr-pāḷḷam; mahamai, kattigai-avasaram, palai-kānikkai, Ādi-Kārttigai-pachchai,* and all old and new taxes Several of these have remained unexplained up till now. It is easy to understand the nature of the first four, they are levied on wet and dry cultivation, on inferior crops, on houses and compounds and on looms, *māvaḍai, maravaḍai* and *kuḷavaḍai* are taxes on animals, trees and tanks · that is, perhaps, when animals are sold in markets, on fruit-bearing trees and for fishing in tanks *Kalāyam* literally means tax on stone, it is very likely a tax payable for quarrying stones from hills, what tax is meant by *tirigai-āyam* is not known *Pēr-kaḍamai* means taxes on persons, a sort of poll-tax evidently. *Āḷukku-nīr-pāḷḷam* is a tax for maintaining the person appointed for making regular supply of water to the fields this appears to be the same as *nīrānikkam* *Magamai* is a corrupt form of *magamai,* the nature of being a son to another, this levy is still in force among certain merchants in the Tanjore and Trichinopoly districts On all sales and purchases the merchants collect a small, but fixed, sum and utilize the money thus collected for some public purpose Compare similar words, as *kāyirmai* corrupted into *kōyma, ūrānma,* etc *Kattigai-avasaram* appears to be some sort of tax on fire-wood, and *palai (paḍai)-kkānikkai* is the contribution to be made for the maintenance of the army. *Pachchai* means a *kānikkai,* a *nazar,* a present on important occasions In this sense the word is employed in contemporary literature, for instance, in *Śrī-rachana-bhūshanam,* I, 33 and 34 Such *kānikkais* seem to be given in the months of *Ādi* and *Kārttigai.*

The following places and rivers are mentioned in the inscription —Tuṅgabhadrā, Vijayanagara, Tiruchchirāppalli, Kāvērī, Rājagambhīra *valanāḍu,* Pānda-maṅgalam, Tirunalūr, Śēranaibanda-perumā-ṇallūr, Rājarāja *valanāḍu,* Mēlmuṛi·of the Mala *nāḍu* and Śuṇepuha-nalūr. Of these the Tuṅgabhadrā and the Kāvērī are the well-known rivers of South India Tiruchchirāppalli is the modern town of Trichinopoly, the head-quarters of the district of the same name The part of the country immediately to the south of the river Kāvērī was known to medieval inscriptions as the Rājagambhīra *valanāḍu,* and that on the north of the same as the Rājarāja *valanāḍu* Mala *nāḍu* is a sub-division of this territory and has given its name to a section of the Tamil Brāhmaṇas, *i.e.* the Bṛihach-charaṇa community of Mala *nāḍu* Vijayanagara, the capital of the famous Hindu kings of Southern India, is the modern Hampe on the Tuṅgabhadrā Pānda-maṅgalam is a village a mile and a half west of Trichinopoly, this and Tirunalūr are in the Trichinopoly *Tāluk,* the correct form of the name Śēranaibanda-permā-nallūr is Śēraṇai-venṛa-perumāl-nallūr There is a village some distance south of Pānda-mangalam called Vēndarāya-nallūr. This is perhaps the same. Śuṇepuha-nalūr is situated at a distance of seven and a half miles to the north-west of Trichinopoly

ABSTRACT OF CONTENTS.

Verse 1 Adoration to Śambhu (Śiva)

V 2 Adoration to Ganēśa

V 3 Adoration to Varāha

Vv 4-5 On earth, as the fruit of its *tapas*, was born Yadu in the family of the Moon, which came out of the ocean of milk and is worn by Śiva on his head

Vv 6-7 In his race was born a king named Sangama   His middle son was Bukka, who resembled the jewel *kaustabha* among other jewels

Vv 8-9 To him by Gaurāmbikā was born a son, named Harihara, who was gentle and famous   The renown of his making the sixteen great gifts (*mahādāna*) redounded even beyond the fourteen worlds

Vv 10 12 His son was Pratāpa-dēva-Rāya, who appeared the embodiment of the happiness of his subjects   He conquered his enemies in battles by the prowess of his arms and obtained the favour of Vijaya-Lakshmī (goddess of Victory)   To him, as husband of Dēmāmbikā, was born the prince Vijaya-Bhūpati

Vv 13-18 The queen of Vijaya-Bhūpati was Nārāyanāmbikā. As the fruit of the meritorious acts done by them in their previous birth, Dēva-Rāya was born to Vijaya-Bhūpati and Nārāyanāmbikā and distinguished himself on earth   He is compared to Vikramāditya in valour, to Bhōja in his *bhōga* (?) and to Rāja-rāja (i e Kubēra) in his munificence   The kings of the Anga, Kalinga, Vanga, etc, countries did homage to this king, holding *chāmaras* and other royal insignia in their hands   He bore the *birudas* Rāj-ādhirāja, Rāja param-īśvara, Bhāsh-ātilanghi-bhūpāla-bhujanga, Mēru-rāyara-ganda, Para-rāja-bhayan-kara and Hindu-rāya-suratrāna

V 19 to the end of line 41   Dēva-Rāya, who, seated on his ancestral throne in Vijayanagam, which has the Tungabhadrā as its ditch, ruled the earth, made the grant of the villages of Pānda-mangalam, Tirunālūr, Sēranaibanda-perumā-nalūr and Sunepuha-nalūr to the god Ranganātha   The gift was made in the Śaka year 1349, which is given by the chronogram *dhi alō* a and which corresponded to the (cyclic) year Plavanga, on a Monday

the twelfth *tithi* of the bright fortnight in the month Kārttika, in the presence of the god Virūpāksha on the bank of the river Tungabhadrā The villages Pānda-mangalam, Tirunālūr and Sēranaibenda-perumā-nalūr are said to have been situated on the south bank of the river Kāvērī, in the Rājagambhīra *valanādu*, belonging to the Trisīrāppalli *rājya*, and Sunaipuha-nalūr in the Rājarāja *valanādu* of the same *rājya*, but situated on the northern bank of the Kāvērī

Lines 41-74 In the Śaka year 1350, Plavanga, on the auspicious occasion of the Utthāna-dvādasī in the bright half of the month Kārttika, the king Vīra-Pratāpa-dēva-Rāya Mahārāya gave the following *sāsana* (order) for performing one *avasara* consisting of twelve *harivānas* of perpetual lamps, garlands and one festival every day to the god Ranganātha in the name of Nārāyanadēvi-auva the gift of the villages of Pānda-mangalam, Tirunālūr and Sēranaibanda-perumā-nalūr, yielding 1,403 *kula-gadyānas*, and Sunepuha-nalūr, yielding 420 *kula-gadyānas*, was made for the *anga, ranga*, etc, of the god Śrī-Ranganātha, as an auxiliary to the *gō-sahasra mahādāna* made by the king on the auspicious occasion of Utthāna-dvādasī in the presence of the god Virūpāksha on the bank of the river Tungabhadrā The villages Pānda-mangalam, Tirunālūr and Sēranaibanda-perumā-nalūr were in Amarada *hōbali* of the Rajagambhīra *valanādu* in the Chirichrāpalli *chāvadi*, whereas Sunepuha-nalūr was situated in the Mēlamurī of the Mala *nādu*, a sub division of the Rājarāja *valanādu* in Vadagarai (northern bank of the Kāvēri) These villages were to be enjoyed from the first *tithi* of the bright fortnight of the month Āshādha of the same year The king granted these villages with the following rights of enjoyment namely, the taxes on the lands under wet and dry cultivation, as also *vān-payir* and *puṇ-payir*, the taxes called thev *āsal-, manai-pēru-kadamai, tarikka-damai, māvadai, maravadai, kulavadai, kal-āyam, tirigai-āyam, pēr-kkadamai, tarikkadamai, ālukunipāttam, mahamai, kattige-avasara, padai-kānikkai, Ādi-Kārttigai-pachchai* and all other new and old taxes, all income in gold and paddy and the eight kinds of enjoyment, *nidhi, nikshēpa*, etc

Vv 22-26 The usual admonitory and imprecatory verses

Line 83 contains the words *Śrī-Virūpāksha*, the king's signature

---

No 9.—MOMIGATTI INSCRIPTION OF THE 49TH YEAR OF VIKRAMADITYA VI.

By LIONEL D BARNETT

Momigatti is a village in Dhārwār District, a few miles to the north-west of Dhārwār town, in lat 15° 30½' and long. 74° 59', according to the Bombay Survey[1] The present inscription, now published for the first time, was found in the local temple of Kalamēsvara, on the left side of the image An ink-impression was prepared for the late Dr Fleet, which is now in the British Museum , from it I have edited the text The stone has a rounded top decorated with sculptures, namely, in the centre a *linga*, on the proper right of which is a priest standing facing it, while another upright figure stands to the proper left, all three being in a shrine , to the proper right of the priest, a cow and calf , to the right of the latter, a scimitar ; in the opposite corner, a bull , above these, the sun (on proper right) and moon (on left). Below this is the inscribed area, in two compartments the first of these, comprising lines 1-2, is 2 ft. 3½ in wide and 2¼ in high, and the second, containing lines 3-30, is of the same width and 2 ft 9 in high.—The character is good Kanarese, of an upright rounded type that was beginning to come into use about the middle of the twelfth century. The height of the letters varies from ½ in to ⅝ in. The *jh* (l 9) and *ñ* (ll. 19, 26) may be noted —The language is Old Kanarese, with two

---

[1] The "Meemoeguttee" of the Indian Atlas seems to be intended for Momigatti ; but its position does not quite tally with that of the latter as given in the Survey

formal Sanskrit verses (Nos 1 and 5)　The ancient *ḷ* has been changed to *l* in *kūlam* (1. 14), *bēḷpa* (1 16), *alidavarggey=* (1 27), *ēl-kōti* (1 28), and to *r* in *garddey[u*]maṁ* (1 22) ; it is falsely used for *r* in *toḍaḷd=* (1 16)　*P* is changed to *h* in *halli°* (ll 19, 20), but elsewhere retained Three words are of some lexical interest, viz *tyāga-jaga-jhampi jhampalāchāryya* (1 9), on which see above, Vol XII, p 251, and *nrita* (1. 14), which is abstracted from the ordinary *sūnrita*, and is parallel to *anritika*, " untruthful " in Aśvaghōsha's *Buddha-charita*, II 11

The record, after referring itself in ll. 2-4 to the reign of Tribhuvanamalla (Vikramāditya VI), introduces the Kādamba feudatory Jayakēsi [II], who is decorated with the characteristic titles of his dynasty, and his senior queen Mailala-dēvi (the daughter of Vikramāditya VI), as jointly reigning (ll 4-13)　On the historical points involved herein it suffices to refer the reader to Vol. XIV above, p 299 f　Then follow verses in praise of Vāmaśakti, a Śaiva divine, and Udayamma Gāvunda (ll. 13-17), after which comes the formal statement of a gift of land and houses by the latter to the sanctuary presided over by Vāmaśakti (ll 17-24)

The date is given on ll 17-18 as　the cyclic year Krōdhi, the 49th of the Chālukya-Vikrama era , Āshāḍha śuddha 5 , Sunday　This is irregular　The given *tithi* was current at sunrise on　Wednesday, 18 June, A.D. 1124, and ended about 9 h 16 m after mean sunrise [1]

The only places mentioned are Kundūr (1 19), Eranigereyahalli (1 19), Konnasagere (1 21), and the *tirthas* (1. 25)　Kundūr is the modern Narēndra, on which see above, Vol XIII, p 298

⁸ Read *varsha-sahasrāni*.   ⁴ Read *krimiḥ*.

TRANSLATION.

(Verse 1) Homage to Śambhu charming with the yak-tail fan which is the moon kissing his lofty head, the foundation-column for the construction of the city of the three worlds

(Lines 2-4) While the victorious reign of—hail!—the refuge of the whole world, favourite of Fortune and Earth, great Emperor, supreme Lord, supreme Master, ornament of Satyāśraya's race, embellishment of the Chālukyas, king Tribhuvanamalla, was advancing in a course of successively increasing prosperity, (to endure) as long as moon, sun, and stars —

(Lines 4-13) While he who finds sustenance at his lotus-feet,—hail!—the Mahāmandaleśvara Jayakēśi-dēva, who is decorated with the whole series of titles of honour, to wit, " the noble scion of the Trilōchana-Kadamba lineage sprung from Hara and the Earth which is praised over the whole world, great august sun rising upon the peaks of the Lord of Mountains, fascinating the whole circle of the earth by peculiar majesty exceedingly intense as the sun's rays, having for crest a stately lion, having a banner (bearing the device) of a great ape ; who is (saluted) with the noise of permatti drums and (other) musical instruments, who is sprung from the race presiding over eighty-four cities and consecrated in the consecratory rites of eighteen horse-sacrifices, who has established the puissance of his might upon the massive summits of the Lord of Mountains, the Himavat, a jhampalāchārya surpassing the world in bounty, a Rāma in intrepidity, a touchstone for the gold of warriors, an adamant castle for seekers of protection, a unique tree of desire for the world, white (of fame) as the time of conjunction[1], a Nārāyana incarnate, a sun of glory, a frontal fillet of feudatory princes, a grindstone to foes, a crest-jewel of warrior kings, a crest-gem of the Kādambas," and the Senior Queen Malāla-mahādēvi, were reigning with enjoyment of pleasant conversations —

(Verse 2) If any, being hungry, should come and ask for food, Vāmaśakti Pandita-dēva will gladly give to him rice without saying nay, so that the whole earth praises (him)

(Verse 3) Of Malla Gāvunda, who is pleasant of speech, a celestial tree to panegyrists and dependents, the eldest son is Uday'mma Gāvunda, who is sage, devoted to Hara, a right noble man on earth

(Verse 4) Like a thunderbolt on occasions when hosts of foes assail (him), like a celestial tree on occasions when he makes gifts to suitors, devoted to Mrida like Bāna, is Udayama Gāvunda on earth

(Lines 17-24) Hail ! On Sunday, the 5th day of the bright fortnight of Āshādha in the cyclic year Krōdhi, the 49th (year) of the Chālukya-Vikrama era, in the presence of the Sixteen Gāvundus of the great city of Kundūr (and) the establishment of the Five Maṭhas, Udayama Gāvunda, son of the Ākarika(?) Malla Gāvunda of Eranigereyahalli, having laved the feet of Vāmaśakti Pandita, Āchārya of the establishment of Kali-dēva-svāmi, with pouring of water granted for as long as the moon shall endure a pious foundation on sarvanamasya tenure, immune from all conflicting claims, (comprising) a gravel-field of one mattar west of the village (and) east of the stone-heap, and a paddy-field of one hundred kamma at the eastern corner of the Konnasagere used by the town, and two dwelling-houses south of (the sanctuary of) the god

(Lines 24-28 a prose formula of the usual type)

(Verse 5 a common Sanskrit verse)

No 10—ARASIBIDI INSCRIPTION OF THE REIGN OF SOMESVARA I SAKA 969
By Lionel D Barnett.

Arasībīdi, the ancient Vikramapura, is a decayed village in the Hungund *tāluka* of Bijāpūr District, situate in lat. 15° 54' and long 75° 58' (cf *Ind. Ant*, Vol 30, p 260)   Its name is written as *Arsubidda* on the Indian Atlas sheet 58 and the Hyderabad Survey sheet 30   In the local temple known as the Sūlegudi was found a broken tablet containing the present record, an ink-impression was prepared for the late Dr. Fleet, which is now in the British Museum, and from it I now edit the text

The upper part of the stone is decorated with some sculpture   Immediately over the inscribed area, on a plinth, is a figure of a squatting Jina, with a cow and sucking calf on his proper left, between two columns, and above this is a series of architectural divisions culminating in a vase-shaped *sikhara*   The inscribed area below is about 2 ft 2¼ in broad and 2 ft 2 in. high, but a line or two at the bottom is lost.—The character is a fair Kanarese of the period, the letters vary from ½ in. to ⅝ in. in height.   The *ri* of *rishiyargga*[m*] in l 8 is denoted by a modified *ri* with a tail attached ⟨glyph⟩ —The language is Old Kanarese prose, except for the Sanskrit verse-formula of which the first two letters appear on l 22   The archaic *ḷ* is changed to *l*, except in *eppattara* (l 12, for *ēḷp°*, through *ērpp°*)   The word *sarugi* (l 7) is of some lexical interest

The record, after referring itself to the reign of Trailōkyamalla-dēva, i e Sōmēśvara I (ll. 1-4), relates that Akkā-dēvi, while in the camp around the fortress of Gōkāge,[1] made a grant of lands to the Gonada-bedangi[2] Jain temple at Vikramapura, for the maintenance of the establishment and of the attached friars and nuns, among whom special mention is made of Nāgasēna Pandita of the Hogari[3] Gachchha of the Vaiasēna Gaṇa of the Mūla Sangha (ll. 4-9)   The rest of the inscription is taken up with the details of the endowment, among these we learn that some of the land was purchased from Dadigarasa (l 17), who was very possibly a member of the Bappura family which has left a record of its history in the Sūdi inscription no. K. (above, Vol. XV, p 106, cf *Ind Ant*, Vol XXX, p 266)

The date is given on ll 9-11 as Śaka 969, the cyclic year Sarvajit, the new-moon of Chaitra, a Sunday, an eclipse of the sun   These details are perfectly regular   The given *tithi* corresponded to Sunday, 29 March, A D 1047, on which day it ended 6 h 14 m after mean sunrise[4]   On the same day, at 5 h 51 m after mean sunrise, there was an eclipse of the sun (*Indian Calendar*, p 121)

The following place names are mentioned   Gōkāge (l 6), Vikramapura (ll 6, 13), the Kisukādu Seventy (ll 11-12), Gānada Hālūr (l 12), Muruvadina Pālu (l 13), Rāyagatte (l 15), the tank of Kappadi (l 18), Benares (l 19)   Gōkāge is the modern Gōkāk, the headquarters of the Gōkāk *tāluka*, in Belgaum District, situate in 16° 10' lat and 74° 49' long.   Vikramapura is Arasībīdi (see above)   On Kisukādu see *Ind Ant.*, Vol XXX, p 259   Gānada Hālūr is given on the Indian Atlas as " Ganuduhal," about 3 miles S E of Arasībīdi in lat. 15° 52½' and long. 76° 1' (cf *ibi l*, p 261)   The other local names I cannot trace

---

[1] See *Dyn Kan Distr*, pp 435, 439   Dr Fleet understood the words *sutt irdda* to mean " besieging," which is possible, but not necessary

[2] This title is evidently derived from Akkā dēvi's title *gunada bedangiyar*, and shows that the temple was under her especial patronage

[3] This name occurs also, in the older form *Pogari*, in *Ind Ant*, Vol XIX, p 272, and *Ep Carn* VII i, Sk

124

[4] I have to thank Mr R Sewell for his kindness in verifying my calculations

[1] From the ink-impression
[2] The engraver has written *ghata*, and added *ti* in smaller script under the line.   [3] Read *mattar*.

TRANSLATION.

(Lines 1-4) While the victorious reign of—hail !—the asylum of the whole world, favourite of Fortune and Earth, great Emperor, supreme Lord, supreme Master, ornament of Satyāśraya's race, embellishment of the Chālukyas, king Trailōkyamalla, was advancing in a course of successively increasing prosperity, (to endure) as long as moon, sun, and stars —

(Lines 4-9.) Hail ! she whose foot-lotuses are touched by the diadems of opponent kings, who is pure through bathing in the Ganges, a wishing-jewel to the distressed and master-less, uniform in speech, adorned with virtues, Akkā-dēvi, in the camp around the fortress of Gōkāge, granted land for (the expenses of) plastering the broken and burst (masonry) of the Goṇada-bedaṅgi Jina temple at Vikramapura, and for (the supply of) scent, incense, and lamps, and for sarugi,[1] and for the maintenance of Nāgasēna Pandita, (a friar) of the Hogariya Gachchha of the Varasēna Gana of the Mūla Sangha, and of the friars and nuns residing there and for the cloaks of the nuns —

(Lines 9-18) The lands given (by her) to the god, which she purchased of Dadigarasa, on Sunday, the new-moon day of Chaitra in the cyclic year Sarvvajit, the 969th (year) of the Śaka era, on the occasion of an eclipse of the sun, with the performance of pouring of water, were · Gāṇada Hālūr, a town forming part of the Kisukādu Seventy, granted on sarva-namasya tenure, in its entirety,[2] with usufruct of the citizens (?), one mattar of garden on the north-east of Vikramapura, south of the town, on the south-west of the Muruvadu Waste-land, twelve mattar on sarva-namasya tenure for Paṇḍita Nāgadēva; to the south thereof, twenty-four mattar on sarva-namasya tenure for the drummer Kētōja; north of the town, east of Rāyagaṭṭe, one mattar of garden for the drummer Kētōja; on the west thereof twelve mattar on sarva-namasya tenure (and) one mattar of garden for the stone-mason Sūrōja, (furthermore,) 50 mattar on sarva-namasya tenure in the estate of the seigniory south of the Kappadi tank.

(Lines 19-21   a prose formula of the usual type.)

(Line 22 · the beginning of a common Sanskrit verse.)

No 11—THE BRAHMA-SIDDHANTA OF BRAHMAGUPTA (A.D 628)

WORKING TABLES FOR COMPUTATION OF ANCIENT DATES BY THE TRUE, OR APPARENT, MOTIONS OF SUN AND MOON

BY ROBERT SEWELL (I C S, RETIRED)

A continuation of the author's "Indian Chronography"

311. In para 257 of my article on "*The true longitude of the sun in Hindu astronomy, the Siddhānta-Śirōmani*" (above, *Vol. XIV, p 241*), and again in a later article on *The Siddhānta-Śirōmani*, § 271](Vol. XV, pp 159 sqq), I discussed the question of the values assigned in the seventh century A.D. by Brahmagupta to the twenty-four base-sines of angles in the quadrant, and expressed the opinion that when, but not until, definite assurance was obtainable that the values stated in the only available copies of the *Brahma-Siddhānta* were[3] really those fixed by its author, working Tables framed according to its postulates might safely be prepared for the computation of ancient dates.

---

[1] This term occurs elsewhere, e g in *Ep. Carn.* II (*Sravana Belgola*), No 56, p 52.
[2] Literally, "one."
[3] One MS. copy in the India Office, London, and Benares printed edition

In response to my appeal Mr G R Kaye (Curator, Board of Education, Simla) has been kind enough to assist me He tells me that there can be no doubt but that the values given for the several base-sines in the edition of the *Brahma-Siddhānta*, printed and published in Benares, are correct, and that Brahmagupta certainly made his calculations with a radius (sin 90°) of 3270', discarding that of 3438', which seemingly had been in use in India since the time of the Greeks [1] Mr Kaye went fully into the subject in a very learned article, "*Ancient Hindu Spherical Astronomy*" published in the *Journal of the Asiatic Society of Bengal* in 1919 (*New Series, Vol XV, No 3*), which contains (*Table 8, p 187*) a list of the sine values as determined by the authors of the *Paulisa-, Arya-,* and *Brahma-Siddhāntas* He points out that, when properly applied, the equations of the sun's and moon's centres obtained from the sine-values of Brahmagupta agree with those derived from the values assigned by the other authorities

Accordingly I have prepared the Table of Brahmagupta's sines and resulting base-equations of the sun's centre (*Table LXXXIX below*), and a comparison between these and the equations of the *Siddhānta-Siromani* (*Table XLVII above, Vol XIV, col. 9, and Prof Jacobi's Tables, XXIVB above Vol I*) proves that there is only a very trifling difference whether we use Brahmagupta's, or the older —and later —sine-values By the *Siddhānta-Siromani*, with radius 3438', the sun's greatest equation that of 90°, =2° 10' 31", exact By the *Brahma-Siddhānta*, with radius 3270', it=2° 10 31" 19 We may therefore safely use Table LXXXIX (*below*)[2] and Table LIX (*above, Vol XV*) for the sun's and moon's equations by the *Brahma-Siddhānta*

312 The *Brahma-Siddhānta* was composed by Brahmagupta in A D 628 and is said to have been extensively used in some parts of India, its principal rival being the *Arya-Siddhānta* of Āryabhata, known in later years as the *Laghu-Arya* to distinguish it from the *Mahā-Arya-Siddhānta* of the tenth century This last, called also the *Second Arya-Siddhānta*, seems to have had no great following The *Rājamrigānka*, an astronomical work of A D 1042 introduced, according to the information available to the late Sankara Bālkrishna Dikshit, some important changes into the system of Brahmagupta, but unfortunately no complete copy of it has yet been obtained, and the necessary particulars are not to be found in those fragments which have come to light It is not possible therefore to frame any accurate Tables for calculation by the *Rājamrigānka*, and we must rest satisfied with the assurance of Mr S B Dikshit[3] that the *Siddhānta-Siromani* is the same as the *Rājamrigānka* in the matter of calculation of a *panchāng* Tables for use by the former have already been published by me, comprising the period A D 1100-1750 (*above, Vol XV*)

All the authorities appear to arrive at similar or almost similar results in their computation of the lunar tithis, when worked by the true or apparent motions of sun and moon, but, since they differ in their estimate of the position of the sun's apsis at a given date, they necessarily differ somewhat in their estimate of the moment in each year when the true sun reaches long 0°, the moment, that is, of "true Mêsha-samkrānti" This difference leads to differences in the lengths of the true solar months, and consequently to differences in the intercalation and suppression of true lunar months, which differences, again, occasionally cause differences of a whole lunar month in the beginning of the luni-solar year and differences in the names of some of the lunar months therein

---

[1] It would be interesting to learn his reason for the change Later Indian astronomers reverted to the radius of 3438', which is correct With $\pi=3\ 14159$ the radius=3437 74967 Brahmagupta's radius 3270 implies a ratio $\pi=3\ 303$ The ratio according to Archimedes (B C 250) was 3 14286 The ratio 1 √10 mentioned in the *Sūrya-Siddhānta*=3 16228

[2] Or Table XLVII (*above, Vol XIV*), col 9, also Professor Jacobi's Tables XXIVA, XXIVB (*Vol. I*).

[3] *Indian Calendar*, p 8

But we are now better able to deal with these matters than before   Dates can be easily computed by the true motions of sun and moon according to the *Sūrya-Siddhānta* for the whole historical period from A D 300 to 1900 (*Indian Calendar*)[1], according to the *Ārya-Siddhānta* from A D. 900 downwards (*above, Vol XVI*), according to the *Brahma-Siddhānta (the present paper)* from A D 600 to 1200, and according to the *Siddhānta-Śiromani*, *Rājamrigānka* and other works of the time of Bhāskarāchārya from A D 1100 to 1750 (*above, Vol XV*), these periods comprising the outside limits of use.

And, as regards computation by the mean motions of sun and moon, which system is believed to have been in universal use down to about A D 1100, and perhaps in some places to a considerably later date, we now have Tables for work by the *Ārya-Siddhānta* from A D 500 to 1400 (*above, Vol XVII*), while I hope to be able to publish here after a set of similar Tables for the *Brahma-Siddhānta*, also embracing the outside period of use

All these Tables are framed on the same system, so as to enable calculation to be made as easily and rapidly as possible

Elements of the Brahma-Siddhānta

313 (i) The length of the mean solar sidereal year is 365 2584375 days, or 365^d 6^h 12^m 9^s The *Siddhānta-Śiromani* adhered to this estimate

(ii) Brahmagupta's sines of angles of the quadrant differ from those of the other authorities   His sine of 90°, the radius, = 3270' instead of 3438'   His sine of 3° 45' = 214' instead of 225'   The 24 base-sines are given in Table LXXXIX below

(iii) The equations, however, which are based on these sine-values are practically the same as those of the *Siddhānta-Śiromani* (*compare Table XLVII above, Vol XIV, col 9, and Table LXXXIX below*)   Tables LV, LVI, LIX (*above, Vol XV*) may be therefore used as well for the *Brahma-Siddhānta* as for the *Siddhānta-Śiromani*

(iv) The greatest equation of the sun's centre, that of 90°, is, in 10,000ths of the circle, 60 425925   The greatest equation of the moon's centre is, in similar measurement, 139 858101852   The sum of the two is 200 284027.

(v) The epoch of the Kaliyuga era was mean sunrise, taken as 6 A M , on Friday, 18 February, B C 3102, that moment being 0^h 0^m 0^s Lankā time   This was the moment of mean Mēsha-samkrānti, when the mean sun's centre reached long. 0°   True Mēsha-samkrānti, when the true sun's centre reached long 0°, occurred on Tuesday, 15 February, B C. 3102, at 19^h 52^m 21^s 5 after mean sunrise at Lankā

(vi) The circumference of the sun's epicycle is 13° 40', that of the moon 31° 46'   The epicycles are not contracted at any point.   In this the *Siddhānta-Śiromani* concurs (*Jacobi, Vol I above, p 441*)

(vii) The line of apsides of the sun's orbit has a constant forward shift, the perigee-point (on the longitude of which my calculations are based) moving 0" 144 per ann , or 14" 4 in a century   According to the *Siddhānta-Śiromani* the movement is more rapid, amounting to 1" 044 per ann (*Jacobi, op. cit*).

(viii) The *sōdhya*, or time-interval between true and mean Mēsha-samkrāntis, was, in K.Y 0 or at the epoch of the Kaliyuga era, according to Dr Schram,[2] 2^d 171971 or 2^d 4^h 7^m 38^s 5   With this the *Siddhānta-Śiromani* agrees   But in later years the *sōdhya*, as postulated by the two authorities, differs in value owing to the difference between the two *Siddhāntas* in their estimate of the movement of the sun's apsis   (*See vii above*)

---

[1] Also by the *Indian Chronology* of Dewan Bahadur L D Swamikannu Pillai, M A , whose Tables are framed on a different system

[2] *Indian Chronography*, § 39 D, p 16

(ix) The position of the sun's apsis (perigee) at K.Y 0, the epoch of the Kaliyuga, was 257° 45' 36",[1] and his mean anomaly was 102° 14' 24", or, in 10,000ths of the circle, 284 0

(x) The position of the moon's apsis (perigee) at the same moment was 305° 29' 46"[2]; and her mean anom. was 54° 30' 14", or, in 1,000ths of circle, 151 399691358

(xi) The sun's mean velocity (he is treated as a planet) and the length of the mean solar year being the same both by the *Brahma-Siddhānta* and the *Siddhānta-Śirōmani*, his mean long. at any moment must be the same by both, and so also the length of the mean solar month But the two authorities are not in exact accord as to his true long and the length of the true solar month

Shift of sun's apsis   The śōdhya   Length of true solar year

314 The length of the mean solar year being the same, viz 365ᵈ 6ʰ 12ᵐ 9ˢ, by both the *Brahma-Siddhānta* and the *Siddhānta-Śirōmani*, the first portion of § 273 above (Vol XV) and accompanying Table A apply as well to the former as to the latter But for the latter portion that section and its Table B, the following must be substituted when dealing with the *Brahma-Siddhānta*, the two authorities not being in accord as concerns the matter in question

315 As stated above, the sun's perigee-point according to the *Brahma-Siddhānta* advances annually 0" 144 along the ecliptic, and in consequence of this shift the true sun's velocity at long 0" is a little greater every year than the year before, i e the true sun reaches long. 0°, or the moment of true Mēsha-samkrānti occurs, a little earlier each year   In every year there is a slight increase in the distance and time-difference (our śōdhya) between the mean and true suns at that point of the orbit   Dr Schram has carefully calculated the value of this śōdhya at the moment of true Mēsha-samkrānti at the beginning of several millenniums, and his results for the period embraced in my general working Table LXXXII are stated in the following Table B

TABLE B
VALUE OF ŚŌDHYA BY THE BRAHMA-SIDDHĀNTA

K Y year expired	A.D.	EXACT VALUE OF ŚŌDHYA AT BEGINNING OF CENTURIES				
		days and decimals.	d	h	m	s
3700	599-600	2 1729145	2	4	8	59 8128
3800	699-700	2 1729400	2	4	9	2 0160
3900	799 800	2 1729655	2	4	9	4 2192
4000	899 900	2 1729910	2	4	9	6 4224
4100	999 1000	2 1730165	2	4	9	8 6256
4200	1099-1100	2 1730420	2	4	9	10 8288
4300	1199 1200	2 1730675	2	4	9	13 0320

One result of this shift of apsis is that, by the *Brahma-Siddhānta*, the true sun reaches the 0° point of long. 0ˢ 022032 earlier every year than the year before, and in consequence the length of the true solar year, or the time needed for the true sun to travel from true Mēsha-samkrānti

---

[1] Jacobi, above, Vol I, p 442, § 83, where he gives the place of the apsis (apogee) as 77° 45' 36". See also E. Burgess's " Sūrya-Siddhānta "

[2] Moon's apogee given by Jacobi as 125° 29' 46".

in one year to true Mēsha-samkrānti in the next, is (365^d 6^h 12^m 9^s—0^s 022032) 365^d 6^h 12^m 8^s 977968 [The exact moment of true Mēsha-samkrānti in each year from A D 599 to 1200 is given in the general Table LXXXII below, cols 13-17. It can be tested by the use of Table A, § 273, referred to above, and Table B here given, using the "longer rule" stated in § 273 or in *Indian Chronography*, p 61]

Another result of the shift is that the sun's mean anomaly, or the mean sun's distance from the sun's perigee-point, decreases every year by 0″ 144 or 14″ 4 in a century Reckoning in 1,000ths of circle for valuation of our c (sun's mean anom) in the Tables, 14″ 4 = 0 01 The value of c therefore decreases 0 01 in a century, and this decrease has to be taken into account from K.Y. 0, the epoch of the Kaliyuga This has been done in the preparation of the Tables which follow

The increase of a, b, c, in centuries, years, days and fractions of days.

316 Following on what has been stated, we learn that Tables LIVA and B, which deal with the periodical increases of a, b and c according to the *Siddhānta-Śirōmani*, may safely be used for calculation by the *Brahma-Siddhānta*, with the one reservation as to the increase of c in a century a being the distance of mean moon from mean sun, and the *longitude* of the mean sun not being affected by the shift of apsis, but only his *mean anom* , or distance from the point of the apsis, it appears that the rate of increase of a must be same by both authorities.

As to the rate of increase of c it is, by the *Siddhānta-Śirōmani*, centennially less by 0 0805 (§ 273 above), and this was taken into account in the preparation of the heading of Table LIVA, where a footnote is appended shewing what the rate of increase would be per century if no such deduction had been made   This rate is, in thousandths of a circle, 997 690008075 in a century of 36525 days, and 0 427795618 in a century of 36526 days By the *Brahma-Siddhānta*, the centennial decrease in the sun's mean anomaly being 0 01, the amount of increase of c per century is, for a century of 36525 days, 997 678896964, and for a century of 36526 days is 0 416684507. The difference between the two authorities in shorter periods may be ignored except in some extraordinarily close case   If it is ever needed, the increase in c in one year may be reduced by 0 0001 from the Table quantity

Otherwise Tables LIVA and B stand good for calculations by the *Brahma-Siddhānta*.

The values of a, b, c at the beginning of K Y 3700

317 The general Table LXXXII below begins from the beginning of K Y 3700 expired. Table LXXXVI states the value of a, b, c at that moment, and at the similar moment at the beginning of subsequent centuries   It is necessary therefore to explain how these figures were calculated.

(1) *The value of a (distance of mean moon from mean sun) in K Y 3700* According to Hindu astronomers mean moon and mean sun were in conjunction at the moment of mean Mēsha-samkrānti in K.Y 0, the epoch of the Kaliyuga, or, in other words, at that moment $a = 0$ In the 37 succeeding centuries there were 32 common and 5 defective centuries   Taking the century values of a given in the heading of Table LIVA and multiplying for 32 common and 5 defective centuries, we arrive at the figure 6567 108945284 as the value of a at the beginning of the 37th century K Y., whole revolutions of 10,000 each being omitted   From this figure has to be deducted,—according to the working system of the *Indian Calendar*, which follows Largeteau and Jacobi,—the sum of the greatest equations of sun and moon, viz 200 284027 (*above § 313, iv*) This gives us the value of a at the beginning of K Y 3700 (expired) as 6366 824917506 [1]

---

[1] Professor Jacobi differs by about 17 units He gives the figure 6384·0 (*Vol XI above, p 167, Table IXA*) I can give no explanation of the reason for this, and can only state fully, as in the text, my bases of calculation.

Now this value stands for mean sunrise of Sunday, 22 March, A D 599, *i c*, for the sunrise succeeding the moment of occurrence of mean Mīsh ī-saṁkrānti in K Y 3700, but in all my Tables the calculation is for mean sunrise on the actual day of that occurrence, and we have therefore to deduct one day's value of *a* (viz 333 631985412—Table LIVA above) from the above estimate This done, we have, for mean sunrise on Saturday, $a = 6028\ 192932091$

(ii) *The value of* b (*moon's mean anom*) *at the same moment* At the *epoch* of the Kaliyuga the moon's mean anom was, as stated above (§ *313, x*). in 1,000ths of a circle, 151 399691358 Using the century figures of *b* in the heading of Table LIVA, and multiplying for 32 common and 5 defective centuries, it is found that, excluding whole revolutions of 1,000 each, the result is 604 144838202 Adding the value of *b* at K Y 0, as above, we have at beginning of K.Y 3700, for the value of *b*, 755 544529560 [1] But this (*see above,* i) was its value at mean sunrise on Sunday, 22 March, A D 599 Deducting one day's value of *b* (36 291649786) the fixture for mean sunrise on Saturday, 21 March, amounts to 719 252579774

(iii) *The value of* c (*the sun's mean anom*) *at the same moment* The correct increase of *c* by the *Brahma-Siddhānta* in centuries of 36525 and 36526 days has been given above in the latter part of § 316 Multiplying those quantities for 32 common and 5 defective centuries, and discarding whole revolutions of 1,000 each, we arrive at the increase, after 37 centuries, of 1 728389044 To this has to be added the value of *c* at K Y 0 (*above,* § *313, xi*), viz 254 0 The value of *c*, therefore, at mean sunrise of Sunday 22 March, A D 599, was 285 728389044 [2] Deducting the *c* for one day (2 737787543) we have finally, for mean sunrise on Saturday, 21 March, *c*=282 990601501

The entries, therefore, for the aforesaid Saturday of K Y 3700 in Table LXXXVI below are

$$a = 6028\ 1929$$
$$b = 719\ 2529$$
$$c = 282\ 9906$$

The rest of that Table follows by addition of the proper century values

Duration of true solar months

318 It has been mentioned above (§ *313, xi*) that, while the length of the mean solar month must be the same both by the *Brahma-Siddhānta* and the *Siddhānta-Śiromani*, the lengths of the true solar months according to the two authorities differ because of their different estimate of the shift of the sun's apsis Thus in K Y 4000, the middle year of my general Table LXXXII below, the sun's perigee-point according to the *Siddhānta-Śiromani* was at long 258° 55' 12", while by the *Brahma-Siddhānta* it was at long 257° 55' 12' Hence the velocity of the true sun (he is always considered as a planet) at the several true solar *samkrāntis*, when the true sun's centre enters the several signs, is not the same by the two authorities quoted And this has necessitated the preparation of a new Table (*LXXXIIIA below*), giving the lengths of the true solar months and increase of *a*, *b*, *c* therein individually and collectively according to the *Brahma-Siddhānta*

There being in K Y 4900 a difference of only 4' 48" between the positions of the sun's perigee, as estimated by the *Brahma-Siddhānta* and by the *First Ārya-Siddhānta*, the former placing it at 257° 55' 12" and the latter at 258°, it was considered sufficiently safe to use Table XLIX (*above, Vol XIV*) for the true sun's velocity at different points of his orbit in hours and minutes, and Table L-A for seconds His true long at each *samkrānti* was computed from his known mean longitude + the equation of the centre, which was calculated in each case

---

[1] Professor Jacobi's figure for this is 758 1, in my notation, against my 755 5
[2] This agrees with Professor Jacobi's fixture, which, measured from perigee and in my notation, is 285·7.

Thus was obtained the length of each month in days, hours, etc. For the increase of a, b, c during the periods so determined Tables LIVA and B, which are applicable to the *Brahma-Siddhānta* as well as to the *Siddhānta-Siromani*, were used.

Note on work for the nakshatra

319. In our method of work $s =$ the true sun's longitude and $t =$ the *tithi*-index (which shews the true moon's distance from the true sun) at the given moment $s + t =$ the *nakshatra*-index n, which gives the true moon's place in the heavens, or her apparent longitude   The value of t is ascertained by the ordinary calculation for a date   The value of s has to be found.

By the *Árya-Siddhānta* the formula for finding s, c being the sun's mean anom. at the given moment, is $s = (c \times 10) + 7226 -$ eqn. c , where the factor 7226, which represents in 10,000ths of circle the long of sun's perigee *plus* the sun's greatest equation, is a constant [1]

By the *Sūrya-Siddhānta*, as exemplified in the *Indian Calendar* Tables, the numerical factor is not 7226, but varies in the period A.D 900 to 1900 from 7206 5077 to 7207 4035 being fixed for rough work at 7207. The variation is due to the postulated shift of the sun's perigee-point.

By the *Siddhānta-Siromani* there is, for the same reason, a variation in the numerical factor, *viz.* from 7252 6466 in A.D. 900 to 7259·0910 in A.D. 1700,—roughly from 7253 to 7259.

By the *Brahma-Siddhānta* the numerical factor varies from 7224 5370 in A D. 600 to 7225·2037 in A D. 1200 (the limits of the general Table LXXXII below) For rough work therefore by this authority the formula is $s = (c \times 10) + 7225 -$ eqn c

For more accurate work the value of c should be calculated (by the Tables) with decimals, and instead of multiplying c by 10 its value should be changed from thousandths of circle (as in the Table-result) to ten thousandths by moving the decimal point one place to the right [2] ; the value of eqn c can be obtained from Table LVI with great accuracy , and the numerical factor can be taken from the following summary.

K.Y century.	A D century	Exact factor in formula	Roughly.
3700	599 600	7224·5370	
3800	699-700	7224·6481	
3900	799-800	7224 7592	
4000	899 900	7224·8703	7225
4100	999-1000	7224 9814	
4200	1099-1100	7225·0926	
4300	1199-1200	7225 2037	

Examples.

It is not necessary to give a number of examples of work by the present Tables   The system of calculation being exactly the same as that of the *Indian Calendar* and throughout the present series of articles, the examples already published for computation by other authorities

---

[1] See *Indian Calendar*, § 156 p 97 , article on the *Siddhānta-Siromani*, above, Vol XV, § 273, " *Note on work for the nakshatra* ", article on the *First Árya-Siddhānta*, Vol XV above, § 302 , and the several examples given in those papers

[2] Whole revolutions are not necessary for present purposes, and in our system when $a = 10,000$ a whole synodic revolution of the mean moon has been completed

will suffice, *the proper Tables being used*, for work by the *Brahma-Siddhānta*. These Tables are specified in the following pages.

Examples have been given in all my foregoing papers, but perhaps the fullest series is to be found in the article on the *First Ārya-Siddhānta* (*above, Vol XVI*).

Tables for calculation by the Brahma-Siddhānta

The system of work for computation of an Indian date will be readily understood by perusal of examples 2 to 11 appended to my paper (*above, Vol XVI*) on the *First Ārya-Siddhānta*, but the Tables used are of course not all the same. The following list shews how accurate results by the *Brahma-Siddhānta* are to be obtained in calculation by the movements of true sun and true moon

Table LXXXII below is the general working Table for the *Brahma-Siddhānta* for the period A D 599 to 1200 (K Y. 3700 to 4300 expired).

For names of months and of nakshatras in different parts of India, see Table LXII above (*Vol XVI, " The First Ārya-Siddhānta "*).

For collective duration of mean lunar months see Table LXIIIA of the same article, or Table III, Part I, *Indian Calendar*

Table LXXXIIIA below gives, by the *Brahma-Siddhānta*, the length of the true solar months and their collective duration, with the corresponding increases of *a, b, c*

Table LXXXIIIB states the exact value of *c* and of " equation *c* " at the several true *samkrāntis*, or moments of the true sun's centre reaching the several signs

Table LXXXIIIC shews the value of *c* and of " equation *c* " at the beginning of each century of the Kaliyuga

For the increase of *a, b, c* respectively in defective and common centuries, and in common years and Leap-years, see Table LIVA, heading, but note that by the *Brahma-Siddhānta* the increase of *c* in a defective century of 36525 days is 9°7 678896964 and in a common century of 36526 days is 0 416684507 Tables LIVA and B contain the necessary figures for days, hours, minutes and seconds

Table LXXXIV gives the values of " equation *b*," and Table LXXXV those of " equation *c*," for easy calculation by whole numbers, corresponding respectively to Tables VI and VII of the " *Indian Calendar*," which stand for the *Sūrya-Siddhānta*

For the more detailed values of " equation *b* " and " equation *c* " of moon and sun use Tables LV and LVI above, Vol XV, as framed for the *Siddhānta-Śiromani*

For the indices of *tithis* (*t*), karanas, yōgas (*y*) and *nakshatras* (*n*) see Table VIII, " *Indian Calendar*," or Table LXVIII (*above, Vol XVI, " The First Ārya-Siddhānta "*)

For serial numbers of days of a year reckoned from January 1st use Table IX, " *Indian Calendar*," or Table LXIX (*above, Vol XVI, " The First Ārya-Siddhānta "*)

For conversion of *tithi*-indices and *tithi*-parts into time Table X, " *Indian Calendar*," is to be used, or Table LXX (*above, Vol XVI, " The First Ārya-Siddhānta "*)

For finding the week-day according to the European Calendar for any century from A D. 0 to 2300 see Table LXXI (*above, Vol XIV, " The First Ārya-Siddhānta "*), or Tables XLIA and B (*pp 176, 177, " Indian Chronography "*)

Table LXXXVI gives the values of *a, b, c* at the beginning of each century of the Kaliyuga by the *Brahma-Siddhānta*

Table LXXXVII gives the same for odd years of those centuries

Table LXXXVIII states the daily sunrise values of *a, b, c* for a month previous to the day of Mēsha-samkrānti

Table LXXXIX sets forth the 24 base-sines of angles of the quadrant according to Brahma-gupta, and the corresponding equations of the sun s centre

TABLE LXXXII

CONSTRUCTION OF TABLE

The Table is constructed on the lines of Table I of the *Indian Calendar* and is to be used in the same way   The columns are numbered similarly.

Col 7.   The *samvatsara*-name,—i e the name of the Jovian cycle—, of the year is given as determined by my previous calculations (*above, Vol XIII Table XLII*)   Entries in italics point to cases where this *samvatsara*-name differs from that given to the same year by *Sūrya-Siddhānta* reckoning.

Col 8.   Months noted in roman characters are intercalated (*adhika*) lunar months   Those in italics are suppressed (*kshaya*) months

Cols 13, 19.   Figures in brackets give the serial number of the day [measured from January 1st.

Col 23   *a*=distance, at mean sunrise, of mean moon from mean sun, or phase of moon stated in 10,000ths of circle, and reduced by the sum of the greatest equations of sun and moon so that calculation of the equations of *b* and *c* may always be additive.

Col. 24   *b*=mean anomaly of moon or mean moon's distance from perigee-point of apsis stated in 1,000ths of circle

Col. 25   *c*=mean anomaly of sun or mean sun's distance from perigee, stated in 1,000ths of circle.

REMARKS

A.D 629-630, *cols. 19, 20*   A very close case   The moment of true new moon was less than half a minute after mean sunrise at Lankā on Wednesday, 1st March   And the first *śukla tithi* of the year ended after mean sunrise on Thursday, 2nd March, which was therefore by rule the first civil day of the luni-solar year   If new moon had taken place more than half a minute earlier the first civil day of the year, " Chaitra sukla 1," would have been 1st March

A D 968-69, *col 8*   At the Kumbha *samkrānti* the true moon was waning.   The moment of the next, the Mīna, *samkrānti* occurred about 2½ minutes after the moment of true new moon, so that the true moon was waxing at the Mīna *samkrānti*   Hence the lunar month Phālguna was intercalated   According to the 19-year sequence we should have expected an intercalation of the lunar month Chaitra next following   The sequence shows similar irregularities when examined by other authorities, but only very rarely

A.D 974-75, *cols 19, 20*   Close case   The 1st true new moon after the Mīna *samkrānti* occurred 3 minutes before mean sunrise at Lankā on 25th February A D 974   That therefore was the day " Chaitra śukla 1."

A D 963-64, 982-83, *col 8*   In both these years an intercalation of the lunar month Śrāvana instead of Āshādha would have been more in accordance with the 19-year sequence, seeing that Śrāvana was the intercalated month in A D 1001 and 1020, but prior to A D 963 at intervals of 19 years there had been eight intercalations of Śrāvana, and towards the close of such a run a change of conditions generally becomes apparent

A.D. 1001-2, 1020-21, *col 8*   See the previous note   If in these two years the conditions had made necessary an intercalation of Āshādha, the 19-year sequence would have been uninterrupted

A.D 1128-29, *col 8*   By the *Brahma-Siddhānta* the intercalation of Phālguna was clearly demanded   See Remarks preceding Table LX (*above, Vol XV*), on the same year as worked by the *Siddhānta-Śiromani.*

No 12—THE KEDARPUR PLATE OF SRI CHANDRA DEVA

By Nalini Kanta Bhattasali, M A , Curator, Dacca Museum

In the October number of the *Dacca Review* for 1912, Mr. J T Rankin I C S published a note given him by the late lamented scholar B abu Gangadas .. L ... "U C ... a copper plate inscription of Śrī-Chandra-Dēva found at Idilpur in the Faridpur District of Bengal This note for the first time established the fact that a Buddhist ... .. "Chandra" at the end of their names had ruled in East Bengal with Vikramapura as their capital about the 10th or 11th century of the Chr ... L ... ... in Bengal have been busy thenceforth, dis ... the position of the Chandras and of Vikrama-pura in the chronology of their country The discovery of a ... plate ... of Śrī-Chandra-Dēva at Rāmpāl in the Munshiganj sub division of the Dacca D ... in April 1917 by Prof. Rādha-Gōvinda Basāk, M A gave a further impetus to the ... P J Basāk published this plate first in the *Sāhitya* and *Bulletin* ... ... *Sāhitya* for 1320 B S and finally in the *Epigraph ... Indica ...* Vol XII p ... 136

The present plate is the third of Śrī-Chandra-Dēva It was found in April 1919, in excavating earth from a ditch at Kedarpur in the Mādāripur subdivision of the Faridpur District of Bengal It was preserved in the custody of the ... and ... of the Kedarpur Middle English School I came to know of the find from a friend ... to ... ... for the Dacca Museum by the Hon'ble Mr T Emerson, C I E , I C S through the kind offices of Mr J N Roy, I C S, Magistrate of Faridpur, and Mr N S r, Sub-Divisional Officer of Mādāripur.

The plate measures 8½' × 7½', and is therefore slightly smaller than the plate published by Mr Basāk, which measures 9' × 8" The Royal Seal of the Chandras is attached to the middle of the top of the plate It displays the *Wheel of the law* with two conchant deer on the two sides, symbolical of the first "Turning of the Wheel of the Law" at the Deer Park,—the present Sārnāth near Benares It is noteworthy that the Pālas of Bengal who preceded the Chandras, and who were Buddhists as well, had similar devices on their seals The rant of Śrī Śrī-*Chandra-Dēva*[ḥ] is written in relief below the Wheel in the present seal

The plate is incomplete and appears to be no grant at all, but only a plate kept ready, with the stereotyped portion of the grant inscribed in the office of issue, to be filled in with the necessary remaining portions as occasion arose The plate is full of engraver's mistakes of a serious nature It may be noted that Kēdārpur, where this plate was found, contains the ruins of a royal settlement surrounded by a broad ditch as well as a big silted up tank, commonly associated with the memory of Kedār Rāy, one of the famous twelve chieftains who ruled Bengal before the country was completely dominated by the Mughals Kedār Rāy had his capital at Śrīpur, which, from the description of Ralph Fitch, appears to have been a flourishing town in 1585 , and the reasonableness of having a second capital, only a few miles off, is not very apparent Of course a thousand and one contingencies might have taken the present plate to Kēdārpur, where it has now been found, but the find of this unfinished plate also makes it possible that the ruins at Kēdārpur may be those of the Chandras who preceded Kedār Rāy by no less than five hundred years

The plate is inscribed on one side only and there is a vacant space of about two inches at the bottom The inscription contains 18 lines of writing The letters are 24 to 30 inch in height and are in most places well inscribed Mistakes of engraver or scribe are, however,

numerous and they have rendered the preparation of a correct text an undertaking of exceptional difficulty.[1]

The inscription refers to the reign of Śrī-Chandra-Dēva of the Chandra family of Kings who held sovereignty in East Bengal for some decades before the rise of the Varmans and the Sēnas in that part of the country, towards the end of the Pāla rule in North Bengal. It is written in what may be called the Bengali Script of the 10th-11th century A.D. The language of the inscription is correct Sanskrit verse, except in the portions spoiled by engraver's mistakes. The last three lines are in prose.

There is nothing very special as regards orthography. The use of va for ba is almost the rule in the later East Indian epigraphs, there being no discrimination between them, as in the modern Bengali language. The avagraha is once used and once omitted The spelling of the word nistriṅśa with ṅ is remarkable Superimposed r has doubled almost all consonants.

From a comparison of the abstract of the Idilpur plate of Śrī-Chandra published in the *Dacca Review*, referred to above, with the contents of the present plate, it is evident that the two plates are copies of the same draft. The Idilpur plate seems to have an extra *Ślōka* towards the end, borrowed from Śrī-Chandra's Rāmpāl plate, which is otherwise the copy of a draft different from that of the Idilpur and the Kēdārpur plates. It should be noted, however, that the opening invocatory *Ślōka* is identical in all the three plates

Śrī-Chandra seems to have been the only king of the Chandra family who was powerful enough to issue copper-plate grants, as the three plates hitherto discovered are all in his name. In order, therefore, to bring together all the epigraphical material available for his history, I quote below the necessary portions from Bābu Gangāmōhan Laskar's abstract of the Idilpur plate, as published in the *Dacca Review* The plate is reported to exist still, but it is in the custody of people who are unwilling to show it to anybody again.

[2] "The inscription gives the names of three kings —(1) Suvarnna-Chandra.   (2) His son Trailōkya-Chandra   (3) Trailōkya-Chandra's son (Śrī)-Chandra-Dēva   The last of these kings issues a command from his victorious camp at Vikrampur making a gift of certain lands at the village called Lēliyā in the Kumāratālakā sub-division (*mandala*) of the Satata-Padmā-vātī district (*vishaya*)   The nāme Satata-Padmāvātī literally means 'with-bank-Padmā-house' and was most probably the name of a district on the banks of the Padmā river. The names of some of the donees are still legible and the measures of the area of the granted lands are called *drōnas* and *pāṭakas*, as in the Āsrafpur plates   Paramount titles such as *Paramēśvara, Parama-bhaṭṭāraka* and *Mahārājādhirāja* are attached to the names of (Śrī)-Chandra-Dēva. The title Parama-Saugata (the devout worshipper of Sugata, i e Buddha) is prefixed to the name of the donor   The characters used are probably of the 12th century type of the Bengali alphabet The seal attached to the top of the plate resembles the seals found on the plates of the Pāla kings of Bengal   The inscription under notice is very important, as it, like the Āsrafpur plates of Dēvakhadga, shows the existence of Buddhist kingdoms in East Bengal in the period not much anterior to the conquest of Bengal by the Mussalmans

"   .   The plate is inscribed on one side fully and on another side partly   The writing on the second side has become almost defaced   This defaced portion contains the names of the donee and the particulars of the lands granted   There are altogether 36 lines of writing An analysis is given below —

Lines 1-4   Contain a verse in honour of Buddha, probably.

Lines 4-5   State that there was a king named Suvarṇṇa-Chandra who was neither purified in fire nor measured on the scales (like gold) but was by nature endowed with greatness (heaviness) and whose deeds were good.

Lines 5-6.   State in a verse why the king was called Suvarṇṇa-Chandra.

Lines 6-9   The above king got a son named Trailōkya-Chandra, whose look was sacred, who was afraid of the next world, by whom the living world was consoled, whose meritorious deeds were well known throughout the three worlds.

Lines 9-10.   Some further epithets of the same king who satisfied his desire of conquering the whole world and who extinguished the fire of his enemies.

Lines 11-13.   More eulogistic epithets (of Trailōkya-Chandra-Dēva).

Lines 14-15.   The above king had a son named (Śrī)-Chandra who was like Indra and whose prowess was like Indra and who was born at the auspicious moment and the signs at whose birth were indicative of royal fortune.

Lines 15-18.   Some eulogistic epithets of (Śrī)-Chandra-Dēva.

Lines 18-19   From the victorious camp pitched at Vikramapura,

Line 20, the devout worshipper of Sugata (Buddha), the meditator of the feet of (i.e. the son of) Mahārājādhirāja Trailōkya-Chandra-Dēva, the Paramēśvara, the Paramabhaṭṭāraka,

Line 21, the Mahārājādhirāja, the Śrīmān, Śrī-Chandra-Dēva, being in good health and having done honour to all the following royal officers and villagers assembled at the village of Lehīyā,

Line 22, in the Kumāratālakā-maṇḍala of Satata-Padmāvā(ti) district,

Line 28, thus commands the above officers . . . .

Lines 29-30   Contain the names of the donees."

The following is an abstract of the present Kēdārpur plate :—

The inscription opens with a salutation to the Buddha, the Dharmma, and the Sangha,—the three jewels of the Buddhist faith   It then goes on to say that there was one Pūrṇṇa-Chandra by name who was the possessor of large forces.   He was neither of royal birth nor of pure caste, but he obtained a son Suvarṇṇa-Chandra by name, resplendent as gold (v. 3).   Suvarṇṇa-Chandra was a famous man of religious character, and his son was Trailōkya-Chandra (v. 4) Trailōkya's conquests extended far and wide and he was a terror to his foes (v. 5).   Trailōkya's son was Śrī-Chandra who was extremely virtuous (v. 6).   He was a great conqueror whose fame at arms had reached the heavens (v. 7).   With this last king Śrī-Chandra-Dēva who was to have issued this plate from his victorious capital at Śrī-Vikramapura the inscription stops

I edit the inscription from the original plate, now in the Dacca Museum.

Seal.

श्री श्रीचन्द्रदेव[:]

No 13—A NOTE ON THE DATES OF THE GUPTA COPPER PLATES FROM DAMODARPUR.

By K. N. Dikshit, M.A.

The discovery of the Damodarpur plates has thrown new light on the fortunes of the Gupta dynasty in Eastern India. The plates have been edited by Mr. Radha Govinda Basak above Vol. XV., pages 113-145. I wish here to point out certain inaccuracies in the readings of the dates as read by Mr. Basak, which I first noticed when I read his paper and subsequently verified by reference to the original plates, now preserved in the Varendra Research Society's Museum at Rajshahi.

The date of the second plate which has been read by Mr. Basak as 129 is to be read as 128. The unit figure which is a vertical line with a slight bend, and a seriph or small horizontal line at the top end, must be taken as the symbol for 8, while the symbol for 9 has a loop at the top.

The fifth plate has lost the name of the reigning Gupta sovereign, but the date has been fairly well preserved. It has been read as 214, but I see no trace of a 'ten' in the second figure, but a clear 'tha' denoting 20, the date thus being 224. That some Gupta sovereign held sway over North Bengal as late as 224 G.E. or 543 A.D., that is eleven years after the date of the Mandasor pillar inscription of Yaśodharman (532 A.D.) is an important result. It is no longer possible to assume with Mr. Basak that the Gupta Emperor who made the grant was Bhānugupta [1] as the difference between the date of the plate and the only known date for Bhānugupta (स्त्र, 191 Gupta Era) is now 33 years. The fourth and fifth plates seem to be separated by a wider margin than that existing between any other two plates of the Damodarpur find. The intervening period of sixty years, roughly 164—224 Gupta Era (=483—543 A.D.) witnessed the gradual diminution of the Gupta dominion and the slow shifting of the centre of their power to the east. It also witnessed the rise and fall in succession of the Hūṇa chieftains Torāmāṇa and Mihirakula, and the transitory success of the Mālava chief Vishṇuvardhana Yaśodharman. Other dynasties like the 'Vardhana' kings of Thanesvar and the Maukhari rulers of Kosala were coming into power on the western outskirts of the Gupta Empire, the latter dynasty in particular having carried on an incessant warfare in Oudh and adjacent regions with the Guptas. It was probably the ascendancy of the Maukhari rulers in Ayodhyā that drove the 'noble born' Amṛtadēva (the donor of the fifth Damodarpur plate) from his native place Ayodhyā to the distant Pauṇḍravardhana province, which may seem to have been one of the last retreats of the Imperial Guptas. The Jaunpur inscription of the time of the Maukhari Īśvaravarman, though not dated, must belong to the same period as the fifth Damodarpur plate, as we know from the Haraha inscription that Īśvaravarman's son Īśānavarman had fully established himself in Oudh by 555 A.D.

No 14.—SOMALAPURAM GRANT OF VIRUPAKSHA SAKA 1389

By K. V. Subrahmanya Aiyar, B.A., M.R.A.S., Ootacamund.

This set of three copper-plates, marked No 2 in Appendix A of Rao Bahadur H. Krishna Sastri's Annual Report on Epigraphy for 1913-14,[2] is edited below for the first time with the help of one set of impressions kindly placed at my disposal by him.

The plates are reported to belong to a Kuruba ryot of Sōmalāpura in the Bellary taluka of the Bellary District. They were unearthed years ago while digging foundations for a house; but were secured in 1913, for the examination of the Assistant Archæological Superintendent,

---

[1] [The reading at the end of l 1 in Plate V of the Damodarpur Plates is probably Kumāra.—Ed.]

[2] See also p 95, paragraph 25, of the same report.

Southern Circle, through the kind offices of the Tahsildar of the taluka, by the then Kanarese
Epigraphical Student, Mr. K Rama Sastri. Regarding the description of the plates Mr Krishna
Sastri has made the following note on the cover of the ink-impressions he sent to me :—

"Three plates with rounded tops of which the first and last are written on the inner sides
only. They are held together by a ring which passes through a round hole bored at the top of
each plate On the ring, which is nearly 2¾" in diameter and ¼" in thickness, slides a circular
seal shaped like a signet ring The seal measures 1½" in diameter and bears in relief on its
surface at the top the sun and the crescent and a standing boar facing the proper left Below
it is what looks like a floral device. The plates measure 9½" by 6⅛" The circular top measures
1½" from the base to the middle of the arc."

The plates are written in the Nandi-Nāgarī characters throughout excepting the syllables
"Śrī-Virūpāksha" at the end which are in Kannada The inscription is in a good state of pre-
servation the only places where the letters appear slightly damaged are at the commencement
of lines 20 and 68

The language of the inscription is Sanskrit verse from beginning to end. The description
of the boundaries in dēśabhāshā, promised by verse 46 (ll. 71, 72), is left blank for reasons
which cannot be guessed at this distance of time.

As is usual in the copper-plate grants of Vijayanagara kings, this record contains evident
mistakes of spelling such as the frequent substitution of sa for śa (ll 1, 4) and vice versâ (ll. 1,
3), tha for ta (ll. 5, 16), dha for tha (1 43), omission of visarga (ll 5, 8, 13) and its retention
in places where it has been changed into स (l. 42); unnecessary insertion of anusvāra (ll 37 and
38); etc Conjunct consonants are sometimes written side by side as in द्दयालु (l 2), पाषदरक्ष°
(l. 37) and खड्गायत. (l 33). In चतुषविं (l. 45) and भूद्य (l 12) the rules of sandhi have
not been properly observed न has been unnecessarily doubled in स्मिन्निदा° and visarga has
been changed into double र in गुर्व्वरेकं° (l. 27). Other instances of mistakes are चौत्र for सर्व
(l 45), सर्व for सर्व (l 13) and येनेष for वेनेष (l 17) As all the mistakes occurring in
the record have been corrected in the text or in the foot notes, they have not been given here in
more detail.

The first three verses are invocations addressed to Śiva, Ganapati and the boar incarnation
of Vishnu The fourth introduces the Moon, and the fifth refers to Yadu and Vāsudēva. The
historical portion commences with Saṅgama (v. 6). His son was Bukka. When he became king,
the prosperity of the Karnāta kingdom was permanently established (vv. 7 and 8). Harihara
(II) was born to him, he filled the quarters with the wealth of his charity (v 9) He had a
son named Pratāpa-Dēvarāya (I) by whom the Turushkas and hostile kings were overcome (vv.
12 and 13) His queen was Dēmāmbikā and their son was Vijayabhūpati, renowned for his
wisdom (v 14). Vijayabhūpati's son by Nārāyaṇīdēvī was Pratāpa, also called Praudhapratāpa
(v. 15), who obtained from his elder brother the kingdom of Ghaṇādri (v. 16) His son by
queen Siddaladēvī was Virūpāksha The titles Rājādhirāja (v 18), Rājaparamēśvara
(l. 42), Mūrurāyaragaṇḍa, Pararāya-bhayaṅkara and Hindurāya-Suratrāna and Chhurikā-
bhālanētra (v. 20) are given him It is said that he obtained the kingdom by his own prowess
and ascended the ancestral throne on the bank of the Tungabhadrā, in the presence of god
Virūpāksha (vv. 21 and 22).

In speaking of the ancestors of Virūpāksha, our record refers to the valour of Bukka I, the
munificence of Harihara II, the prowess of Dēvarāya I and the wisdom of Vijayabhūpati. The
same is pithily expressed in a single couplet elsewhere[1] thus :—

भक्तौ वृक्षमहीपालो दाने हरिहरेश्वर: ।
शौर्य्ये श्रीदेवराजोभ्रो ज्ञाने विजयभूपति: ॥

---

[1] South-Ind Inscr., Vol I, p 163, verse 16.

The statement that when Bukka I, one of the two earliest sovereigns of the Vijayanagara dynasty, ascended the throne, the prosperity of the Karnāṭa kingdom was well established, is of particular interest to the student of history, as it seems to hint the probable fact that the Vijayanagara dominion was founded on the ruins of the Hoysala (i.e. the Karnāṭa) dominion, which was wrecked by the Muhammadan invasions of South India ; and shows also that the inveterate feud between the Vijayanagara kings and the Muhammadan monarchs should have risen even from the very inception of the new Hindu kingdom.   There is not much doubt that the country over which Bukka ruled was a portion of the Karnāṭa empire and that the Vijayanagara kings were the political successors of the Hoysalas

Of greater importance are the statements of our plates that Pratāpa, also called Prauḍhapratāpa, was the younger son of Vijayabhūpati, that he obtained from his elder brother,—showing clearly that he held a subordinate position under him,[1]—the government of Ghanādri, and that Virūpākaha II was his son.

The Satyamaṅgalam plates of Dēvarāya (II)[2] state that Vijayabhūpati had two sons of whom the elder was called Dēvarāya and the younger Pratāpi-Dēvarāya.   From this it is clear that both the sons had in common the name Dēvarāya   The existence of these two sons of Vijayabhūpati, though not with their names specified, is recognised in the three copper-plate grants of Virūpāksha known to us so far, viz. the Sajjalūr plates,[3] the Śrīśailam plates[4] and the present Somalāpuram grant   These, being directly concerned in tracing the main line of Virūpāksha, naturally enough, omit to mention the name of the elder   While the Śrīśailam plates call the younger Pratāpi-Rāya, the other two give the additional information that he was renowned by his title Prauḍhapratāpa   Thus, from all these sources it can be gathered that while the first son of Vijayabhūpati was known by the mere name Dēvarāya—with or without the common addition of Vīrapratāpa which is generally assumed by Vijayanagara kings—the younger was always called Prauḍhapratāpa or Pratāpa-Dēvarāya which is sometimes supplemented in stone records by the epithet gajaveṭṭai-kaṇḍaruṭiya.   Among the stone records of Vijayanagara kings, the following are clearly attributable to the second son of Vijayabhūpati :—

No. 92 of the Madras Epigraphical collection for 1918.	Dated in Śaka 1351 in the reign of Pratāpa-Dēvarāya, son of Vīra-Vijayarāya.
No. 91 of 1918 . . .	Dated in Śaka 1352 in the reign of Prauḍha[5]-Dēvarāya-Mahārāya, son of Vīra-Vijaya-rāya-Mahārāya.
No. 68 of 1918 : . . .	Dated in Śaka 1367 in the reign of Pratāpa-Dēvarāya-Mahārāya, son of Vīra-Vijaya-rāya-Mahārāya

Thus it is beyond doubt that the second son of Vijayarāya or Vijayabhūpati was not only called Pratāparāya and Prauḍhapratāpa, but had the additional name Dēvarāya suffixed to these names   Further, the Madras Museum plates of Dēvarāya II[6] refer to a younger brother of his named Śrīgiri who was governing Marntakanagara in A.D. 1424-5 and the Satyamangalam plates of Dēvarāya II, dated in the same year, imply that his younger brother Pratāpa-Dēvarāya was

---

[1] If Mr. Rice has correctly read niyāgi-ajāprāptam=anādi-rājyam (p 136 of Ep. Carn, Vol. III), it is evidently a mistake of the engraver for nijagrajādi=prāpta-Ghanādri-rājyah given in our plates. His remarks (ibid, introduction, p 23) that Pratāpa or Prauḍha-pratāpa obtained the immemorial kingdom from his elder sister requires modification.

[2] Ep. Ind., Vol III, p. 37 f.

[4] Ep. Ind , Vol XV, pp 8 ff.

[4] This is a shortened form of Prauḍhapratāpa.

[6] Ep Carn , Vol III, pp 185 ff , XII 191.

[6] Ep. Ind , Vol VIII, pp. 306 ff.

ruling over the same district There is thus no doubt that Pratāpa-Dēvarāya is identical with Srīgiri and this fact has been pointed out by Mr Venkayya in his *Annual Report* on Epigraphy for 1906 (p 82) It may be added that the name Praudhapratāpa-Dēvarāya was already assumed by Dēvarāya I [1] A stone inscription of this second son under the name Srīgirināthā-Udayār, dated in Saka 1348, has also been discovered [2]

In the face of the inscriptional evidence furnished in a number of genuine copper-plate grants and stone records referred to above, we do not attach any value to conclusions differing from recorded facts as have been arrived at by the late Mr T. A Gopinatha Rao in editing the Srīsailam plates, where he has vainly attempted to show that there was but one son of Vijayabhūpati, by name Dēvarāya He has advanced no valid grounds for disproving the identity of Srīgiri with Praudhapratāpa-Dēvarāya, the second son of Vijayabhūpati.

The first two sons of Vijayabhūpati being known by the name Dēvarāya, it is but natural to mistake the sons of one of the Dēvarayas for those of the other. But the fact mentioned in our inscription, viz that Virūpāksha was the son of the second son of Vijayabhūpati, whom we have pointed out above to have borne the full name *gajavēttai-kandaruliya* Praudhapratāpa Pratāpa Dēvarāya, is of importance as it conclusively controverts the commonly accepted view, viz that Mallikārjuna and Virūpāksha were the sons of Dēvarāya II, the first son of Vijayabhūpati. In this connection, we may point out that two unpublished stone inscriptions furnish definite information. They come from Kundāni[8] in the Salem District and Conjeeveram[4] in the Chingleput District and state that Mallikārjuna and Virūpāksha were the sons of *Gajavēttai-kandaruliya Praudha-pratāpa-Dēvarāya-Mahārāyi* Here the mention of the epithet Praudhapratāpa makes it certain that the king referred to is the younger son of Vijayabhūpati. Another stone inscription of Virūpāksha,[5] dated in the cyclic year Sārvari, calls him the son of Gajavēttai-Pratāpa-Dēva-rāya It may be noted that while the mother of Virūpāksha was Siddhaladēvī, the mother of Mallikārjuna was Ponnaladēvī, who must have been two different queens of *Praudhapratāpa-Dēvarāya*, the second son of Vijayabhūpati

Our record is dated in Saka 1389, expressed by the word *nav-āshta-guna-bhū*, Sarvajit, Kārttiga month, bright fortnight, Utthāna-dvādasi According to Dewan Bahadur L D. Swamikkannu Pillai's 'Ephemeris,' this date corresponds to Monday, 9th November, A D 1467. It may be noted that the stone inscriptions of this king range in date from Saka 1387,[6] Vyaya to Saka 1407[7] from which it would appear that he ruled for at least ten years But the latter date is very doubtful as the record is damaged

The generals and officers of this king made known to us from inscriptions are Vittharasa, Odeya,[8] Sāluva-Tirumalarāya,[9] Sāluva-Narasimha,[10] and Singappa-(or Singana-) Dandanāyaka [11] Of these, Vittharasa-Odeya was in charge of Bārakūru and Mangalore which he was governing from Saka 1387 to 1398 Tirumalarāya was in charge of Trichinopoly and Sāluva-Narasimha developed into a usurper in later years Two stone records of Virūpāksha in particular are

[11] Nos. 29 and 153 of the Madras Epigraphical Collection for 1901,

worth mentioning in this connection, of which the one, dated in Śaka 1390, registers a gift by an agent of Sáluva-Narasimha, and the other, dated in Śaka 1394, records a gift for the merit of the same chief.[1]

The subjoined inscription registers (i) a gift of land situated to the west of the Hagari river within the boundary of the village of Yammegonuru in Muda-nadu, a sub-division of Hastinavati-rahita, to a Brahmana resident of Nittura, the son of Sárangirya, learned in the Vedas, Sānkhya and Mimamsā and reputed as the author of a work called *Bhishya-Bhushā*, (ii) gift of lands under the tanks called Krishna-taṭīka, Kariyakere and in the village of Chitukanahalu to another Brahman named Virupiksharya, a physician and the son of Rasesvara, and (iii) gift of the village of Somalapuram, with its name changed into Virupiksharpuram, to a certain Viranarya, who, in turn, appears to have distributed it among Brahmans, dividing it into 60 *vrittis* The distribution of the full 60 *vrittis* among Brahmans is not given But it is said that four Brahmans and three others connected with the issue of the copper-plate grant received 8½ shares The account for the rest is omitted, but it is evident from the blank space preceding verse 46 that possibly one or more plates containing the names of the rest of the *vritti* holders, which were intended to be inserted, have not been so done The description of the boundary marks too, which must have followed this verse, is omitted, as already remarked

Of the geographical names found in this inscription, Nittura, Chitukanahalu, and Somalapura are villages situated in the Bellary taluka, Hastinavati is another name for Anegondi near Hampi, Yammegonuru is in the Bellary taluka at the place where it borders on Hospet, and the river Hagari bears the same name even now. It is noteworthy that the old name Somalapura is retained at present while its later name Virupiksharpuram given in Śaka 1389 has not survived *Khāri*, according to the dictionaries, is equal to 3 bushels and perhaps indicates the extent of land by its sowing capacity The two tanks, Krishna-tatāka and Kariyakere, must be looked for also in the Bellary taluka

The composer of the grant was Durga-Bhaṭṭa, son of Mādhavārādhya, who figures also in Ml 121, and the engraver was the goldsmith Viranarya, son of Muddanārya[2] This engraver is perhaps identical with Viranarya, the father of Mallana, who incised the inscription Ml 121.

[The following metres are employed vv 1-3, 5, 7, 11, 14, 15, 17, 20-53, *Anushtubh*, vv 4, 10, *Śārdūlavikrīḍita*, vv 8, 12, 13, 16, 19, *Upajāti*, vv 6 and 18, *Upendravajrā*, v 9, *Mālinī*, and v 54, *Śālinī*.]

TRANSLATION

(Line 1) Obeisance to Gaṇādhipati

(V. 1) Invocation to Śiva [by the common verse *namas=tunga*, etc.].

(V. 2) May the merciful elephant-faced (god), in the course of whose water-sport the oceans become (mere) ponds, protect the worlds

(V. 3) Salutation to that boar, at the tip of whose stalk-like snout, the earth, comprising the seven islands, seemed (*to possess the beauty of*) a lovely lotus

(V. 4) There is the Lord of stars (i.e. Moon), the younger brother of her who resides in the lotus (i.e. Lakshmī), who shines in the region of the firmament with his (lustrous) ray and constantly illuminates the quarters, who is born of the milk-ocean and is renowned as the depository of *kalas* (digits), himself being made of nectar rays and who has obtained the position of a jewel in the head of Śambhu, the consort of Bhavānī (i.e. Pārvatī)

(V. 5) In his family was born the king named Yadu, and this world was protected by Vāsudēva who was born in that family

(V. 6) There was king Sangama of good conduct, wearing Śaśimauli (Śiva) as an ornamental jewel, on whose victory in battles, the crowds of enemy kings heavily burdened (with numbers) though vanquished reach the cardinal points in great haste, (but) whose (i.e, the King's) fame moves further on (passing) through intervening spaces amidst lords of the (eight) directions

---

¹ Cancel the *visarga* after ग

² The rest of this line and the next line up to बह्मि· are written on an erasure

³ Read °र्षेत्र°   ⁴ Read °सेतुर्न्तृपा°   ⁵ In Kannada characters

(Vv 7 and 8) Then came king Bukka, the foremost of the kingly race, in the fire of whose valour the hostile rulers were consumed as moths   In this king of great fame, the goddess of prosperity of the Karnita (kingdom) rested with pleasure   And the goddess of the earth also for the first time realised the (signification of her) names *Vasundhara* and *Sthira* on account of her qualities of bearing wealth and remaining permanent

(V 9.) Like the moon of bright lustre rising from the Udaya-Saila of lofty peak, king Harihara of rising full glory took his birth from king Bukka who wore a splendid crown and filled all the quarters with abundant wealth acquired by taxation as the moon with the exuberent lustre of his rays

(V. 10) What could stand comparison with him the reflection of whose fame is protected by the deities of the quarters, by whom the (stern) Kali age has been turned into one better than the (golden) Krita age, by whom was caused the highway of the school of philosophy which considers Duty (*Karma*) as god (Brahmi) free of all obstacles, and by whom the earth, having for (its) girdle the oceans, was ruled with justice

(V 11.) She, who was called Meladevi because she was a combination of Sri (*i e* Lakshmi) and Parvati and was in every way possessed of auspicious marks, was the consort of this king

(Vv 12 and 13) India, desirous of removing his stains, obtained on earth the form of this (king) and in the name of Devaraya, with Pratapa prefixed to it, ruled the world with his prowess   In the glowing fire of this king's valour, the Turushkas were scorched up and (other) hostile monarchs, with (their) bravery lost, sought self-protection in forests and ant-hills

(V. 14) The son of this husband of Demambika was Vijayabhupati, the destroyer of his enemies, the store-house of learning, of supreme knowledge and a hero

(Vv 15 and 16) To him, through Narayanidevi, was born the king called Pratapa, renowned as Praudhapratapa, who had fame for wealth   He shone on this earth with many virtues, obtained fame by meritorious deeds, got the (kingdom) of Ghanadri-rajya from his (uterine) elder brother and was a Parijata in granting their desired objects to crowds of mendicants.

(V 17) His wife was Siddaladevi, the resort of all good qualities, like Lakshmi to Narayana and Sachi to the enemy of Namuchi (*i e* India)

(V 18) Siva (himself) was born of her under the well-known name of Virupaksha, full of good qualities, a *rajadhiraja*, the head-ornament of kings, a munificent person and the one ocean of mercy

(V. 19) Acquiring the kingdom through his own prowess, attended with all kinds of prosperity, and conquering all his enemies with the point of his sword, he, as the play-ground of heroism, rejoices

(V 20) He who is renowned as *Chhurika-Bhalanetra* (*i e* Siva in wielding the sword) and ripe of wisdom holds the high (sounding) titles, such as *Murarayaraganda, Pararaya-bhayankara* and *Hindurayasuratrana*

(Vv 21 to 29) On the bank of the Tungabhadra river (and) in the presence of (the god) Virupaksha, having obtained his ancestral throne, this king Virupaksha, the foremost (among those) possessing noble virtues, rules the earth, surrounded by pious Brahmanas assembled in his court   In the course of the Saka years determined by the Salivahana-[Era], in the excellent year Sarvajit (corresponding to the year) expressed by *nine, eight, gunas* (three) and *bhu* (one) (*i e* 1389), on the auspicious occasion of *Utthanadvadasi*, in the bright half of the month of Karttika, he, the best of kings, the wise Virupaksha, a *rajadhiraja* (and) *rajaparamesvara*, of great valour, with the intention of making charity, made a grant to a Brahmana resident of Nittura who was the son of Sarangarya, who belonged to the Atreya-[*gotra*], and was a student of the Rik-[*Sakha*], who was well versed in all the *Sastras*, who knew the sixty-four arts

as well as the Sānkhya and the Mīmāmsā (systems of philosophy), who was learned in the Vēdas and the six *aṅgas* (branches) with their meaning, and who was the author of the *Bhāshya-Bhūshā*, of (one) *khān* of land situated to the west of the Hagari (river), within the boundary of (the village of) Yammegēnūru in Mūda-nāda and in (the sub-division of) Hastināvatī-valita.

(Vv 30 to 32) Again he gave to the scholar and physician Virūpāksharya, son of Rasē-śvara of the Bhāradvāja-[*gōtra*] and a student of the Rik-*Śākhā*, 7 *khān* of valuable land yielding grain and fruit under the tank called Krishna, 3 *khāri* of land under (the tank) known as Kariyakēre and of 3 *khān* of land in (the village) called Chitukanāhālu—thus in all, the number of 13 *khāris*.

(Vv 33 to 39) Having petitioned thus to king Virūpāksha "Oh! King Virūpāksha! grant me the village situated there named Sōmalāpura", Vīranārya obtained from the king the (said) village. On hearing the request, king Virūpāksha made, in the presence of the god Virūpāksha on the bank of the river Tungabhadrā, a *sarvamānya* gift with gold and water, accompanied by libation of water as laid down by rule, of the fertile village (Sōmalāpuram) with all its royal revenue[1], together with canals and gardens, with its name changed into Virū-pākshapuram,—for being enjoyed as long as the Moon and the Sun endure, or for being given away to Brāhmans,—together with the eight kinds of enjoyment, i.e (the right to own) the *nidhi*, *nikshēpa*, *jala*, *pāshāna*, *akshini*, *āgāmi*, *siddha*, and *sādhya*.

(V 40) The Brahman too, pleased and overpowered with joy, blessed the king with long life.

(V 41) (Here) will be written, in order, the *gōtra*, *śākhā* and the father's name and the names of the Brahmans. The number of *vrittis* (who received shares in the village) is sixty.

(Vv 42 to 45 contain the names of four of these donees.)

Verse	Name of the donee	Father's name	Gōtra	Śākhā	Number of *vrittis* owned
42	Malli-Bhatta	Hemanārya	Śrīvatsa	Rik	1
43	Durgā-Bhatta	Vallam Bhatta	Vāsishtha	Do	1
44	Sārangārya	Hampanārya	Hārīta	Do	1½
45	Bhāvi-Bhatta	Bhāyanārya	Ātrēya	Do	2

(V 46) The boundaries of this Brahman village (*agrahāra*) with their respective marks are written (below) in the language of the country, in the four directions commencing with the east, in order.

(V 47) The wise and learned Vallabha, son of Aitayārya, and the chief of the Secretaries (*Rāyasa*) belonging to the Vāsishtha-[*gōtra*] and the Bahvricha-[*Śākhā*], holds one *vritti* (in this village).

(V 48) The intelligent smith Vīrana of virtuous qualities, (who was) the engraver of this document and the son of the prosperous Muddanāchārya, holds one *vritti* (in this village).

(V 49) The learned and intelligent Durgā-Bhatta of the Ātrēya-[*gōtra*] and the Yajus-[*Śākhī*], the composer of this document and the son of Mādhavārādhya, owns one *vritti* (in this village).

(Vv 50 to 54) [Five of the usual imprecatory verses.]

(Line 54) *Śrī-Virūpāksha*.

No. 15.—THE BRAHMA-SIDDHĀNTA OF BRAHMAGUPTA, A D. 628

MEAN SYSTEM.

BY ROBERT SEWELL (I C S., RETIRED).

(Continued from Vol XVII, p. 187.)

321　The Tables published in my last article (*above*, *Vol. XVII*) enabled the dates of ancient Indian inscriptions and records to be verified according to the requirements of the *Brahma-Siddhānta* with, as basis of calculation, the "true" or apparent motions of sun and moon. This mode of reckoning appears to have been introduced in the 11th century A D　But the *Brahma-Siddhānta* was composed in A D 628 and for at least four centuries after its appearance details for the Calendar were almost certainly based on mean planetary motions, while it is believed that this mean system continued to guide the preparation of *pañchāngas* (almanacs) till a much later date—perhaps for several centuries in some parts of the country

For the correct verification, therefore, of early dates it is necessary for historians to be provided with a set of Tables based on mean planetary motions and the postulates of the *Brahma-Siddhānta* in addition to those based on mean motions and the postulates of the *Ārya-Siddhānta* The latter were provided in a previous article in this volume　The former are presented herewith　They cover a period of 800 years, from K Y 3700 to 4500, or from A D 599 to 1400

The system of work is the same as in all my previous Tables, that is to say, it is the system of Largeteau as adopted by Professor H Jacobi in the *Indian Antiquary*, Vol VIII, and in the *Epigraphia Indica*, Vol. XI　Full examples shewing the method of work, which is very simple, are given in my former articles, others, specially concerning the system of mean reckoning on *Brahma-Siddhānta* principles, are given below

In case of doubt as to which of the Tables already published should be used in the present case attention is directed to the accompanying § 329

322　In examining the dates of records in earlier years it is necessary to remember that the modes of reckoning adopted were not always the same as those used in more recent years. As to eras, reference to articles 6-12 of my former work, *Indian Chronography*, is recommended　For other matters the late Dr J F Fleet's remarks in the *Journal of the Royal Asiatic Society* for 1912, pp 704-5, will be found very valuable.

Especially let it be borne in mind that the lunar month reckoning in early years was probably carried out on the *pūrnimānta* system　According to the late Professor Kielhorn the earliest known date certainly in *amānta* reckoning belonged to the year A D 794　It is contained in the Paiṭhān plates of the Rāshṭrakūta king Gōvinda III (*Epig Ind.*, III, 105, *Ind Ant*, XVII, p 142, No 9). As regards these two systems, the *amānta* and *pūrnimānta* names of lunar months, see *Indian Calendar*, §§ 13, 45 (with Table on p. 26), 47 51 and the late Sankara Balkrishna Dikshit's footnote on p 31, also *Indian Chronography*, §§ 75, 76, p. 31.

Elements of the Brahma-Siddhānta mean reckoning.

323. The principal elements are fully stated in my former article on this authority (*above*, Vol. XVII, § 313)　For calculation on the mean system the following notes are necessary.

(i) The length of the mean sidereal solar year is 365^d 6^h 12^m 9^s, a fixture afterwards adopted by Bhāskarāchārya in his *Siddhānta-Śiromani*, A D 1150.

2 ş

(ii) The advance of a (distance of mean moon from mean sun)—which finally fixes the index of the *tithi* ($\frac{1}{30}$th of a mean lunation) in measurement by 10,000ths of circle—in every civil day of 24 hours and in hours, minutes and seconds, has already been given for the *Siddhānta-Śirōmani* in Tables LIV, A and B (*above*, Vol XV) These Tables are applicable to the *Brahma-Siddhānta*

(iii) For the sun's mean motion per day, hour, minute, etc, see Tables XLIII and XLIV (*above* Vol XIV)

(iv) The advance of a in one mean solar month is, in 10,000ths of circle, 307 349156595

(v) Each solar month consists of $30^d 10^h 31^m 0^s 75$ Table XCI below shews the interval of days, hours, etc, between the moment of mean Mēsha-*saṁkrānti*, when the mean sun is at celestial long 0° (*Table XC, cols 13-17*), and the moment of each subsequent *saṁkrānti* when the mean sun enters each of the twelve signs, and so enables the day and time when each mean solar month begins to be ascertained. The same Table gives the advance of a from its value at the moment of mean Mēsha-*saṁkrānti* to the same at each subsequent *saṁkrānti*

(vi) The interval between the moments of true and mean Mēsha-*saṁkrānti*, i e between the moments of the astronomical beginning respectively of the true and mean solar year, which interval we call the *sōdhya*, varies slightly year by year in consequence of the postulated shift of the sun's apsis (§ 313, VII, *above*) The exact intervals, century by century from KY 3700 to 4500, were given above in § 315 The Table is here repeated and extended so as to embrace the whole period of the general Table XC below The quantities were computed by Dr Robert Schram

TABLE B

(*above*, p 126)

VALUE OF *sōdhya* BY THE *Brahma-Siddhānta*

Kaliyuga	A D.	Sōdhya at beginning of centuries.				Days and decimals
		D	H	M	S	
3700	599-600	2	4	8	59 8128	2 1729145
3800	699-700	2	4	9	2 0160	2 1729400
3900	799-800	2	4	9	4 2192	2 1729655
4000	899-900	2	4	9	6 4224	2 1729910
4100	999-1000	2	4	9	8 6256	2 1730165
4200	1099-1100	2	4	9	10 8288	2 1730420
4300	1199-1200	2	4	9	13 0320	2 1730675
4400	1299-1300	2	4	9	15 2352	2 1730930
4500	1399-1400	2	4	9	17 4384	2 1731185

The moment of mean Mēsha-samkrānti, or the beginning of the mean solar year

324   The general Table which follows (Table XC, *cols 13-17*) states the moment of beginning of each mean solar year according to the *Brahma-Siddhānta*   The first entry is for the expired year 3700 of the Kaliyuga (A D 599-600), in which year the astronomical beginning is fixed as at $5^h 15^m$ after mean sunrise on Saturday, 21 March, A D 599   It is incumbent on me to prove the correctness of this fixture   Subsequent entries are based on it by the addition to it year by year of $365^d 6^h 12^m 9^s$ Proof may be offered in three ways :—(A) by comparison with the date and time already found for the beginning of the true solar year K Y. 3700, utilizing Dr Schram's determination of the interval between the two occurrences, (B) by comparison with the date and time fixed for the beginning of the same mean solar year according to the *First Arya-Siddhānta*, allowing for the time difference between the two authorities caused by their different estimate as to the length of the mean solar year, viz 21^s, (C) by direct computation from the moment in K Y 0 of mean Mēsha-*samkrānti*, 3,700 years earlier, which, according to the *Brahma-Siddhānta* (§ 313, v, above), was exactly at mean sunrise, or $0^h 0^m 0^s$ Lankā time, on Friday, 18 Febr (B C. 3102)

C

The epoch of the Kaliyuga was $0^h 0^m 0^s$ Lankā time, or exactly at mean sunrise on Friday   The length of the mean solar year being $365^d 6^h 12^m 9^s$, the beginning of the next mean solar year took place $6^h 12^m 9^s$ after mean sunrise, and after the expiration of a century from the epoch the mean solar year began at $20^h 15^m 0^s$ after mean sunrise, so that after 37 centuries had passed the mean solar year K Y 3700 began at $5^h 15^m 0^s$ after mean sunrise.

When this latter calculation is carried out century by century, the figures shew that centuries 6, 12, 19, 25 and 32, five in all, were defective centuries consisting each of 36,525 days, the remainder being common centuries of 36,526 days   Since 36,526 divided by 7 leaves no

---

[1] See Table, § 273, in Article on the *Siddhānta-Śirōmani* (*Vol XV above*), which is equally applicable to the *Brahma-Siddhānta* , or refer to *Indian Chronography*, p 61   The time-difference in 8 000 years is $17^h 30^m$, in 700 years $4^h 5^m$, total $21^h 35^m$.

remainder and 36,525 divided by 7 leaves remainder 6, the results shew that whereas century 0 began on a Friday, century 37 began on a Saturday

Table XC therefore, as regards the moment of mean Mēsha-samkrānti in K Y 3700 expired, A D 599-600, is proved to be correct

*The beginning of the mean luni-solar year, i.e. the civil day on which the
tithi Chaitra sukla 1 expired, and the value of a (mean tithi-index)
at mean sunrise of that day. Amānta system*

325 In § 317 of my article on the *Brahma-Siddhānta* as calculated by the true motions of the sun and moon (*above*, Vol XVII) it will be seen that the value of a at mean sunrise of Sunday, 22 March, A D 599 (K Y 3700) was proved to be, in measurement by 10,000ths of a circle, 6567 108945284. The mean solar century, however, began on the previous day, Saturday, 21 March Deducting one day's value of a, viz 338 631985412, from the above, we find that at mean sunrise of that Saturday the value of a, or the mean moon's distance from mean sun, was 6228 476959872 This was its value at the beginning of the 37th century K Y Hence the first entry in Table XCII below which gives the values at mean sunrise on the day on which each century began The remaining figures in that Table were obtained by the addition to this value of the increase of a in a century [See § 316 of the same article The increase of a in a century of 36,525 days is 997 678896964, and in a common century of 36,526 days is 0 416684507] Centuries 38 and 44 were defective centuries, the rest were common ones For the beginnings of the odd years of centuries Table LXXXVII was used, the value of a there given being added to that for the century

Thus was determined the value of a at mean sunrise of the day on which each mean *solar* year begins (*see Example 1 below*) From this is found the value of a at mean sunrise of the day on which the *luni-solar* year begins

326 The first day of the luni-solar year is, according to the general rule, the civil day on which expired the first *tithi* of the bright half (*sukla*) of the *amānta* lunar month Chaitra, i e the *tithi* which begins at the moment of the first new moon after the Mīna-samkrānti, or at the moment of the new moon when that *amānta* lunar month begins within the limits of which the Mēsha-*samkrānti* occurs Having already established the value of a on the day in any year on which mean Mēsha-*samkrānti* occurred, we have to subtract from that value the increase of a in whole days between the two dates, the day on which the luni-solar year began being the earlier The first 30 days' entries in Table LIVA (*above, Vol. XV*) enable this to be done We select in that Table the a in col 3 the value of which is next lower than the a of mean Mēsha-*samkrānti*, and the Table then shews in col 1 the number of intervening days, and therefrom the European day and month, and, by subtraction, also (col 2), the week-day. Deducting the selected a from the a of mean Mēsha-*samkrānti*, we have the a of mean sunrise of the day, Chaitra *sukla* 1, on which the mean luni-solar year begins

Thus,—mean Mēsha-*samkrānti* of the year K Y 3700, A D 599-600, was shewn in § 325 to have occurred on (0) Saturday, 21 March A.D 599, at mean sunrise on which day the mean moon's *tithi*-index a was 6228 4770 In Table LIVA, amongst the values of a in the first 30 days, it is seen that the next lower value is 6095 3757 6228 4770−6095 3757=133 1013[1]. Col 1 shews that the interval of days was 18, and col 2 shews the week-day 4 Mean Mēsha-*samkrānti* occurred on (0) Saturday 0 (or 7)−4=3 Tuesday It is therefore found that the day Chaitra *sukla* 1, the first civil day of the mean luni-solar year, was (3) Tuesday, 3 March A D 599, and that the value of a at mean sunrise on that day was 133 1013, shewing the currency of the *tithi* sukla 1 This is the entry in Table XC below

It comes to the same thing if the a of Table XCIII below is added to the a of mean Mēsha-*samkrānti*, the Table being prepared for that purpose The a of mean Mēsha-

---

[1] All values of a below 333 3 prove the *tithi* to have been the first of the *amānta* lunar month, i e., the first tithi of the first (*sukla*) fortnight

samkrānti was 6228 4770. We select such a value of *a* in col 3 of that Table as, added to the former, makes a value between 0 and 333 $\frac{3}{3}$, the limits of the *tithi śukla* 1, and note the interval of days, and the week-day resulting by addition of the given week-day (col 2) to the week-day of mean *Mesha-samkrānti* Here the selected value of *a* is 3904 6243, since 6228 4770 + 3904·6243 = 133 1013 The interval of days is 18 (col 1) The week-day corresponding to the day Chaitra *śukla* 1 is (0 + 3 =) 3 The result is the same as obtained by the former process

All the entries in the general Table XC, cols 19-23, can be proved in this way

To find the exact phase of the mean moon, i e the mean *tithi*-index *a*, on any day of any year, or at any particular moment of any day, it is only necessary to add to the value of *a* given in col. 23 of Table XC for the first day of the luni-solar year the amount of increase of *a* during the intervening whole days, hours, etc , given in Tables LIVA and B (*above*, Vol XV)

The pūrnimānta system of lunar months

327 The *amānta* lunar month begins at the moment of new moon, the *pūrnimānta* month at the moment of full moon a fortnight earlier, so that the fortnight (*śukla*) between new moon and full moon bears the same month-name by both systems, while the fortnight (*krishna*) between full moon and new moon bears, in the *pūrnimānta* system, the name of the lunar month next after that which it bears in the *amānta* system The *śukla* fortnight of the first lunar month, for instance, belongs to Chaitra by both systems The following *krishna* fortnight, however, belongs to Chaitra by the *amānta* system, but to Vaisākha by the *pūrnimānta* system

This should always be borne in mind when examining dates of inscriptions, especially in earlier years For references to already published explanations see § 322 above, and for a Table of corresponding fortnights and lunar months see *Indian Calendar*, Table II, Part I

The mean moon's nakshatra

328 The note on this subject already given (§ 308) in dealing with calculation by the *First Arya-Siddhānta mean system* (*above*, Vol. XVI) applies equally to the *Brahma-Siddhānta* mean system It is unnecessary to repeat it

Tables LXXX and LXXXI, fixing the sun's mean longitude for every day of the mean solar year according to the *First Arya-Siddhānta*, may safely be used for general calculation by the *Brahma-Siddhānta*, since the difference between the two authorities in their estimates of the length of the year only amounts to 21 seconds [1] But in any exceptionally close case the exact value, at mean sunrise of any day in the year, of *s*, or the sun's mean longitude, can be found by multiplying the sun's mean motion in one day (Table XLIII, Vol XIV *above*), by the number of days' interval between the day on which mean Mesha-*samkrānti* occurred and the given day. The sun's mean motion in one day by the *Brahma-Siddhānta* is 59^m 8^s 172655, or in 10,000ths of circle 27 377875426

The *Rule for work* is as follows   (i) Find, as above, value of "*a*" at mean sunrise of given day   (ii) Note number of whole days intervening between the day of mean Mesha-*samkrānti* (Table XC *below*, col 18, *figure in brackets*) and the given day Turn to Table LXXX and note the increase of sun's mean long , "*s*", during that interval Deduct from this, by Table LXXXI, the increase of long during the hours and minutes stated in col 17 of Table XC The result is the sun's mean long , *s*, at mean sunrise of given day   (iii) *Add* *s* to *a* This = *n*, the required index of the mean *nakshatra*, or the mean moon's place in the heavens at that moment Table LXVIII above, or Table VIII, *Indian Calendar*, will shew in which *nakshatra* the mean moon stood at the time

---

[1] In measurement by 10,000ths of circle the total difference in 365 days is 0 00665, by which amount the *Brahma-Sidahānta* is the greater

The 19-year intercalation cycle

329 [See *Indian Calendar*, § 50, p 29, and notes in previous articles above on the working of the cycle by different systems] The sequence in the present case works perfectly regularly except in four instances In every case except these, after four successive intercalations of the same lunar month at intervals of 19 years each, the intercalated month gives way to the month next preceding it The exceptions are—a run of five mean intercalary Bhādrapadas between A D 746 and 822, five Āśvinas between 952 and 1009, five Kārttikas between 1120 and 1196, and five Paushas between 1231 and 1307

Working Tables

330 For general guidance the following Tables, as given for work by the *Ārya-Siddhānta* (*above*, Vol XVI), should be used, or the similar Tables published in the *Indian Calendar*

Table LXII, or *Ind Cal*, Table II, Parts I and II, for names of months and *nakshatras*

Table LXIIIA, or *Ind Cal*, Table III, Part I, for collective duration of mean lunar months

Table LXVIII, or *Ind Cal*, Table VIII, for indices of *tithis, karanas, nakshatras* and *yōgas*.

Table LXIX, or *Ind Cal*, Table IX, for the serial number of days of the year and their names and numbers in European reckoning

Table LXX, or *Ind Cal*, Table X, for conversion of the indices of *tithis, nakshatras* and *yōgas* into time

Table LXXI, the European Calendar for 23 centuries [Table XIII, *Indian Calendar*, may also be used, but the former is easier]

Table XCI below gives the collective duration of mean solar months, measured from the moment of mean Mēsha-*samkrānti*, the astronomical beginning of the mean solar year, also the increase of *a*, the mean *tithi*-index, during the interval

Table XCII shews the value of *a* at the beginning of each mean solar century of the Kaliyuga, that is to say, its value at mean sunrise of the day on which each such solar century began

For odd years of such centuries Table LXXXVII (*above*, *Vol XVII*) is to be used in conjunction with Table XCII, addition of the two given values of *a* yielding the value of *a* at mean sunrise of the day on which each mean year of the Kaliyuga solar century began

For increase of *a* in subsequent days, hours, etc, in any K Y year, or any moment of any day Tables LIVA and B (*above*, Vol XV) are to be used

The use of Table XCIII is explained in § 326 above

Table XCIV-A to F enables the units and decimals of units of results obtained from our system of reckoning in measurement by 10,000ths of a circle, to be converted readily into time, if required The same can be converted into space-measurement in degrees, etc, by Table XLVB (*above*, Vol XIV)

EXAMPLES

[N B —Work may always be done in whole numbers, resorting to decimals only in close cases]

Example 1 To find the mean tithi-index, or phase of moon, at mean sunrise of the day on which mean Mēsha-samkrānti occurred in any year

This is a necessary operation for finding the *tithi*-index *a* at the *moment* of mean Mēsha-*samkrānti*, which is obtained by addition of the *a* of subsequent hours, minutes, etc, to the *a*

of mean sunrise   [The intercalation of lunar months is decided by the value of *a* at the moment of mean Mōsha-*samkrānti*] Two cases are considered, A and B

A Take the year Kaliyuga 3851 expired This was the Śaka year 672 expired It began (Table XC, *cols 13-17*) astronomically at 5^h 49^m 39^s after mean sunrise on Sunday, 22 March A D 750 We want to know the moon's phase, as shewn by the *tithi*-index *a*, at mean sunrise of that day ["*w -d* "=week-day]

		u d	*a*
(*Table XCII*) At beginning of K Y Century 38, mean sunrise	(0)	5100 3761
(*Table LXXXVII*) At beginning of K Y year 51, do	(1)	8036 6243
At mean sunrise on the Sunday in question . . .	(1)	3137 0004

B The year K Y 3849, Śaka 670 both expired This began (*Table XC*) at 17^h 25^m 21^s after mean sunrise on Thursday, 21 March A D 748 The first result shews the *a* for mean sunrise on Friday, 22 March, and the *a* for one day has to be deducted This is due to the fact that Table LXXXVII has to serve for all K Y centuries, common or defective The correction required is never more than that for one day

		u d	*a*
(*Table XCII*) At beginning of K Y Century 38, mean sunrise	(0)	5100 3761
(*Table LXXXVII*) At beginning of K Y year 49, do	(6)	835 2749
At mean sunrise on Friday, 22 Mar	(6)	5935 6510
Deduct one day's value of *a* . . . .—	(1)	—338 6320
At mean sunrise on Thursday, 21 Mar . . .	(5)	5597 0190

Example 2   To find the civil day corresponding to Chaitra śukla 1, or the first civil day of the luni-solar year , and the value of a *(place of mean moon) at mean sunrise thereon*

The civil day corresponding to mean Chaitra *śukla* 1 is that on which the mean *tithi* " *śukla* 1 " expired The *tithi*-index (*a*=) 333 3 marks the last instant of the first *śukla tithi*, so that we have to find a day on which at mean sunrise the *tithi*-index *a* was between 0 and 333 3 The *amānta* lunar month called " Chaitra " begins with the first new moon after the Mina-*samkrānti*, and the civil day called " Chaitra *śukla* 1 " is necessarily earlier than the day on which mean Mōsha-*samkrānti* occurred We have to find the number of days' interval between those two days There are two ways of ascertaining these points, one by using Table XCIII and adding its figures, one by using Table LIVA and subtracting its figures

(1) Take the year in Example 1, A, above The value of *a* at mean sunrise of Sunday, 22 March A D 750, was found to be 3137 0004 We turn to Table XCIII and select in col 3 such a value of *a* as, added to 3137 0004, will result in a total value of *a* between 0 and 333 3 This is found to be 6952 3121, the sum of the two (always disregarding quantities over 10,000) being 89 3125 The interval of whole days from mean Mēsha-*samkrānti* day was 9 (col 1) Adding the number of the week-day (col 2), viz 5, to the week-day of mean Mēsha-*samkrānti*, viz 1 Sunday, we have the week-day 6 Friday Mean Mēsha-*samkrānti* occurred on Sunday, 22 March , and, therefore, it has been determined that the day Chaitra *śukla* 1, the first day of the luni-solar year, was Friday, 13 March A D 750, on which day, *a* being 89 3125, Chaitra *śukla* 1 was the current *tithi* at mean sunrise

Similarly in Example 1, B At mean sunrise of (5) Thursday, 21 March A D 748, *a* was 5597 0190 Add (Table XCIII, *col 3*) 4681 8882 Result 178 9072. The interval of days was

(*col 1*) 16 The week-day number was 5 The week-day of 21 March was 5 (Thursday) Hence the week-day 16 days earlier was 5+5=3 Tuesday So the beginning of the mean luni-solar year was on Tuesday, 5 March A D 748, on which date at mean sunrise the mean *tithi* " *śukla* 1 " was current, the value of *a* at that moment being 178 9072.

The entries in Table XC against these years correspond to these results

(ii) The same results are obtained by using Table LIVA (*above*, Vol XV) and deducting the figures for the interval of whole days between the two occurrences We note that value of *a* in the first 30 days of that Table which is next lower than the value of *a* already found for the day of mean Mesha-*samkrānti*, and deduct the former from the latter The number of intervening days (*col 1*) and the number of week-days (*col 2*) stand against the selected entry This week-day number is deducted, of course, from the week-day of mean Mesha-*samkrānti* Thus—

A For K Y 3851, A D 750

		w-d	a.
(*Example 1, A*) For mean sunrise on Sunday, 22 March A D 750.	(1)		3137·0004
(*Table LIVA*) Next lower value of *a*, and week-day	—(2)		—3047 6879
At mean sunrise of the day Chaitra *śukla* 1 . . .	(6)		89 3125

The interval of days (*col 1*) was nine 6=Friday Hence the day corresponding to Chaitra *śukla* 1 was Friday, 13 March, and at mean sunrise the mean *tithi* Chaitra *śukla* 1 was current, the value of *a* being 89 3125

B For K Y 3849, A D 748

(*Example 1, B*) At mean sunrise on Thursday, 21 March,	(5)		5597 0190
(*Table LIVA*) Next lower value of *a*, and week-day .	—(2)		—5418 1118
At mean sunrise of the day Chaitra *śukla* 1 . . .	(3)		178 9072

The interval of days was 16 3=Tuesday Hence the day corresponding to Chaitra *śukla* 1 was Tuesday, 5 March A D 748, and at mean sunrise the value of *a* was 178 9072

These results are the same as those found by the former process The examples enable any worker to prove the correctness of all my entries in cols 19-23 of the general Table XC below

Example 3 To find if a lunar month was or was not intercalated in the given year

It will be enough, for this problem, to refer to Example 3 (*above*, Vol XVI) of my article on the *Ārya-Siddhānta—mean system* The work here is precisely similar, but for the values of *a* for hours and minutes Table LIVB (*Vol XV above*) should be used, and Table XCI for the advance of *a* during the mean solar months, etc

Example 4 To find the mean *tithi-index* a, shewing phase of moon, at mean sunrise of any day in the year, or at any moment of any day.

Table XC (cols 19-23) gives the civil day corresponding to mean Chaitra *śukla* 1 (the initial day of the mean luni-solar year), its serial number (in brackets) from January 1st of the equivalent A D year, and the mean *tithi*-index *a* at mean sunrise Calculate by Table III, or by Table LXIIIA (*above*, Vol XVI) the interval of whole days from that day to the given day, and, if necessary, the excess of hours, minutes, etc, to the given moment on that day. Add the increment of *a* for the interval of whole days from Table LIVA and for fractions of days from Table LIVB to the *a*, as above, of the initial day, as also the number of days' interval and the corresponding week-day.

E g　Required the *tithi*-index at mean sunrise of the day called "Āshāḍha *śukla* 4" in Saka 547 expired, or A D 625-26, and the corresponding A D day and week-day

In this year there was no intercalated month　The interval from the day "Chaitra *śukla* 1" to the day "Āshādha *sukla* 4" is approximately (Table LXIII-A above, p 335) 93 days. We try this—

	d	w -d	a
Table XC　Chaitra *śukla* 1, mean sunrise	(74)	(6)	184·6506
Table LIVA for 93 days	+(93)	(2)	1492·7746
	(167)	(1)	1677 4252
This value of "*a*" (*Table LXVIII*) shews that the 6th *śukla tithi* was current at mean sunrise　∴ Deduct for 2 days	—(2)	—(2)	—677 2640
At mean sunrise on Āshādha *śukla* 4	(165)	(6)	1000·1612

Table LXVIII or VIII *Indian Calendar*, shews the currency of the 4th *śukla tithi*, at that mean sunrise, since its first point is when *a*=1,000　Day 165 was (*Table IX, Indian Calendar, or LXIX, above*) 14th June A D 625　6=Friday　We learn, however, that the 4th mean *tithi* had begun only about ¼ of a minute before the moment of mean sunrise, so that if the basis of calculation had been the moment of true sunrise (a little earlier than mean sunrise) the corresponding day might have been Thursday, 13 June

Example 5　To find the nakshatra, or place in the heavens of the mean moon, at mean sunrise of any day or of any later moment in the day

Take the case in the last example　It is required to find the value of "*n*" the *nakshatra*-index, at mean sunrise of the day called, in the mean system, "Ashādha *śukla* 4" in the given year, A D 625

The mean *tithi*-index, "*a*", at that mean sunrise was found to be `1000 1612　Since *s+a=n* (§ *327 above*), we have to ascertain the value of "*s*", the sun's mean longitude at that moment

The day, 14 June, was the 165th day after Jan. 1 in that year.　Mean Mēsha-*samkranti* had taken place on (Table XC, *cols. 13-17*) the 79th day at 22ʰ 30ᵐ 54ˢ after mean sunrise.　The day 14 June was (165−79) 86 days later.　We proceed as follows —

		s
Table LXXX, *p 444*　Interval of 86 days		2354 4957
Less (Table LXXXI) for 22ʰ	25·0964	
30ᵐ	0 5704	
54ˢ	0 0171	
	25 6839	−25 6839
At mean sunrise on the day Āshādha *śukla* 4 sun's mean long., "*s*" =		2328 8118
Add "*a*" as already found for that moment		1000 1612
At mean sunrise on that day "*n*" =		3328 9730

This last is the required *nakshatra*-index　Reference to Table VIII, *Indian Calendar*, or Table LXVIII (*above* Vol. XVI) shews that the moon was then in the *nakshatra* Aślēshā by the

2 G

equal-space system of division of the ecliptic, which ended when "n" = 3333 3, but that by the system of Garga or the *Brahma-Siddhānta* (our present authority) she was in Maghā, of which the ending points are respectively 3518 5 and 3477 1 Converted into degrees (Table VIII-B, *Indian Calendar*, or Table XLV-B, *above*) the moon at that mean sunrise stood at about 119°51'

For the value of "n" at any later hour of the given day the index-value for the time since mean sunrise must be added (Table LXXXI) to the "n" of mean sunrise At about 3 hours 50 min. after mean sunrise, for instance, the mean moon entered Maghā by the equal-space system, for the beginning point of that *nakshatra* is 3333 3 The increase of "n" in 3 hours 50 min. is 4 3728, and 3328 9730 + 4 3728 = 3333 3458

Example 6 To find the yōga, "y", at the same moment as in Example 5

The formula for finding the *yōga*-index is either $s + n =$"y", the *yōga*-index, or, in cases where it is not necessary to calculate n (the *nakshatra*), 2 "s" + $a =$ "y" Here, at mean sunrise on 14 June A D 625, we have found "s" = 2328 8118 and "n" = 3328 9730 The *yōga*-index, "y", therefore, = 5657 7848, and reference to Table VIII, *Indian Calendar*, cols 12-13, or Table LXVIII (*above, Vol XVI, cols 6, 8, 9, 10*), shews that the mean moon was at that moment in the *yōga* Siddhi Again 2 s = 4657 6236, and this + "a," which was found to be 1000 1612 = 5657 7848, the same as before.

'

TABLE XC

REMARKS

K Y 3736 expired, A D 635-36   A very close case in the matter of intercalation of lunar month   Mean new moon occurred about 2^m after the moment of the Karka-samkrānti (mean sun at long 90°), and, therefore, at that moment the mean moon was waning, while she was waxing at the next, Simha-samkrānti (mean sun at 120°)   Accordingly the intercalated month was Śrāvana

K Y 3923 expired, A D 822-23   According to the 19-year sequence of intercalations the same month is generally intercalated four times running, i e at intervals of 19 years each Here, however, is an instance of a fifth intercalation of the same month   [See § 329 of text above]

K Y 4110 expired, A D 1009-10   A similar case   Āśvina intercalated for the fifth time

K Y 4297 expired, A D 1196-97   Another   Kārttika intercalated for the fifth time

K Y 4408 expired, A D 1307-08   Another   Pausha intercalated for the fifth time. This was a very close case   The moment of mean new moon was about 1 minute after the mean sun reached the Dhanus-samkrānti (mean sun at long 240°), but she was actually waning at the moment of the samkrānti and was waxing at the next, Makara, samkrānti   Consequently the lunar month Pausha was intercalated

16	(5)	4581 8682	0	(0)	0-0

The use of this Table is explained in Example 2 of this article, and in Example 1 of article on the *First Árya-Siddnānta, mean system* (*above, Vol XVI*).

TABLE XCIV.

Time-equivalents of the tithi (a or t), nakshatra (n), and yoga (y) units.

In very close cases it is sometimes necessary to calculate the exact moment of the beginning and ending of *tithis*, *nakshatras* and *yogas*, with greater accuracy than can be obtained by the use of Table X, *Indian Calendar*, or Table LXX (*above, Vol. XVI, p. 216*), where the time-equivalent of the unit, respectively, is given only in hours and minutes. My general working Tables for several of the Hindu astronomical *Siddhāntas* already published yield results, stated in measurement by 10,000ths of the circle, with an accuracy extending to four places of decimals, and the following Table enables the result to be translated into time down to a fraction of a second. It may be used for all astronomical authorities.

The tithi-index unit.

The *tithi*-unit is $\frac{1}{10,000}$th of a mean lunation. The mean lunation, according to the *Ārya-* and *Sūrya-Siddhāntas*, occupies $29^d 12^h 44^m 2^s 79$. The unit, or 10,000th part of this, is $4^m 2524046$, or $4^m 15^s 144279$.

The nakshatra-index unit.

The moon's *nakshatra*, or her position in the heavens, mean or true, is found by adding the *tithi*-index, a or t, to the index of the sun's longitude, s, mean or true. Both these values are found in the ordinary course of calculation for a date.

The mean *nakshatra*-value $n = 10,000$ is reached in $27^d 7^h 43^m 12^s 3$. In this period the sun's mean motion amounts, in 10,000ths of circle measurement, to 748·0087 (*Table XLIV above (Vol. XIV)*) and the moon's mean distance from mean sun increases (*Table LIV A, B (Vol. XV)*) to 9251·9913. Total 10,000.

$27^d 7^h 43^m 12^s·3 = 39343^m·205$, and this divided by 10,000 fixes the time-equivalent of the *nakshatra*-unit as $3^m·9343205$, or $3^m 56^s·05923$.

The yoga-index unit.

Similarly the *yoga-chakra* is estimated by the *Sūrya-Siddhānta* (*Indian Calendar, p. 62, § 113*) as occupying 36605·116 minutes of time, or $25^d 10^h 5^m 6^s·96$ [1]. The *yoga*-unit therefore is $3^m·6605116$, or $3^m 39^s·6307$.

---

[1] The *yoga* formula is $y = s$ (sun's long.) $+ n$ (moon's *nakshatra*), and, since $n = s + a$, $y = 2s + a$. In the period noted it will be found by calculation, using Table XLIV (*above, Vol. XIV*), that the mean sun s arrives, in 10,000ths of circle measurement, at long. 695·9511, and by using Table LXIV (*Vol. XVI*) that in the same period the mean moon has increased her distance from mean sun (a) by 8608·0964. Twice $s = 1391·9022$, and this $+ 8608·0964$ (the value of a) $= 9999·9988$, practically 10,000 exactly. Table LXIV was prepared according to the *First Ārya-Siddhānta*. Using *Siddhānta-Śirōmani* and *Brahma Siddhānta* estimates (*Table LIV*) the total amounts to 10,000·0015. I have as yet no similar Table according to *Sūrya-Siddhānta* requirements, but from what has been said it may be assumed that its estimate of the time occupied by one *yoga-chakra* ($= 10,000$) is correct.

No 16.—VELVIKUDI GRANT OF NEDUNJADAIYAN. THE THIRD YEAR OF REIGN

By H Krishna Sastri, B.A, Ootacamund.

Sixteen years ago, when Mr Venkayya in his Epigraphical Report for 1908 (pp 50 ff) discussed with great ability the contents of the fourth of the early Pāndya copper-plates discovered till then, he remarked "The originals of these plates have not been traced The following account of them is based on a preliminary study of two excellent impressions belonging probably to Sir Walter Elliot's collections kindly placed at my disposal by Dr Fleet in 1893" These duplicate impressions of the grant now in the editor's possession, are marked by Dr Fleet "I-n-11" and must have been originally intended for publication in the *Indian Antiquary* Mr Venkayya, however, could not at once prepare an article on them, as the early Pandya chronology was then obscure About the end of 1915, Dr L D Barnett of the British Museum, London, sent me impressions of a copper-plate inscription preserved in that institution and wished to know if it had been published and what its contents were Curiously enough, it happened that these were the very same impressions of which Mr Venkayya was unable to trace the originals I wrote back to Dr Barnett informing that the plates contained on them an important Pāndya grant which had been already noticed in the Epigraphical Report for 1908 and asked for certain details about them He says briefly "There is no seal on the grant the plates are held by a thin copper-ring, which has been cut" The detailed measurement of the plates and their number, consequently, remain to be what has been described by Mr Venkayya, viz, these are ten copper-plates, of which the first seven are numbered on the left margin on their inner sides and the impressions measure $10\frac{7}{8}''$ by $3\frac{1}{8}''$, the first and the last plates being written only on their inner sides

The writing on the plates is both in the Grantha and Vatteluttu characters, the first being used in Sanskrit passages (*ll* 1 to 30 and *ll* 142 to 150) and in all Sanskrit words that occur in the Tamil portion of the inscription The Grantha characters and orthography do not call for any special remarks except that in almost all conjunct consonants, where they are written one below the other, the upper or the first member of the compound letter is marked by the *virāma*, following evidently the Tamil method of writing The same influence is also observed in the pronunciation and spelling of Sanskrit words, e g, *pārakan* and *purōkan* (*l* 99), *kritāpatānan* (*l* 100) and *kandakanishluran* (*l* 100 f) In one particular case, the purely Tamil word *antanar* (*l* 61) is written partly in Grantha and partly in Tamil The use of *tsha* for *ksha* (*l* 144), *nma* for *tma*, *dma* for *lma* and *ri* for *ri* or *ru*, in compound letters, also shows the same influence Consonants coming after *r* are always doubled except in °मर्ग्ग° in line 14 and °िर्म्म° in line 17 The *upadhmānīya* and *jihvāmūliya* symbols are used throughout in their proper places The *anusvāra* used in -*varggam=yudhi* (*l* 14) and in *samyati* (*l* 28) is worth noticing. It denotes the *anunāsika* forms of *yu* and *ya* and is shaped in the form of a crescent with a dot in it placed over the heads of these letters. In his commentary on Pānini VIII-4-59 Bhattōji-Dikshita remarks that the *anusvāra* in such cases changes itself optionally into the nasal form of *ya*

The Vatteluttu character so called, is an oblique form of Tamil (excepting certain letters) with a few angularities which on careful scrutiny could be easily accounted for The only four letters in the alphabet whose form cannot be explained with reference to Tamil are the vowel letters *i* ($\mathcal{Q}\Upsilon$) (see *irakki°* in line 40), *ai* (ௐ) (see *aimpadinvar* in line 135) and the more frequently occurring *na* ($\mathfrak{z}$ and *po* ௶) In the matter of the Vatteluttu palæography of this inscription it might be noted (1) that the *pulli* is correctly inserted throughout the inscription except in a few cases, e g, *vōli=* (*l* 31), *ettirattum=* (*l* 47 f), *arram* (*ibid*), -*avarku* (*l*. 46) and *vōli°* (*l* 37), (2) that it is unnecessarily inserted over the vocalic *e* and *o* and even

2 s

over the initial vowel letter *o*, as in *mepnum, chchor,* (*l* 34), *korkai, korrap, konda* (*l* 35), *dēy* (*l.* 38), *goli* (*l* 43), *neppun* (*l* 45), *rrennan* (*l* 46), *kkolai, chchoḷiyan* (*l* 50), *olgāda* (*l* 108 f.), *oḍōda* (*l.* 109), *poḥl* (*l.* 65), *pporu* (*l* 63), *poruttāga* (*l* 71), and (3) that it is omitted in a few cases. The shaping of the long *ū*-sign in *rū* (*l* 119), *nū* (*l* 107) and *lū* (*l* 76) and the use of the Tamil *alabedai* (Skt. *pluta*) in *kkoḷiya* in line 97 for the purpose of completing the metrical quantity are worthy of notice. This *alabedai* according to the Tamil grammarians is to be used in (i) selling articles, (ii) calling people at a distance and (iii) in filling up the metrical quantity in a verse. Pāṇini omits (i) and (iii). While in Sanskrit only vowels have *pluta*, in Tamil the consonants (nasals and sibilants) are also thus lengthened.

The orthographical peculiarities such as the insertion of *y* after consonants with the *e*-sign (*ll* 94, 97f.), the substitution of the vowel *i* for *yi* (*ll* 66, 115, 118, 140), the non-observance of euphonic rules in adding the suffixes *um* (*l.* 93), *ul* (*l* 59), *in* (*l.* 93) and *oḍu* (*l* 46 f.), the want of distinction between the long and the short *i* (except in the single instance *nīrōd=atli* in line 117) and between the long and the short *o*, are noteworthy. *Puḥ-ūr* (*l.* 58), °*maiy-iruppai* (*l* 121 f.), *chey-idai* (*l* 122), *mani-imai* (*l* 81), *kkaḥ-araiśan* (*l.* 90), *kurai-uru* and *nirai-uru* (*l* 102) are also cases of the omission of *sandhi*. *Paramēśvarapār-Vēlvikudi* (*l* 110) for °*nāl Vēlvikudi* and *velirpatlu* for *velippatlu* (*ll* 41, 49, 52, 88) are evidently wrong forms, *śekḥun* (*l* 120) for *śeykkun* and *aimpadinvar* (*l* 135) for *aimpadinmar* may be regarded as colloquial usages; similar also may be the use of *kudu* (*l* 125) for *koḍu*. The form *iydu* (*l.* 152) for *idu* through the intermediate form *ihdu* probably gives us the clue for the correct pronunciation of the Tamil *āydam*-sign which is now pronounced as the *jihvāmūlīya* and the *upadhmānīya* forms of the *visarga*. The metre used in the Tamil portion of the inscription is the *Agaval* while in the Sanskrit portion the metres employed are *Vaṁśastha* (vv 1, 12), *Anushtubh* (vv 2, 17, 20 and 23), *Vasantatilakā* (vv. 3, 9 and 19), *Śārdūlavikrīḍita* (vv. 4, 5, 6 and 10), *Mālabhāriṇī*[1] (vv. 7, 8, 15 and 16), *Upēndravajrā* (vv 11, 14), *Drutavilambita* (v 13) and *Āryā* (v 18).

Palæographically, the Grantha characters of the Vēlvikudi grant differ from those of the Madras Museum plates of Jaṭilavarman,[2] although for reasons stated in the sequel, both of these have to be attributed to the period of the same king Neduñjaḍaiyan. The difference is distinctly observed in the formation of the *serif* which in the first case is a plain horizontal line, whereas in the second, it makes a loop with the letter. The bottoms of letters like *ma* and *ba* and the top of the vowel *i* are bent at the base line in the Vēlvikudi grant, whereas in the Madras Museum plates they either form one uniform curve, or are straight, the *upadhmānīya* and the *jihvāmūlīya* signs are not used at all in the Madras Museum plates. The punctuation marks at the end of verses in the Vēlvikudi grant are the *pillaiyār śuḥ* (૨) whereas in the Madras Museum plates they are denoted by the so-called *ōm* symbol (૭)[3], *anusvāras* are more frequent in the Madras Museum plates than nasal conjuncts. The Vēlvikudi grant, in numbering the plates, uses the Grantha letter-symbols, whereas the Madras Museum plates use the usual Tamil numerals. In the Vaṭṭeluttu alphabet employed, however, the two grants do not seem to differ much, except in the case of the letter *ya* which in the Vēlvikudi grant as in the Āṇaimalai inscription,[4] is uniseptate, while in the Madras Museum plates it is bipartite. This single difference in the characters of the Tamil portion which is the earlier, and perhaps constitutes the grant proper in both, need not show that the two grants must belong to different periods. The

---

[1] The scheme of this verse as given in the *Chhandōmañjarī* is —
विषमे ससजा यदा गुरु चेत् समरा वेन तु मालभारिणीयम् ॥

[2] *Ind. Ant.*, Vol. XXII, with Plate, pp. 57 ff.

[3] The latest interpretation of this symbol is *siddhiḥ,* 'success.'

[4] Above, Vol. VIII, p. 317 ff.

insertion of the Grantha portion in the Vēḷvikuḍi grant might have been somewhat earlier than that in the Madras Museum plates.

The Sanskrit portion of the record commences with an invocation to Śiva (verse 1) and goes on to refer in general terms to the Pāṇḍya kings and their race, of which the family priest was the sage Agastya[1] (vv. 2 and 3) At the end of the previous *Kalpa*, it is stated, there was a powerful king named Pāṇḍya who was ruling at the entrance into the sea (*i e*, on the coast of a gulf) and that the very sa no king at the beginning of the current *Kalpa* was born as Budha, the son of the Moon (v. 4) His son was Purūravas, and in his family, whose crest was a pair of fish, which shared with Indra, the lord of gods, half of his throne and his necklace and was a party in the purāṇic churning of the milk ocean, was born king Māṟavarmaṉ, a patron of the learned (vv 6 and 8) His son was Raṇadhīra (v 9) and his son Māṟavarmaṉ II Rājasiṁha (vv 10 and 11) at whose presence the king P llavamalla ran away from the battle-field (v. 12). This king Rājasiṁha married a Malava princess and by her begot king Jaṭila (v. 14), who was also called Parāntaka (v. 17) Thus ends the short Sanskrit eulogy (*praśasti*) which was composed by the *Sarvakratuyājin* Varōdaya-Bhaṭṭa (l 30).

We may now pass on to what the bigger and the more important part of the record, the Tamil *praśasti*, has to say, with the remark that the Sanskrit portion, by its brief notice and the very meagre historical material which it supplies in the form of a general introduction, could not have been contemporaneous with the Tamil portion It was evidently added only later to give a dignified appearance to the grant proper which is in Tamil This Tamil portion begins with the mention of a past event, namely, that the *kēḷvi*-Brahmans[2] of Pāgaṉūr-Kūṟṟam seeing that one of their own community, named Naṟkoṟṟaṉ, the headman of Koṟkai, who had contemplated the performance of a Vēdic sacrifice, with the help of the ruling Pāṇḍya king (*ādhirāja*) Palyāgamudukuḍumi Peruvaḻudi, placed his petition before the king and themselves standing in front of the sacrificial hall, blessed that spot to be thenceforth (?) called Vēḷvikuḍi[3] The king granted the village to Naṟkoṟṟaṉ and it was thus that the village came to be enjoyed by the latter for a long time After this, a powerful Kali king, named Kaḷabhraṉ, conquering many *ādhirājas*, brought under subjection the whole Pāṇḍya country including, of course, the village Vēḷvikuḍi which was then resumed. Some time elapsed and after this sprang forth a powerful Pāṇḍya, named Kaḍuṅgōṉ, who reconquered the whole land from his enemies. His son was Avanichūḷāmaṇi Māṟavarmaṉ. His son was Śeḻiyaṉ Vāṉavaṉ Śēndan and his son, Arikēsari Asamasamaṉ Māṟavarman, who won a battle at Pāḻi against his enemies, defeated a certain Vilvēli at Nelvēli; destroyed the Paravas and the people of Kuṟu-nāḍu; won a victory at Śeṇṇilam, conquered the Kēraḷa several times at the strongly fortified town of Puliyūr; made many gifts and protected the Brāhmaṇas and the invalids His son was Śaḍaiyaṉ, the lord of the Koṅga country (Koṅgarkōmāṉ), who was possessed of the titles Teṉṉa-Vāṉavaṉ, Śembiyaṉ, Śōḻaṉ and Madura-Karuṇāṭakaṉ,[4] won a battle at Maruḍūr,

---

[1] Agastya is also supposed to have been the founder of the Tamil language and the author of the Tamil grammar *Agattiyam* mentioned in Tamil literature He is referred to as the family priest of the Pāṇḍyas also in Kālidāsa's *Raghuvaṁśa*, VI. 61, and in the commentary on *Iṟaiyaṉār Agapporuḷ.*

[2] *Kēḷvi-andaṇālar* may also mean 'learned Brāhmaṇas'. But *kēḷvi* seems to be used here in a technical sense. In inscriptions we find the word applied to a class of administrative officers whose business was to carry the applications of petitioners to the 'hearing' of the king See also *Ep. Ind*, Vol. III, p. 69, foot-note 7.

[3] *I.e*, the village of the sacrifice In the Tamil portion in l 108 f. it is stated that the village had the name Vēḷvikuḍi given to it by king Mudukuḍumi

[4] The significance of this title is not apparent. Could it be that like Śembiyaṉ and Śōḻaṉ he could have acquired it by conquering the Western Chālukyas who were known as Karnāṭakas? But we know that these were too far away from the reach of the Pāṇḍyas Another possible explanation is that the Pāṇḍyas might have intermarried with the Chālukyas and the issue of such an intermarriage might well be called 'the Sweet Karnāṭaka'! Again, the identification of the Kaḷabhra with Karnāṭa by Mr. Venkayya (see below p. 295) seems to gain in significance in considering the propriety of the title Madura-Karunāṭakaṉ held by king Śaḍaiyaṉ.

defeated Āyavēl in battles at Śengodi and Pudānkōdu, destroyed the Mahārathas at the big
town (*Mahānagara*) of Mangalapuram and stamped the symbols of the bow, the tiger and
the fish on the big mountain, *viz*, the Himalayas This shows his supreme authority over
the Chēra, Chōla and Pāndya countries, whose symbols were the bow, the tiger and the fish,
respectively His son was Tēr-Māran who routed his enemies at Neduvayal, Kurumadai,
Manni-Kurichchi, Tirumangai, Pūvalūr and Kodumbālūr, defeated the Pallava[1] king and
captured his elephants and horses in the battle of Kulumbūr, crushed his enemies at Periyalūr
crossed the Kāviri (*i e*, the river Kāvērī), subdued (the country of) Mala-Kongam, reached
Pāndi-kKodumidi, worshipped Pasupati (*i e*, Śiva), contracted marriage relations with
Gangarāja[2] and renewed the fortifications of Kūdal, Vañji and Kōli His son was Parāntaka
Nedunjadaiyan, who drove the Kādava (*i e*, the Pallava) into the forest, after defeating him
in the battle of Pennāgadam on the southern bank of the river Kāviri and won a battle at
Nāttukkurumbu driving away the Āyavēl and the Kurumbas to the forest This king
possessed a long list of *birudas* such as Śrīvaran, Śina-chChōlan, Puna-pPūliyan, etc,
enumerated in *ll* 98 ff

In the third year of the reign of this last mentioned king, a man having arrived at Kūdal
with a loud complaint, the king himself enquired into the matter with kind words and hearing
from him how his village Vēlvikudi in Pāganūr-kūrram, originally granted under that name
by his ancestor, the great king (*Paramēśvaran*) Palyāgamudukudumi Peruvaludi, was resumed
by the Kalabhra and had since then remained so even after the resumption of Government by
tne Pāndyas, he ordered the applicant to produce the necessary evidence before the *nādu* to prove
that the village was his from early times and thus to get it back The complainant proved
his claim accordingly and the king renewed the grant to the applicant Kāmakkāni Narchingan,
the headman of Korkai The *ānatti* of the grant was Madavikalan Mārangāri *alias*
Mūvēndamangala-Pperaraiyan, the crest-jewel of the Vaidyakas and a native of Karavandi-
pura, and a favourite of the king of kings (*i e*, the Pāndya king Nedunjadaiyan). It is stated
of this Mārangāri that he fought bravely in the fight that ensued between the kings of the
Eastern country (*Pūrva-rājar*) and Vallabha on the occasion when the daughter of Gangarāja
(the Ganga king) was procured for Kongar-kōn

Ll 134 to 141 repeat that the owner of this *brahmadēya* (*viz*, Vēlvikudi) was Kāmakkāni
Suvaran-Singan, the headman of Korkai, by which perhaps the Narchingan, just mentioned,
must be referred to The composer of the Tamil *prasasti* was the *Sēnāpati* Ēnādi *alias* Sāttan
Sāttan. This brings us to the end of the Tamil portion. The next Sanskrit verse speaking
of the *ājñapti* of the grant says that he was Mangalarāja Madhuratara, a Vaidyaka and a
master of the *Sāstras*, a poet and an orator Then follow four imprecatory verses which are
expressly stated to be quoted from the Vaishnava-Dharma. A Tamil prose passage coming
after this says that the king himself ordered the engraving of this copper-plate grant and that
the engraver was a certain Yuddhakēsari Perumbanaikkāran.

In noticing these plates in his *Annual Report on Epigraphy* for 1908, pp 50 ff, Mr Venkayya
has already made it clear how *Kalpa-kshayāt* in v 4 has to be understood with reference to the
traditional account of the deluge[3] or tidal wave in the Pāndya country and to the survival of a
king of the old Pāndya line " of the race of the Moon and in all respects corresponding," under
the name Budha Similarly also, the mythical boast of the Pāndya kings to have engraved their
crest on the top of the Himalayas and to have shared one-half of Indra's throne and worn the
garland of the king of the gods, has been shown to occur frequently in the later Pāndya inscrip-
tions Palyāgamudukudumi-Peruvaludi is a historically famous Pāndya king in whose honour

---

[1] The name of this Pallava king, which begins with *Se*, is hopelessly damaged on the impression
[2] Evidently the same mentioned in connection with the next king, his son Nedunjadaiyan.
[3] Old Madura is supposed to have been washed away by the sea see commentary on *Agapporul*, p 4.

five poems are known to have been sung by three famous Sangam[1] poets and included in the Tamil anthology called *Puranānūru*. In one of these he is stated to have captured the extensive forts of his enemies and to have destroyed and ploughed their streets with a team of white-mouthed asses This way of dealing with the conquered countries seems to be a very old one. Dr. S. Konow points out that there is a reference to it in the Hathigumpha inscription of Khāravēla[2] It is mentioned also in some inscriptions of the later Pāṇḍya king Māṟavarman Sundara-Pāṇḍya I The Kalabhra occupation of the Madura country and the consequent interregnum are also noted by Mr Venkayya with the remark that the Kalabhra may be the Karnāṭa. After the interregnum came Kaḍuṅgōṇ with whom the first academy (Saṅgam) of Tamil poets is supposed to have come to an end The list of the kings that followed Kaḍuṅgōṇ to the donor Neḍuñjadaiyan is given in a genealogical table on p 54 of the *Annual Report on Epigraphy* for 1908, together with further information supplied about them by two other sets of Pāṇḍya copper-plates[3] secured from Siṇṇamaṇūr Mr. Venkayya thinks that Neḍuñjadaiyan of the Vēlvikuḍi grant must be different from Neḍuñjadaiyan of the Madras Museum plates published by him in the Indian Antiquary, not only on the strength of certain palæographical differences already noted above but also on account of the different engravers who in the one case was Yuddhakēsari Pāṇḍya-Ppeṛumbaṇaikkūran and in the other, Pāṇḍi-Pperumbaṇaikkāran alias Arikēsari He further identifies Neḍuñjadaiyan of the Vēlvikuḍi plates with Māṟañjadaiyan of the Ānaimalai cave inscription, for, between these two there is not only palæographical similarity, but also it happens that the *ajñapti* of the former is the prime minister mentioned in the latter, both being called Mārangāri Mūvēndamangalappēraraiyan, members of the Vaidya (or Vaidyaka) family and natives of Karavandapura with the attributes *Maduratara* and *Kavi* Consequently, the two kings Neḍuñjadaiyan and Māṟañjadaiyan, who both bore the same surname Parāntaka, must be identical and the date of the Vēlvikuḍi grant must be about A D. 769-70 which is the date of the Ānaimalai inscription.

About the military achievements of Neḍuñjadaiyan we learn from this inscription that he defeated the Kādava king at Pennāgaḍam on the southern bank of the Kāvēri river and grove the Āyavēl and the Kuṟumbas in a battle fought at Nāṭṭukkuṟumbu Again, a statement made about the *ajñapti* of the grant in lines 126-129, adds that Mārangāri rendered valuable service to his master Neḍuñjadaiyan by defeating a certain Vallabha at Veṇbai, on the occasion when the eastern kings secured the hand of the Gaṅga princess in marriage for Kongarkōn. Here Kongarkōn in order to suit the context, must be taken to be a surname of the Pāṇḍya king Neḍuñjadaiyan himself. This is not improbable, inasmuch as his grandfather Śadaiyan is also called in the inscription (Text, l. 70), Kongarkōmān, and his father Tēr-māṟan is stated to have contracted relationship with the Gaṅga king (Text, l. 84) This latter event perhaps refers to the occasion when Mārangāri achieved the success mentioned above.

In spite of what Mr. Venkayya thinks about the identity of the kings mentioned in the Vēlvikuḍi plates and the Madras Museum plates there are strong reasons to believe that both refer to the same king. For, the ruling king Parāntaka Neḍuñjadaiyan and his *birudas* Paṇḍi-tavatsala, Vīrapurōga and Vikramapāraga occur in both Further, the surname Śrīvaramangala given to the granted village Vēlanguḍi in the Madras Museum plates makes it clear that the king must have also had the *biruda* 'Śrīvara' which we find actually given to him in the Vēlvikuḍi plates[4] The special mention of Mūrti Eyinan in l 136 of the Vēlvikuḍi plates as

---

[1] According to tradition there were three *Sangams* or old academi s of Tamil Poets The date of the last of these has been widely discussed The latest pronouncement on the subject is that it must have come into existence some time after the 5th Century A. D

[2] *Acta Orientalia*, Vol 1, Part I, p. 23f.

[3] These plates are under publication by me in the *Epigraphia Indica*.

[4] Mr K V Subrahmanya Ayyar also supposes it to be so, *vide* his *Sketches of Ancient Dekhan*, pp 103 ff.

one of the fifty Brāhmaṇa sub-donees marks him out as an important personage. From the Ānaimalai inscriptions, we know that Eyinan was an epithet or surname held by Māraṇ Eyinan, the younger brother of Mārangāri himself. Perhaps Māran Eyinan and Mūrti Eyinan were both younger brothers of Mārangāri The *ājñapti* of the Madras Museum plates was Dhirataran Mūrti Eyinan, who was one of the *mahā sāmantas* of the king. There is little doubt that Mūrti Eyinan of our plates and Dhirataran Mūrti Eyinan of the Madras Museum plates are identical and that thus also the king Neduñjadaiyan mentioned in both these sets of plates is one and the same If this identification is accepted the two allied plates together supply the full list of the military exploits of Neduñjadaiyan By the third year of his reign (the date of the present grant) Neduñjadaiyan must have subdued the Āyavēl and the Kurumbar and defeated the Pallavas south of the Kāviri; but before his 17th year (the date of the Madras Museum plates) he had carried his conquests right into the heart of the Kongu country and taken possession of it by defeating its king Adiyan and his allies the Pallavas and the Kēralas The conquest of the Kongu country and the desire to possess it seem to have been very strong with the Pāndya kings For, Sadaiyan, the grandfather of Neduñjadaiyan, held the title 'Lord of the Kongas' and his father Tēr-Māran actually crossed the Kāviri, subjugated Mala-Kongam and had invaded that country even as far as Pāndi-kKodumudi. Neduñjadaiyan seems only to have followed in the footsteps of his ancestors in subduing the Kongabhūmi, as far as the land of the Gangas The information that a Ganga princess was married into the Pāndya family is not mentioned in any of the Ganga records of this period which falls into the reign of Śivamāra I (755 to 765 A D). The Vallabha or the Western Chalukya king who was defeated on this marriage occasion was probably Kirtivarman II who succeeded to the Chalukya throne in A D 746 or 747 and whose army is stated in his records to have defeated the army of the Kēralas, the Chōlas and the Pāndyas

From what is stated of the countries of Kongu and Kērala in these inscriptions of Neduñjadaiyan, it is not difficult to see that the former was bounded on the east and perhaps also on the north by the land of the Gangas—the Gangavādi 96,000 of the Western Gangas of Talakād and that on the south it extended far beyond Kodumudi, as even to cover the northern portion of the later Rājasarya-Valanādu of the Chōlas which included in it the present Musiri and the Trichinopoly talukas Coimbatore was in the western division of the Kongu-mandalam The king of the Northern (*vada*) Kongu was Adiyan[1]—the Adigaimān or Adiyamān of later inscriptions whose capital was at Dharmapuri, the ancient Tagadūr, in the Salem district The Kērala country was situated on the west coast beyond the Sahyādri mountains and may have included also the southernmost portions of the present Coimbatore district In the 8th century, therefore, it looks as if the Kongu king allied himself with the Pallavas in the north and the Kēralas in the south and tried to oppose the invasion of the Pāndya Neduñjadaiyan The Vallabha was defeated by the Pāndya general and a Ganga princess was married into the Pāndya family perhaps as a political measure It is stated that Pūrvarājar put to flight Vallabha. Mārangāri also fought on the same occasion Perhaps the Pūrvarājar were the chiefs of Gangavādi subordinate to the Western Ganga king who contracted marriage relations with the Pāndyas

Mr. Venkayya observes again in his Epigraphical Report that the title Arikēsari occurring in text-line 62, was borne by a certain Nedu-Māran who is mentioned in the commentary of Nakkirar on *Iraiyanār-Agapporul* This latter work, as tradition says, was made available for the public by Nilakandanār of Musiri eight generations, i e, about two hundred years, after the actual date of Nakkirar Mr Venkayya seems to have gone wrong in identifying Nedu-Māran of literature with Tēr-Māran of the Vēlvikudi plates where, however, the characteristic title Arikēsari is not given to him The other titles, too, are not applied to him and the

battles fought by him as described in the commentary under reference, are not found in the eulogy of Tēr-Māran given in the Velvikudi plates. On the other hand, Maravarman, the great grandfather of the donor Neduñjadaiyan is not only called Arikēsari but is also stated to have fought victorious battle at Pali, Šennilam and Nelvēli which same are mentioned of him in the commentary on the Iṟaṇiyār[1] This mention, therefore, of the very same battles both in the plates and in the commentary, sufficiently warrants our identifying Nedumāran of the commentary with Maravarman, the great grandfather of Neduñjadaiyan and not with Tēr-Māran Nal-kinai who sang also of Neduñjelyan in Puṟanīṟṟu, and it is not impossible that this Nedunjelyan is identical with Šelvan, the father of Arikēsari Maravarman

Of the six ancestors of Nedunjadaiyan mentioned in the Tamil portion of the inscription and the three immediate ancestors mentioned in the Sanskrit portion, we learn nothing more than that the first king Kaunrēn who came to rule after the Kalabhra interregnum was a Pāndy-ādhirāja,[2] that the next Maravarman bore the title Avanichūlāmani and that the third Šendan, also called Šelvan and Vānavan, was probably identical, as stated above, with Nedunjelyan of the Puṟanīṟṟu fame. The fourth king, whose military achievements are given in detail, was Šrī-Vīravarman Arikēsari Asamasaman, who in addition to the victorious battles mentioned already destroyed the Paravas and the people of Kuṟu-nādu. The fifth Sadaiyan also called Rāṇadhira, was the lord of the Kongas, fought battles against the Āyavēl at Marudūr and with the Mahārathas at Mangalapura; and the sixth, Tēr-Māran or Rājasimha, defeated Pallavamalla, perhaps at Kulumbūr, and fought battles at Neduvayal, Kuṟumadur, Marandurichchi, Tirumangai, Puvalūr, Kodumbālūr and Periyalūr and subjugated the country of Mala-Kongam as far as Pāndi-kKodumidi. He contracted relationship with Gangarāja, marrying the daughter of the Ganga prince to his son Neduñjadaiyan, himself having married the daughter of the king of the Malavas.[5] The fact that he defeated Pallava-malla shows that Tēr-Māran must have been a contemporary of that king and lived about A D 710-760[4]

As regards the territorial terms and village names that occur in the inscription, Pāganūr-kūṟṟam is identical with the division of that name in which the village Šolavandān near Madura was included[5] Malava is identical with Mala-nādu[6] Kuṟu-nādu, and the granted village Velvikudi, and the villages Nagarūr, Koṟṟanputtūr and Pāyal mentioned in the description of the boundaries of the latter cannot be identified. Korkai is the well-known seaport of that name in the Tinnevelly District. Of the villages Nelvēli, Šennilam, Palliyūr (in Kērala), Marudūr, Mangalapura, Neduvayal, Kuṟumadai, Mappikuṟichchi, Tirumangai, Pūvalūr, Šengudi, Padāngōdu, Kodumbālūr, Kulumbūr, Periyalūr, Pāndikkodumidi, Kūdal Vañji, Koli, Pennāgadam, Nāttukkuṟumbu, Karavandapuram and Venbai,—Nelvēli is Tinnevelly;

---

[1] Ibid., pp 129 ff

[2] Describing the several grades of rulers, the Kāmikāgama states that an adhirāja—ādhirāja is the form which the inscription uses throughout the Tamil portion—holds the second rank among kings —

चतुस्समुद्रपर्यंतं पृथिवीं य प्रपालयेत् ।
चक्रवर्ती समाख्यातः समराज्य प्रपालयेत् ॥
अधिराजश्चसमाख्यात.

(Hindu Iconography, Vol I, Part I, p 29 n)

[3] Malava is identical with the old Mala nādu or Rājāsraya Valanādu (see S. I I, Vol II, Introduction, p. 24, and Historical Sketches of Ancient Dekhan, p 129)

[4] Udayachandra, the general of Nandivarman Pallavamalla, also claims in the Udayēndiram grant to have defeated the Pāndya at Mannaikkudi (S I I, Vol II, p 368, Text, l. 60 f) Perhaps we may have to identify Mannaikkudi with Mappikuṟichchi which is mentioned in the Tamil portion (Text, l. 73 f) as one of the places where Tēr-Māran was victorious

[5] No 127 of the Madras Epigraphical Collection for 1910.

[6] See above note 3.

Marudūr is perhaps Tiruppudaimarudūr near Ambāsamudram, Mangalapuram of the Mahārathas might be Mangalore; Kodumbālūr is in the Pudukkōttai State, Pāndikkodumidi is the village Kodumudi near Karūr a station on the South-Indian Railway, Kūdal is Madura; Vañji is Karūr[1], Kōli is Woraiyūr near Trichinopoly, Pennāgadam is in the Tanjore District, and Karavandapuram is the modern Kalakkād in the Tinnevelly District.

[1] Pandit Raghava Aiyangar of Ramnad has proved from copious references to literature that the earliest Vañji is Karūr. But an inscription at Dhārāpuram mentions the town Kongu-Vañji, suggesting thus, another Vañji which was perhaps the earlier and the capital of Chēra.

[2] From two excellent impressions supplied by Dr Fleet to Mr. Venkayya in 1898 and another supplied by Dr L D Barnett to me in 1915.

(V. 8). He, the patron of the learned, conquered enemy crowds in battles and ascended the scales ; came out of the nectar womb (*of the cow*); and according to rule, gave away heaps of gold[1].

(V 9) His son was the king called Ranadhira, whose prowess was equal to that of the youthful sun and who bore the burden of the earth as sportively as his ancestors wore the neck-lace of (Indra), the chief of the gods.

(V. 10). His son was the glorious king named **Maravarman**, a counterpart of *Purandara* (Indra) ; the dear lord of the beautiful lady, earth, whose pair of feet was surrounded by the collection of gems in the crowns of all kings bowing in obeisance, whose friend was truth , whose wealth was prowess , the lord of the goddess of prosperity (Padmāsanā), who was an ornament of learning and good conduct and a depository of sacred knowledge

(V 11) That lotus-eyed **Rājasimha**, the king of the whole earth, driving away the fear of created beings on earth, ably protected the earth unopposed (*after*) destroying the allied enemies

(V 12). " Is he Nara (*i e*, Arjuna) , is he a giant , is he Hara (*i e*, Śiva) , is he the Primeval Man (Vishnu) , is he Śakra (Indra) come with anger ?" thus thinking of him, in the battle-field, the frightened king **Pallavamalla** runs away (*from him*)

(V 13). Who being made to be born of the womb of the golden (*cow*) and having again ascended the matchless scales, was freed of (*his*) sins and showered freely (*his*) wealth on Brahmans, beggars and temples

(V 14) Thus (*king*) **Māravarman** suitably married the daughter of the **Maḷava** king of high birth , and from her was born, for the good of the world, (*the king*) named **Jaṭila** almost equal to Skanda the son of Śiva

(V 15). That king of great strength ruled the earth clearing it of (*all*) associations of corruption ; the footstool of his lotus feet was worshipped by the great lustre proceeding from the gems on the crowns of prostrating kings

(V 16) I imagine that he lent (*his*) virtues to the Krita (golden age) , (he lent) to the celestial tree its nature, from his hands ; to the subjects who sought refuge (*in him*), his promise of protection ; and to the enemy kings on the battle-field, heaven [2]

(V 17) May he be long glorious on earth, king **Parāntaka**, the son of **Rājasimha**, whose commands are borne on the crowns by rulers of earth

(L. 30) This *praśasti* was composed by **Varōdayabhaṭṭa** who was a performer of all sacrifices (*Sarvakratuyājin*).

(L 31). **Naṟkoṟṟaṉ**, the headman of **Koṟkai**, who never transgressed the path of the *Śrutis* as interpreted by the highly learned (*men*) of the division called **Pāganūr-kūṟṟam**,— a well-watered land of extensive paddy fields, where the beetles buzzed on cool buds in groves blooming with the Nāga and the mango (*trees*),—being desirous of completing a (Vedic) sacrifice begun (*by him*), through (*the favour of*) the ādhirāja of the Pāndyas called **Palyāgamud-ukuḍumi-Peruvaḷudi**, who dispersed the crowd of the enemy kings by leading numbers of ferocious elephants (*against them*), the **kēḻu-Brāhmaṇas**, in presence (*of the king*) saying

---

[1] These are the gifts which kings are expected to make on their coronation or on obtaining conspicuous victory in battles They were also expiatory in character. See below, v 18

[2] The nature of the celestial tree is to give whatever is wanted and the hands of the king were giving away gifts on a very liberal scale To give enemy kings heaven means to kill them on the battle field and by so doing to send them to heaven.

"Please hear (O king) " explained the petition (of Narkorran), stood in front of the sacrificial hall and blessed that spot to grow in prosperity under the name Vōlvikudi.[1]

(L 38) The king at once gave it with libations of water and it was since long (so) enjoyed

(L 39) Then a Kali[2] king named Kalabhran took possession of the extensive earth driving away numberless great kings (ādhirāja) and resumed the (village mentioned) above

(L 40) After that, like the sun rising from the expansive ocean, the Pāṇdyādhirāja, named Kadungōn, the lord of the South of sharp javelin who wore (the cloak of) dignity and was the leader of an army, sprang forth, occupied (the throne), spreading round him the brilliant splendour of (his) expanding rays (prowess), destroyed the kings of the extensive earth surrounded by the sea together with (their) strongholds and (their) fame, wielded the sceptre (of justice) and removed by his strength the evil destiny of the goddess of Earth whose splendour deserved to be under the shade of (his) white umbrella, by terminating by his strength[3] the possession of her under others and establishing her in his own possession in the approved manner and destroyed the shining cities of kings who would not submit to him.

(L 46) Then came his son Avanichūlāmani Māravarman, who removed the common ownership of the earth (by making it his own), who was wedded to the goddess (born) of the flower (i e, Lakshmi), the leader of a faultless army of fighting spearsmen, and the infuriated elephant who destroyed by all (possible) means the power (of enemy kings)

(L 48) Then came his son, a lovely one and incomparable, the just ruler, Seḷiyan Vānavan, Sēndan, the lord of the hill-chiefs who throw weapons (dexterously), who removed the spot[4] from the goddess of the earth, who became well known by his prowess and who possessed long hands (holding) the bow, and furious elephants

(L 51) Then to him (was) born, a son,[5] Arikēsari, Asamasaman śrī-Māravarman, whose high jewelled crown was adorned with ornamental hangings , who, like the brilliant Sun from the middle of the eastern mountain, came out spreading his rays, causing the quarters to tremble , won the battle at Pāli by driving into the field of battle caparisoned elephants , conquered the ocean-like army of Vilvēli[6] in the battle of Nelvēli ; destroyed the Pararas who did not seek refuge by approaching him , annihilated the race of the people of Kuru-nāḍu where crowds of beetles abounded on all sides , won a victory at the battle of Sennilam by driving into battle (a herd of) elephants of strong trunks , conquered many a time during the day, in the terrible battle-field of Puliyūr of strongly fortified walls, the Kērala (king) whose matchless sway (extended) over the whole earth together with (his) near relations and their elephants and captured them alive[7], marched against, attacked and destroyed unopposed the sea of weapons, and the high mountains (of that country) , performed many times on earth (the gifts called) hiranya-garbha and tulābhāra, and gave (the same) with pleasure to Brāhmans and the infirm inviting them to come and assemble

---

[1] In blessing it, they actually suggested that the king might grant the village to the Brahman Narkorran under the name Vēlvikudi.

[2] Mr K V Lakshmana Rao, M A , has suggested in an article entitled ' The Kopparam Plates of Pulakēśin II, contributed to the Annals of the Bhandarkar Institute, Vol IV, Part I, pp 43 to 54, that Kali-kula occurring therein in text-l 8 is possibly a reference to the Kalabhras He seems to be right , for the phrase Kalabhran=ennun= Kali araisan in l 40 of the Vēlvikudi Plates properly translated means ' a Kali king named Kalabhra '

[3] Tiravidin is interpreted by Pandit R Raghava Aiyengar of Ramnad to mean ' by his strength '

[4] As usual this ' spot ' of the earth is her being in possession of kings other than himself

[5] Dr Winslow gives under vali, the phrase valittonral in the sense of ' a son '

[6] Dr Krishnaswami Aiyyangar holds the view that Vil-vēli means ' a hedge of bows,' but here it must refer to a name

[7] The word -iravamai is explained by Pandit Raghava Aiyengar of Ramnad to mean ' in a moment '

(L 62) Then (came) his son King Śadaiyaṇ, the lord of Kongas, whose javelins were long, brilliant and destructive, who was (also called) Tennan Vāṇavan, Śembiyaṇ, Śōḷaṇ,[1] king of kings, the beautiful Karunātakan, who with the victorious javelin in his right (hand), fought and destroyed the glory of the ocean-like army that came forth at Marudūr and capturing Āyavēl, attacked and destroyed him completely[2], gained victories in battles at Śengodi and Pudāṇkōdu[3] and brought his (i e, Āyavēl's) anger to an end , at the great city called Mangalapura, where the peacock danced with the cuckoo near tanks perfumed with opening flowers, attacked and destroyed the Mahārathas ; removed the word " common property "[4] (with reference to) the country (bordering) on the roaring sea , administered justice tempered with mercy and ruled the earth with love, having reached the slopes of the high and permanent mountain (Mēru) and cut on the broad face of it the bow, the tiger and the fish

(L 71) Then (came) his son Tēr-Māraṇ (i.e, Māraṇ of the horse-chariot) the king of kings, a member of the Pāṇḍya (Tennavar) family, the proud possessor of the white parasol, who in order to acquire the goddess of the earth, carried in his right hand the awe-inspiring javelin and driving (forth) mast elephants (into the battlefield), defeated straightway at Neḍuvayal his opponents, who had rushed in great haste (against him) , suppressed the rage of those whose minds were filled with anger (against him), at Kuṟumaḍai, destroyed the power of (the enemies) who confronted him at Minnikuṟichchi and Tirumangai ; saw the backs of the insubordinate (chiefs) who advanced towards him with an ocean-like army, at Pūvalūr; captured the fiery steeds, the black elephants and the sharp missiles of enemies at Kodumbālūr which had high ramparts and deep trenches (round it) , deprived the splendour of the Pallava (king)
. .   . at Kulumbūr and took numberless huge elephants and horses , humbled at Periyalūr the greatness of those who had come to cut him asunder not bearing (to see his greatness) , crossed the Kāviri (with its) groves (of trees) and tanks of budding flowers ; subjugated Maḷa-Kongam with (the help of his) beautiful long bow ; proceeded and reached Pāṇḍikkodumidi of high fortifications, beautiful with the lustre emanating from brilliant gems , prostrated at and worshipped the lotus feet of Paśupati (Śiva) , gave away with great pleasure heaps of gold and lustrous gems, contracted relationship with Gangarāja, who wore garlands of sweet-scented flowers , and performing on earth countless (gifts of) Gōsahasra, hiranyagarbha and tulābhāra, relieved the distress of (the Brāhmaṇas) who studied the Vēdas, renewed the palaces and the high ramparts (of the capital towns)[5] named Kūḍal (i e, Madura), Vañji (Karūr) and Kōḷi (Uṟaiyūr) and ruled the whole earth (bounded) by the roaring ocean

(L 88) Then (came) his son Neḍuñjaḍaiyan, the king of the Nēriyar (i e, the Chōlas), who (wore) a high crown covered with flowers and gems, who kept (his) council secret, who was respected for his virtues (and possessed) an army of battalions (as extensive) as the rising noisy ocean, who was afraid of (committing) sins, who had no wants, who was the lover of the learned (Panditavatsala), death to his enemies (Parāntaka), a Pārtha (i e, Arjuna) in (wielding) the bow, clever in his designs, cruel to the wicked, the enemy of the Kali (age) (Kalippagai), the performer of noble deeds, the abode of mercy, a Kinnara in music, firm as mountain, the smasher of heroes, he who equalled Manu, whose commands were obeyed, who was strong as

---

[1] The king having conquered the Chēra and the Chōla, apparently appropriated their crests also, viz , the bow and the tiger and their titles Vānavan, Śembiyan and Śōlan

[2] The word ēyennāmai is translated tentatively.

[3] Śen-godi and pudān-koṭṭu may have to be interpreted in the sense of ' brilliant flag' and ' brand new drum ' (?), which perhaps were the boast of the Āyavēl

[4] I e made it all his own

[5] We must understand after eṇṇum, some word like nagarangaḷin   But it is also possible that māda māmadil is a recognised term (rūḍha-nāma) for a capital town with palaces and fortifications, cf the term as it occurs in l,

104

wind, the foremost of the valiant, master of heroism, renowned for good behaviour, free from (all) blemish, Punappuliyan, Sinachcholan, Srivara, the paramour of Śrī (i.e., Lakshmī), the Tennan (i.e., Pāndya) and Vānaven (i.e., Chēra) ¹ who long hard battle the bow and whose one word (of command) was accepted by the earth (bounded by) the noisy sea, who appeared in the form of Vishnu with victory thrice fold² prove long the earth under his cool white umbrella, well praised by the goddess of the flower (i.e. Lakshmī), the goddess of the earth and the goddess of the tongue (i.e., Sarasvatī), who began his rule so brilliantly that the strength of the lord of Kali was weakened; who in the battle of Pennāgadam (surrounded by) an expanse of water and flowery groves and (situated) on the southern bank of the Kāvēri of blooming flowers and well-watered paddy fields, defeated the Kēdara (king), who inconsiderately came and attacked (him) with his four-fold big army spread on all sides of the extensive earth girt by the black ocean, and drove (him) into the forest; and who crushing and driving in a fierce battle the Āya-Vēl and the Kurumbas that came and attacked (him) in great numbers, advanced with fiery spears and gained a victory over them in a battle at Nāttukkurumbu (i.e., Kurumbu-nādu) (so that they) sought shelter in forests for (their) fortifications

(L. 103) While the third year of the reign of this (king) was current, one (particular) day a bystander of Kūdal (i.e., Madura) (the city of) mansions and high ramparts, having cried out (by way of complaint)², the king himself at once called him mildly and was pleased to ask him first "what is your complaint" The bystander submitted thus "Oh! Mighty king of powerful army! Formerly without swerving from the pure (path) prescribed by law, (the village) called Vēlvikudi included in Pāganūr-kūrram, whose flowery groves touched the sky was designated Vēlvikudi and was granted through the Iḍu (Brahmans) by your ancestor, the great lord known as Palyāgamudukudumi-Peruvaludi, who protected (the earth) girt by the ocean with an army of spearsmen who never miss (their aim). It has (since) been resumed by the ignoble (yet) ocean-like army of the Kalabhras" The king gently smiled and said, "Very well, very well, prove your antiquity (of the gift) by (a reference to) the district (assembly) and receive (it back)" He (the supplicant) proved then and there, the antiquity of his (claim) by (a reference to) the district (assembly) Thereupon the powerful king, of long arms holding the bow, being overjoyed was pleased to declare "what was granted formerly by my ancestor according to rule, is also granted by Us," and so saying he, of (many) chariots and ocean-like army, gave (it) with libations of water to Kāmakkāni Narchingan, the headman of Korkai

(L. 118). The four big boundaries of this (village) given in full detail are —(The eastern boundry is) to the west of the boundary of Nagarūr surrounded on (all) sides by faultless flower-gardens The southern boundary of this (is) to the north of the field (called) Kūlvandai-śēy of Kulandēvan and of the banyan tree in the Kalandai pond The western boundary of this (is) to the east of the mound (peruppu) on the western side of the field (called) Odumaiyiruppai-śēy of the faultless Korrapputtūr And the northern boundary of this (is) to the south of the mound on the northern side of (the village of) Pāyal where lotuses grow in canals

(L. 124). The land included within the four big boundaries thus described is also given away by us, inclusive of kārānmai and miyātchi, in the same manner as it had been given formerly by our ancestors

(L. 126) The ānatti of this (grant) correctly described is Madavikalan, Mārangāri, the crest-jewel of the Vaidyaka family entitled Mūvēndamangalappēraraiyan who was favoured by the king of kings, whose army fought powerfully like a thunderbolt, in battles where

machines shaped like wild hogs (*ēnappori*) killed (*the enemies*) in (*close*) fight with (*drawn*) swords when the kings of the east (Pūrvarājar) possessing clámorous battalions of fighting men rose up, and put to flight with (*great*) loss in an infantry attack at Venbai, the Vallabha of a vast army of archers, on the occasion when the excellent daughter of Gangarāja who wore a garland of highly scented flowers (*dribbling*) honey was secured and offered to Kongarkōn (i.e., the Pāṇḍya king)[1], who was a prince of the race of Karavandapurattavar, who possessed a powerful and big army that crushed the pride of those who came to fight being (*thither*) brought together by (i e., under the leadership of) kings wearing many bracelets and possessing an army of spearsmen who wielded deadly weapons

(L 134). Kāmakkāni Suvaraṇ Singan, the headman of Koṟkai, who owns this *brahmadēya* reserving for himself one-third of this (*village*), gave the (*remaining*) two parts to fifty Brāhmaṇas with libations of water. In this are included the four and a half *paḍāgāras* (*of land*) of Mūrti Eyin in approved by the (*village*) assembly. And in the part reserved for himself in this (*village*) he gave with the approval of the (*village*) assembly four *paḍāgāras* to his younger brothers and six *paḍāgāras* to his younger paternal uncle's children And the owners of the three parts with their united approval gave four *paḍāgāras* (*of land*) to the general (Senāpati) Ēnādi *alias* Sāttan Sāttaṇ, who composed[2] this eulogy (*praśasti*)

(V 18) The *ājñapti* of this (document) was Mangalarāja, the very sweet (*madhuratara*) poet (*kavi*) and orator, well versed in the sciences, a Vaidya and a resident of Karavandapura.

(V 19) Oh ! Dharma ! A (*learned*) man must render protection to the deeds of others. Indeed (*these are*) the feet acquired by (i e , on which stands) great fame The world was all created by Dhātri (Brahman) Still kings desirous of merit protect the earth.

(V 20) No gift is greater than the gift of land, nor is there a greater sin enjoined (*on man*) than (*that of*) resuming land (*already given*)

(V. 21). Oh ! Gladdener of your race ! He that makes a gift on this earth blesses (*his*) ten generations past and future ; and he that takes away (*that which has been given*) destroys ten generations past and future

(V 22) To him that robs land given by himself or by others, there is no expiation-anywhere except in the dreadful hell

(V. 23) Lands have been given away by many. Different kings are ruling (*them*). The fruit (*of protection*) belongs to him whose land it happens to be (*at the time*). These four are verses in the Vaishnava-Dharma

(L. 151) " The flower-like feet of those who protect this (*charity*) shall be on my crown " The king himself was thus pleased to say and caused a copper-plate grant to be executed at once.

(L 152.) Suttakēśari-pPerumbānaikkāraṇ who engraved this (*document*), and to whom were allotted through the favour of the great men (*of the village*) one house-site, two *mā* of (*wet*) field and one[3] dry field received (*the above*). This is the signature of Yuddhakēśari-Perumbānaikka[ra]ṇ.

---

[1] See above, p 307. If we took Kongarkōṇ as referring to the king of the Kongas, the reason for Māraṅgāri taking part with the Konga king will have to be explained. So far as we know, the Konga king was an enemy of the Pānḍya and was on several occasions defeated by him

[2] The word *pāḍinᵃ* clearly indicates that the composition was in verse.

[3] Perhaps one *ma*.

the reading in the other document also, the sense being that as this king furnishes a living example people have to believe in the historical reality of the rulers like Prithu, Sagara, etc The remaining two words, as is shown by this plate where they occur in line 35 and line 42, respectively, were correctly read by him

The charter was issued by the devout worshipper of Sugata or Buddha, the *Paramēśvara-Paramabhattāraka* and *Mahārājādhirāja*, the illustrious Dēvapāladēva, the son and successor of Dharmapāla, who is regarded to have been the most powerful of the Pāla kings of Bengal As I have just stated, its introductory portion is identical with that of the other grant and gives the genealogy of the donor which has already been discussed by scholars The formal part of the grant, which the inscription registers, is worth considering The wording is the same as we find in the other document The officials mentioned are also similar, including the " *Pramātri* " and the " *Sarabhanga* ", excepting the " *Prāntapāla* " who is left out, though the order in which they are named is different Amongst the names of the countries mentioned in line 35 of the Mungir (Monghyr) plate, this inscription puts *Ōḍra* in place of *Gauḍa* and omits *Lāṭa* altogether. Herein we are told that Dēvapāladēva at the request of the illustrious Bālaputradēva the ruler of Suvarnnadvipa, made through an ambassador, granted five villages, four of which lay in the Rajagrīha (Rājgir) and one in the Gayā *vishaya* (district) of the Srī-Nagarabhukti (Patna Division) for the increase of merit and fame of his parents and himself for the sake of income toward the blessed Lord Buddha, for various comforts of the revered *bhikshus* of the four quarters and for writing the *dharma-ratnas* or Buddhist texts (i e for the three jewels) and for the upkeep of the monastery built at *Nālandā* at the instance of the said king of *Suvarnnadvipa* The endowment, being entirely Buddhist, forms a distinctive feature of the grant and amply justifies the epithet of *parama-Saugata* applied to the donor The four villages granted in the Rājagrīha *vishaya* were Nandivanāka, Manīvātaka, Natikā and Hastigrāma and the one in the Gayā *vishaya* was called Pālāmaka As is usually the case in such grants, this part of the document ends with the date of the endowment which is the 21st day of Kārtika of the (regnal) year 39 and is written after the orders of the royal donor demanding regular payment of all the revenues due for the purposes noted above

The second side of the plate first gives the well-known imprecatory and benedictory verses and, thereafter, introduces Balavarmman who acted as the dūtaka in this ' meritorious undertaking' and whom it describes as the 'overlord of Vyāghratatī-mandala, ever ready to fight his foes independently' Evidently he was the official of the King of Magadha entrusted with all arrangements to be made in connection with the grant Then the inscription supplies, though unfortunately too meagre, an account of Bālaputradēva, the king of Suvarnnadvipa at whose instance the endowment was made giving, also, some information regarding his ancestry. It is mainly in this connection that this document is specially interesting and possesses considerable international value. We learn that the dynasty to which Bālaputra belonged was that of the Śailēndras, who were Buddhists and held the island of Java under their sway about the eighth century of the Christian era or the Śaka year 700 The latter fact about the Śailēndras is already known from the Kalāsan inscription which has been published by Dr. (now Sir) R. G Bhandarkar[1] and Dr J L A Brandes[2] But this Nālandā copper-plate introduces to history for the first time srī-Bālaputradēva, 'the Śailēndra King of Suvarnnadvipa together with some of his relations, as well as the *dūtaka* (of the grant), namely, Balavarmman

The illustrious Mahārāja Bālaputradēva, our inscription tells us, was the overlord of Suvarnnadvipa His mother was Tārā, the daughter of a King Dharmasētu of the lunar race and

[1] *Journal* of the *Bombay Branch* of the *Royal Asiatic Society*, Vol XVII, Part II, for 1887, Art I.
[2] The *Tydscrift voor de Taal-,Landen-Volkenkunde van Nederlandsch Indië*, XXXI (1886), p 240 sq.

the queen consort of the mighty king who was the son of the renowned ruler of "Yavabhūmi." The latter, we are told, was the ornament of the Śailēndra dynasty and 'his name was conformable to the illustrious crusher or tormentor of his brave enemies'. Though the epigraph gives high praises for all these rulers, yet it contains no other information regarding their identity. The name of the father of Bālaputradēva is not given at all but the name of the grandfather is said to have been something like 'Śrī-vīra-vairi-mathena', meaning 'the illustrious destroyer of heroic foes.' This would lead us to surmise that the name must have been one like Pararivarddhi-dēva, Śatrañjaya, Arimarddana, Arindama, etc., but what it really was I am not in a position to find out. The Yavabhūmi and the Suvarnnadvīpa are evidently identical with the Yavadvīpa and the Suvarnnadvīpa islands spoken of in Sanskrit works like the *Rāmāyaṇa*[1] or the *Kathāsāritsāgara*[2] and are unquestionably the modern Java and Sumatra. While speaking of Bālaputradēva as the king of Suvarnnadvīpa and his grandfather as the ruler of Yavabhūmi, the author of our inscription, apparently, took both the islands as one considering them practically united. As M. Duroiselle kindly tells me, the consensus of opinion, arrived at by scholars like Barth and Kern, is that Suvarnnadvīpa and Yavadvīpa are the same, that is Java-Sumatra. The document goes to confirm the view that Yavadvīpa is Java proper and that Suvarnnadvīpa is properly Sumatra. This Suvarnnadvīpa, however, is different from the Suvarnnabhūmi, which, as M. Duroiselle has kindly informed me, in its most extended sense refers to Indo-China, but, particularly, to the country extending beyond the eastern and northern coasts of the Bay of Bengal or Rāmaññadēśa (i.e., lower Burma.)

Now the question which would present itself for solution is, who were the Śailēndras mentioned in the plate? There are only two Javanese inscriptions in Nāgarī, known to me, which were issued by a king of the Śailēndra dynasty. One of them, to which I have alluded above, commemorates the foundation of a temple of Tārā, the well-known Goddess of the Mahāyāna pantheon, the setting up of her image, and the building of a monastery in the year 700 of the Śaka era during the prosperous reign of a king of this dynasty[3] whose name to our regret is not forthcoming. The other[4] inscription is not yet published and the following information regarding it I owe to the courtesy of Dr. Bosch, Director of Archaeology in Netherlands-India. It comes from Klurak, a site between the Prambanam and Sewn-temples in Central Java and belongs to the Śaka year 704, the object being to commemorate the erection of an image of Mañjuśrī, another noted divinity of the Mahāyāna pantheon. In one of the lines of this inscription Dr. Bosch reads *rājñā dhṛtā dhṛtīmatā dharanīndranāmnā* and finds the king's name to be Indra, though one could take it to be Dharaṇīndra (earthly Indra) as well. Yet another inscription I know of, which is connected with this evasive race of the Śailēndras, comes not from Java but from India and, like our Nālandā inscription, records the erection of a monastery and an endowment for it. It is engraved on twenty-one copper-plates now preserved in the Leyden Museum in Holland and belongs to the reign of the Chōla King Rājarāja-Rājakēsari-varmman (985-1013 A.D.) This highly interesting document tells us that the illustrious king Māravijayōttungavarmman of the Śailēndra dynasty and the lord of Śrīvijaya[5] caused to

---

[1] Canto IV, Chap. XL, St. 30, and the *Tilaka* commentary on these verses. Here we find that Java in remote antiquity formed a large principality which comprised not less than seven minor states.

[2] Tharaṅga, 57, Sts. 96, 134, 173, etc.

[3] रावे प्रवर्दमाने राज मौले-द्रवश तिलकस्य. Dr. Bhandarkar read in the sixth line of this inscription *Śailēndra-varmmatanujasya* and though he took it to be *Śailēndravarmman* was the proper name of the father of the donor whose name he took to be Panāmkaraṇa. The correct reading, however, as the late Dr. J. L. A. Brandes has shown, must be *Śailēndravamśatilakasya*.

[4] Except these two inscriptions there exists a number of fragments of inscribed slabs, which according to Dr. Bosch, might be attributed to the Śailēndra race but they are all too weather-worn to be deciphered.

[5] Dr. Hultzsch takes Śrī-Vijaya of Tamil inscriptions as the equivalent of Śrī-vishaya (above, Vol. IX, p. 231).

be built a lofty and very beautiful monastery at Nāgapattana, the present port of Negapatam[1] and that it was endowed by the Chōla king Rājarāja, thus furnishing an exact parallel to the Nālandā monastery of our plate[2] This Śrīvijaya is the same as the San-fo-tsai of the Chinese Annals and, according to M. George Coedes, must be identified with the kingdom of Śrīvijaya or Palembang, which is a residency of Sumatra[3] The Leyden grant says that Māmvijayōttuṅgavarmman was the overlord (adhipati) of Śrīvijaya who, while extending the kingdom of Katāha, caused that monastery to be built in the name of his father. Thus on the authority of this invaluable record it becomes clear that, about the end of the 10th century A. D., Sumatra was governed by the Śailēndra dynasty to which king Māravijayōttuṅga-varmman or his father Chūḍāmanivarmman belonged That both Sumatra and Java were under the sway of the Śailēndras about the ninth century we glean from the Nālandā copper-plate inscription That they were governed by the same dynasty in the seventh century of the Christian era we learn from the two inscriptions to which I have referred above. In one of the inscriptions[4] engraved on the south wall of the well-known temple at Tanjore we find that Rājēndra-Chōla caught a king of Kaḍāram, named Saṅgrāmavijayōttungavarmman, and took his vehicles as well as accumulated treasure. This king of Kaḍāram in the light of the Leyden grant was, probably, the successor of Māravijayōttuṅgavarmman, the Śailēndra king of Śrīvijaya spoken of in it. If the Tanjore inscription is to be trusted—I do not think there is any reason why it should not be—we can say that Rājēndra-Chōla, while capturing the king, succeeded in conquering the kingdom of Śrīvijaya or Palembang The Leyden plates tell us that he confirmed the grant made by his father Rājarāja for the monastery built by the Śailēndra king Māravijayōttuṅgavarmman or the predecessor of the very ruler whom he caught and dispossessed of heaps of treasures. This would lead us to surmise that Saṅgrāmavijayōttungavarmman proved refractory and the Chōla King had to take the extreme step to bring him round. Here it may be remarked that in the documents, known at present, these Śailēndras or the rulers of Śrīvijaya are no where mentioned as the feudatories of the Chōlas or other Indian kings. Building convents or vihāras in one's territory does not necessarily indicate tutelage[5] though it does show friendship or mutual regard. That the Śailēndras founded monasteries in India at Nālandā or elsewhere certainly signifies their being fervent Buddhists. These vihāras, like the one founded at Bodh Gayā by Mēghavarm of Ceylon during the Gupta epoch, gave shelter to their own people as well as others Dēvapāladēva was a staunch Buddhist. He endowed the monastery, which Bālaputradēva, the Javanese King, founded at Nālandā, at the latter's express request, communicated to him through a dūtaka or ambassador. But this fact alone cannot imply that the ruler of Java was a vassal of the King of Magadha. Though the capture of the King of Kaḍāram by Rājēndra-Chōla in later days indicates submission no doubt, yet I think, to show that the Śailēndras were really the feudatories of the Chōlas, proof is still wanting. Under the existing circumstances what we can safely assume is that the relations of these Kings were rather based on trade and traffic and were of a peaceful nature.

---

[1] It was probably this structure, which, as the late Mr. Smith has said in his Early History of India, 3rd ed., p. 466, survived in a ruinous condition until 1867, when the remains of it were pulled down by the Jesuit fathers and utilised for the construction of Christian buildings.

[2] The splendid convent built by King Mēghavarṃ of Ceylon at Bodh-Gayā near the holy Bōdhidruma about the year A. D. 360 with the permission of Samudragupta, the Great, affords another instance of this kind. For a brief account of it see Smith's Ancient History of India, 3rd ed., p 287.

[3] Encyclopædia Britannica, XI ed., Vol. XXVI, p. 73. For mention of Śrīvijaya in an old Malaya inscription probably of the 7th Century A. D., lately found in Palembang, see Ph S. Van Ronkeb's notice in the Acta Orientalia, Vol II, Part I, p 21

[4] South-Indian Inscriptions, Vol II, pp. 105 ff.

[5] The late Mr. Venkayya (A. S. R., 1911-12, p. 175), apparently, assumed that the Śailēndras were feudatory to the Chōla Kings,

connection with the Chēdi family[1] It is also noteworthy that sometimes their names end in *varmman* From the records noticed above we find that the names of the Sailēndras of Java-Sumatra or Srivijaya ended in *varmman*[3] The name of the Sailōndra ruler given in the Nālandī plate on the other hand ends in *dēva* This looks rather strange The name Bāla-putra itself, signifying ' young son ' is curious. This ending of *dēva*, however, occurs only in the prose and formal portion but not in the other or metrical portion, which describes and eulogises these Sailēndras This would go to suggest that the suffix was left out because the metre did not require it, or possibly because it did not form an integral part of the name and would have been replaced by *varmman*, a general suffix or surname of the ruling caste or the Kshatriyas The name, however, is pure Sanskrit as is the name of Tārā the mother of Bālaputradēva, or Dharmasētu, her father, and would point to emigration from India Had the names of the two ancestors of Bālaputradēva, that is to say, his father and grandfather, been given we could be definite in the matter, for, if these names were un-Indian, as in the case of Kundinga, his son Asvavarman and grandson Mūlavarman of Borneo, we could conclude that the Sanskrit names must have been taken after conversion to Hinduism, or rather Buddhism But in none of the names of the Sailēndras do we find any foreign sound at all, suggesting that they were the natives of the islands originally and came into the fold of Buddhism afterwards

The names of the Pāla kings and other personages mentioned in the introductory portion of this grant have been dealt with by Kielhorn or other scholars in connection with the contents of the Munger copper-plate inscription So I need not notice them here But, besides them and the Sailēndras, our record speaks of two more persons and they require special mention One of them is Dharmasētu whom the inscription describes as a scion of the Lunar race and the father of Bālaputradēva's mother, namely, Tārā To our regret it does not supply any other particular regarding him and it is hardly possible to identify him or to say

[1] Mr. K. V Sabrahmanya Ayyar, to whom I am indebted for this information, has kindly given me the following note on the Malaiyamāns —

"Ancient Tamil works mention the names of a number of Malaiyamān chiefs, who might be attributed to the 7th and 8th centuries A. D Some of these are —(1) *Malaiyamān Tirumudikkāri*, (2) *Malaiyamān Sōliya-Ēnādi Tirukkannap*, (3) *Malādar-Kōmān Meypporul-Nāyanār* and *Narasinga-Munaiyaraiyar of Tirumunaippādi* Their capital was Tirukoilur, the head quarters of a *taluk* in the South Arcot district and a railway-station in the Kātpādi-Villupuram section of the South Indian Railway It is said to have been situated within the Chēdi country.

The Malaiyamān chiefs appear to have been rendering help to one or the other of the principal powers of the South, *viz*, the Chēra, Chōla, Pāndya and the Pallava. Narasingamunaiyaraiyar was a contemporary of the Saiva saint Sundara-Mūrti-Nayanār of the 8th century A D he is counted as one of the canonised 63 Saiva devotees of the Tamil country In the account given of No 3, in the Tamil hagiology, *Periyapurāṇam* figures a Tattan, whose name may be regarded as a variant of Datta Besides, one of the poems of the Tamil anthology, *Pattuppāttu* was composed in honour of a certain " Ārya king Piragadattan (Bhriga-Datta)" It may be noted that the Malaiyamān chiefs belonged to the Bhrigu race as is evidenced by their inscriptions Epigraphical reference to Narasinhamunaiyaraiyar is found in the Tanjore inscriptions of the Chola King Rājarāja I (A D. 985 1013) In an early stone record of Rājukēsarivarman found at Tiruvādīsvaram near Kumbakonam, of about the 9th century A D mention is made of Milāduduyar-palli

It is interesting to note that the later members of the Malaiyamān family, who figure in numerous stone inscriptions, call themselves invariably Chēdiyarāyas (Chedirajas) and they are mostly subordinates of the Chōlas of the 10th to the 13th centuries A D The appellation *Chēdiyarāyan*, assumed by almost all the chiefs, if it is not a mere accident, as it could not be, must indicate that they were the rulers of the Chēdi country This fact taken with the names like Datta would make one infer a colonisation at some remote past of a branch of the line of Chēdi Kings, in the South Arcot district, where we find them."

[2] E Hultzsch, *Ep. Ind*, Vol VII, pp 186 and 146

[3] Dr. Vogel in the aforesaid publication (page 194) remarks —" Considering that among the dynasties of India proper there is a great variety of such royal surnames, as *āditya, gupta, chandra, dēvapala, rāta, vardhana simha*, and *sēna*, the almost universal employment of names in *varmman* in the Far East is certainly very remarkable" The instance of our Bālaputradēva will furnish an exception

2 x

whether he was an Indian king or some ruler in the Far East   The name whether it is read as Dharma or Varma-sētu appears to be new   The other interesting name occurring in the document is that of Balavarmman the ruler of Vyāghratati-mandala, who acted as *dūtaka* on behalf of the Magadhan king. As to why he was selected or what special connection he had with the ruler of such a remote island as Sumatra or Java, and whether he had been there or known personally to that king our inscription makes no mention   Apparently, there was no direct political relationship between the two, for, we know from the Khalimpur[1] plate of Dharmapāladēva that the Vyāghratatīmandala lay within the *bhukti* of Pundravardhana, which was under the sway of the Pāla king Dharmapāla and, evidently, of Dēvapāladēva after him. Pundravardhana is the same as Paundravardhana—Pundra and Paundra being synonymous—which is the modern Rājshāhi district of Bengal[2]. The use of the word *adhipati* would indicate that in this instance at least the term *mandala* connotes a larger area than *vishaya*, which in the majority of cases seems to include a *mandala*[3]. During the reign of Dēvapāladēva, Vyāghratatī was governed by a distinct ruler called Balavarmman. The way in which he is praised in this epigraph, as the right arm of the Emperor, would show that he had a high rank even though he was one of the feudatories of Dēvapāladēva As, however, our plate gives no genealogy or particulars about him his personality is very vague. A few homonymous[4] rulers are known to have flourished about that time but they appear to be quite different personages and even their dates will not agree with that of this plate It looks curious that though the charter mentions the *dūtaka* of the King of Magadha yet it leaves the ambassador or ambassadors of the Javanese King unnamed altogether.

The vague manner in which the inscription describes the rulers of the Far East or Sumatra-Java and their relative king of the lunar race would show that its author did not know much of them He knew of Bālaputradēva and his mother Tārā. The latter he compared to the goddess of that name It is not improbable that the grant registered in the epigraph was made chiefly at her instance

Our plate mentions several places calling for remarks Out of these, I have already noticed three, namely, *Suvarnnadrīpa*, *Yavabhūmi*, and *Vyāghratatī* Of the remaining ones Nālandā is the most important. The way, in which this record speaks of it, would show that it continued to be as important a centre of Buddhist lore as it was during the time of Hiuen Tsang's visit The spelling of the name given in this document is Nālandā which is the correct way of writing it The same spelling is given in a votive inscription on the image of

[1] *Ep. Ind.*, Vol. IV, pp. 243 ff *J B B A. S*, LXIII (1894), pp. 39 ff.

[2] Smith *Early History of India*, p. 373. As has already been stated by Cunningham (*A S R*, Vol. XV, pp. 112 ff.) Kāntāra is another name of Pundra or Paundra, *i.e.*, sugarcane, and the Mahākāntāra of the Allahabad Inscription of Samudragupta, the Great, was probably an older name of this province which, about the middle of the fourth century of the Christian era, was governed by a King Vyāghra. Thus it does not appear to be improbable that the district of *Vyāghratati* or the tiger's precipice—unless of course *vyāghra* is taken in the sense of castor oil in which case the word *Vyaghratati* would be the slope marked or overgrown with castor plants,—was named after this tiger king.

[3] This would rather show that no mistake was made in the text of the Khalimpur grant and that Kielhorn's statement in the *Ep. Ind.*, Vol. IV, p 258, footnote 3 that it was, will be obviated

[4] For instance we know of a Balavarman, the lord of Prāgjyōtisha (Gauhati or Assam) from the Nowgong copper-plate (Dr A F. Hoernle, *J. B. A.S* LXVI, pp 285 ff.) and another of Kārusha or rather Brihadgriha (Kielhorn, *Ind. Ant* Vol. XX, pp 123 ff). On palaeographic grounds the former of the two has been assigned to the last quarter of the 10th century or say nearly one century later than the date of Dēvapāladēva. The other is too little known to admit of identification. The third ruler of the name, who will synchronise with our document, was the father of Avantivarman II, who was the feudatory of Mahēndrapāla of Kannuj (cir. 890 A. D.), To think of identifying him with the Balavarmman of the Nālandā plate will be altogether unreasonable, for he was the ruler of Kāthiawar, or Saurāshtra and a feudatory of the formidable rival of the monarch of Bengal.

Sankarshana which was dug out of the same site[1] and the newly discovered statue of Tārā. It again occurs not only in some Jaina writings but such an old work as the *Dīghanikāya*[2]. However, it seems to be noteworthy that none of these works called Nālandā a university but only a prosperous town though Hiuen Tsang describes it as if it were a University The way in which it is described in our plate would show that it was really a centre of Buddhist learning

As to the remaining place-names mentioned in this document, I think, Śrīnagara or Śrīnagara-bhukti must be identified with modern Patna, which as a district, includes Rājagriha (Rājgir) and, as a division or commissionership, comprises the district of Gayā, even now. It is true that in the Khalimpur grant of Dharmapāladēva, which has been referred to above, the name given for the city is Pātaliputra and not Śrīnagara or Nagara, still, I think, there were two designations, the one, *viz*, Pātaliputra, which meant the whole town and the other, *viz.*, Śrīnagara, the main part of it, like the Bankipore of to-day. Nagara means the chief town generally, but in this case it meant *the* town, the prefix *Śrī* implying prosperity or wealth of the town. In other words Pātaliputra was the *pattana*[3] and the seat of Government, especially in earlier days during the supremacy of the Mauryas or the Imperial Guptas,[4] lay there, and Śrīnagara was its principal portion where the office of the *bhukti* or division was situated   One was concerned with the whole government but the other only with eight hundred[5] villages coming in its jurisdiction or *bhukti*. Thus Śrīnagara must have been a part of the whole which was termed Pātaliputra[6] That, apparently, is the reason why the latter and not the former appellation of the town is to be met with in literature.

That Rājagriha and Gayā are respectively the Rājgir and Gayā of to-day requires no demonstration   The latter is a district still, though the former has now dwindled into a ruined town of the Bihār subdivision of Patna.

Regarding the villages which formed the object of the grant or endowment registered in the charter, we are told that Nandivanāka and Maṇivātaka were situated in the Ajapura-*naya* subdivision, Naṭikā in the Pilipinkā, and Hastigrāma in the Achalā-*naya* or subdivision of the Rājagriha *vishaya* or district, and that Pālāmaka was situated in the Kumudasūtra *vīthī*, a subdivision of the Gayā district. If similarity of sound can be depended on, I would propose the following identifications to which proximity of Nālandā will lend a great support   The Ajapura 'naya' or subdivision of the inscription may possibly be represented by the Ajaipur[7] village in the Ajai Hisse Chahāram Mauzā in the Bihār Thānā and the two villages Nandivanāka and Maṇivātaka, granted in it, would be the Nadiune or Naunvan and Manianwan villages of these days, which are included in the Bihār Thānā. Pilipinkā I am inclined to identify with the Pilkhi or Pilkee Mauza and the Naṭikā village with the Nai Pokhar of to-day, both lying in the Silāo Thānā. Though I am unable to offer any identification for the ancient Achalā yet, I fancy, the village Hasti or Hastigrāma of the grant might be the Bethoa Bighā village of the Bihār Thānā if not the Hathi Tolā of the Maner Police subdivision   The old village directory[8] of the Gayā district available to me does not, apparently, give any name

2 x 2

resembling the Kumudasūtra (or sūnu) or the Pālāmaka of our record and I refrain from offering a conjecture regarding their identity

In connection with these place-names, it is interesting to note, that our document supplies one or two territorial terms, which appear to be new. The term *mandala*, as I have remarked above, is here used, as in the grant of Amma II,[1] in the sense of *dēśa*, of which *vishaya* was a subdivision. The word '*vīthī*', which generally signifies a market, road-way or the like, appears to have been used, in this charter, in the sense of a division smaller than *vishaya*. Similarly the term '*naya*' seems to imply a like division. The use of these terms would show that *bhukti* was divided into *mandalas* which were subdivided into *vishayas*, the latter being again portioned into *vīthīs* or *nayas*[2] It is noteworthy that our document employs the term *naya* in the case of Rājagriha *vishaya* and *vīthī* in the case of Gayā *vishaya*. The former occurs regularly after (1) Ajapura, (2) Pilipinkā and (3) Achalā, which lay in the district or *vishaya* of Rājagriha, while the latter term is to be found in connection with the district or *vishaya* of Gayā only. This would indicate that in the two *vishayas*, which were so contiguous to each other, there were, probably, different subdivisions made, apparently, for revenue purposes, Rājagriha being subdivided into *nayas* and Gayā into *vīthīs*. Thus, we can say that the villages Nandivanāka and Manivātaka lay in the subdivision or *naya* of Ajapura, Natikā in the *naya* of Achalā, all these falling within the Rājagriha *vishaya*. The village of Pālāmaka, on the other hand, which belonged to the district or *vishaya* of Gayā, lay in the subdivision of Kumudasūtra, i.e., Kumudasūtra-*vīthī*[3]

[2] It may be noted here that the term *vīthī* is also used in the sense of a division in the Ghughrahati plates of Samāchāradēva which have been edited by Mr R. D. Banerji, in the August 1910 number of the *Journal of the Asiatic Society of Bengal*. Mr Bhattasal, who is re-editing the grant for this journal, seems to take the word in its usual sense, but, in the light of this Nālandā document, his rendering cannot hold good

resembling the Kumudasūtra (or sūṇṇ) or the Pālamaka of our record and I refrain from offering a conjecture regarding their identity.

In connection with these place-names, it is interesting to note, that our document supplies one or two territorial terms, which appear to be new. The term *mandala*, as I have remarked above, is here used, as in the grant of Amma II,[1] in the sense of *deśa*, of which *vishaya* was a subdivision. The word '*vīthī*', which generally signifies a market, road-way or the like, appears to have been used, in this charter, in the sense of a division smaller than *vishaya*. Similarly the term '*naya*' seems to imply a like division. The use of these terms would show that *bhukti* was divided into *mandalas* which were subdivided into *vishayas*, the latter being again portioned into *vīthīs* or *nayas*[2] It is noteworthy that our document employs the term *naya* in the case of Rājagṛha *vishaya* and *vīthī* in the case of Gayā *vishaya*. The former occurs regularly after (1) Ajapura, (2) Pilipinkā and (3) Achalā, which lay in the district or *vishaya* of Rājagṛha, while the latter term is to be found in connection with the district or *vishaya* of Gayā only. This would indicate that in the two *vishayas*, which were so contiguous to each other, there were, probably, different subdivisions made, apparently, for revenue purposes, Rājagṛha being subdivided into *nayas* and Gayā into *vīthīs*. Thus, we can say that the villages Nandivanāka and Manivātaka lay in the subdivision or *naya* of Ajapura, Natikā in the *naya* of Achalā, all these falling within the Rājagṛha *vishaya*. The village of Pālamaka, on the other hand, which belonged to the district or *vishaya* of Gayā, lay in the subdivision of Kumudasūtra, i.e., Kumudasūtra-*vīthī*.[3]

³ The ace of the *avagraha* may be marked.　　　⁴ Ditto.

subdivision (*naya*) of Achalā and the village of Pālāmaka which comes under the subdivision (*vīthī*) of Kumudasūtra (or Kumudasūnu), that falls within the limits of the district (*vishaya*) of Gayā—Dēvapāladēva, being in good health, issues commands to all the persons who have assembled here,—the *Rājarūnaka*[1], the *Rājaputraka*, the *Rājāmātya*, the *Mahākārttākritika*, the *Mahādandanāyaka*, the *Mahāpratīhāra*, the *Mahāsāmanta*, the *Mahādauhsādhasādhanika*, the *Mahākumārāmātya*, the *Pramātṛ*, the *Śarabhanga*, the *Rājasthānīya*, the *Uparika*, the *Vishayapati*, the *Dāśāparādhika*, the *Chauröddharanika*, the *Dāṇḍika*, the *Dāṇḍapāśika*, the *Śaulkika*, the *Gaulmika*, the *Kshētrapāla*, the *Kōṭapāla*, the *Khaṇḍaraksha*, the *Tadāyuktaka* the *Viniyuktaka*, the *Hastyaśiōshtranaubalavyāpṛitaka*, the *Kiśōra-vaḍavā-gō-mahishydhikṛita*, the *Dūtapraishanika*, the *Gamāgamika*, the *Abhitvaramānaka*, the *Tarika*, the *Tarapatika*, the *Oḍras* (men from Orissa), the *Mālavas*, the *Khaśas*, the *Kulikas*, the *Karnnāṭas*, the *Hūṇas*, the *Chāṭas* (or village officers), the *Bhaṭas*, the servants and others, dependent on his lotus-feet, who are not named here, and the residents, the Brahmanōttaras, the village-elders, householders, the *purōgas*, the *Mēdas*, the *Andhrakas* down to the *Chāṇḍālas*—

Ll 33-87   Be it known to you that the above-mentioned villages, namely, the village of Nandivanāka, the village of Manivāṭaka, the village of Naṭikā, the village of Hasti (or Hastigrāma) and the village of Pālāmaka, together with the undivided lands attached to them, unbroken up to their boundaries, grass and pasture-lands,[2] with their grounds, places, mango and *madhūka* (*Bassia Latifolia*) trees, with their water and dry lands, *uparikaras*, *daśāparādhas*, *chauröddharanas*, free from all troubles, exempt from the entry of the *chāṭas* (village officers), and *bhaṭas*, with all taxes due to the king's family or court, with nothing of these to be recovered, according to the maxim of *bhūmichchhidra*, to last as long as the moon and the sun and the earth shall endure, excluding the gifts to gods, and the Brahmans, which were granted before and were enjoyed or are being enjoyed—

Ll 37-42   are granted by us for the increase of the spiritual merit and glory of my parents and of myself.—We being requested by the illustrious Mahārāja Bālaputradēva, the King of Suvarppadvīpa through a messenger "I have caused to be built a monastery at Nālandā" granted by this edict toward the income for the blessed Lord Buddha, the abode of all the leading virtues like the *pra jñāpāramitā*, for the offerings, oblations, shelter, garments, alms beds, the requisites of the sick like medicines, etc., of the assembly of the venerable *bhikshus* of the four quarters (*comprising*) the Bodhisattvas well versed in the *tantras*, and the eight great holy personages (i e the *ariya-puggalas*), for writing the *dharma-ratnas* or Buddhist texts and for the upkeep and repair of the monastery (when) damaged; therefore, this grant should be approved and preserved by all of you[4] out of regard for the merit of protecting gifts of land and because in the confiscation of the same there is a fear of falling into the great hell and the like.   The residents also should be obedient to the order on hearing it and

---

[1] Many of these designations hardly admit of translation   They all occur in several grants and have already been noticed by scholars   So they are left untranslated here.

[2] सरब्यूतिगोचर is usually so translated and यूति is practically left untranslated.

[3] Dr. Thomas is of opinion that the term Bōdhisattva is used here to indicate the monks and would read *tatraka* in place of *tāntraka*. He further thinks that *Buddhabhaṭṭārakasya* depends on *sthānasya*. The term *dharmanētrī* occurs in the *Saddharmapundarīka*, I, 10, 79; II, 102, XI, 5, 7   Burnouf translates it "la regle de la loi," i e the rule of the Law "   For *ashṭa   pudgalasya* see Childers, Pāli Dictionary under *ariyapuggalo* and *puggalo*.

[4] Dr. Krom of Leiden also thinks that the message sent by Bālaputra to Dēvapāla is only contained in the words   "*Śrī-Nālandāyām vihārah Kāritah*"; for, if we assume that the message includes the whole passage as far as its (l 42) it is not clear who are meant by the words *bhavadbhih sarvairēva* (l. 40). These words cannot be applied to King Dēvapāla. Evidently they refer to that king's officials mentioned previously. These remarks appear to be justified but then we would require *iti* after *kāritas*.

should bring to the donees at the proper time the due revenues such as *bhāgabhōgakara*, gold, etc." Samvat (year) 39, Kārttika, day 21.

Ll. 43-50. In pursuance thereof are the (following) verses (nos 16-21) announcing duties (regarding grants)[1].

V. 22 The illustrious Balavarmman who was the right hand of the king, as it were, and who never depended on (others') help for crushing hostile forces, acted as messenger in this religious function

V 23 In this religious undertaking Balavarmman, the illustrious ruler of the Vyāghratatī-mandala, acted as a messenger of the illustrious (Emperor) Dēvapāladēva

V 24 There was a King of Yavabhūmi (or Java), who was the ornament of the Śailēndra dynasty, whose lotus-feet bloomed by the lustre of the jewels in the row of trembling diadems on the heads of all the princes, and whose name was conformable to the illustrious tormentor of brave foes (*vīra-vairi-mathana*)

V 25 His fame, incarnate, as it were, by setting its foot on the regions of (white) palaces, in white water-lilies, in lotus plants, conches, moon, jasmine and snow and, being incessantly sung in all the quarters, pervaded the whole universe

V 26 At the time when that king frowned in anger, the fortunes of the enemies also broke down simultaneously with their hearts Indeed the crooked ones in the world have got ways of moving which are very ingenious in striking others[2]

V 27 He had a son, who possessed prudence, prowess, and good conduct, whose two feet fondled too much with hundreds of diadems of mighty kings (bowing down). He was the foremost warrior in battle-fields and his fame was equal to that earned by Yudhisthira, Parāśara, Bhīmasēna, Karnna and Arjuna

V 28. The multitude of the dust of the earth, raised by the feet of his army, moving in the field of battle, was first blown up to the sky by the wind, produced by the (moving) ears of the elephants, and, then slowly settled down on the earth (*again*) by the ichor, poured forth from the cheeks of the elephants

V 29. By the continuous existence of whose fame the world was altogether without the dark fortnight, just like the family of the lord of the *daityas* (demons) was without the partisanship of Kṛṣhna[3].

V. 30 As Paulōmī was known to be (the wife of) the lord of the *Suras*, (i e. Indra) Rati[4] the wife of the mind-born (Cupid), the daughter of the mountain (Pārvatī), of the enemy of Cupid (i e Śiva) and Lakshmī of the enemy of Mura (i e Vishnu) so Tārā was the queen consort of that king, and was the daughter of the great ruler Dharmasētu[5] of the lunar race and resembled Tārā (the Buddhist goddess of this name) herself

V 31 As the son of Śuddhōdana, (i e the Buddha) the conqueror of Kāmadēva, was born of Māyā and Skanda, who delighted the heart of the host of gods, was born of Umā by Śiva, so was born of her by that king, the illustrious Bālaputra, who was expert in crushing the pride

---

[1] Here come six imprecatory and benedictory stanzas, too well-known to be translated The stanza सर्व्वानेतान् भाविनः पार्थिवेन्द्रान् which is given in the Mungir grant is here left out

[2] The eyebrows become crooked in frowning and the poet by way of *arthāntara-nyāsa* draws a general inference from it

[3] Pun on the words *Kṛṣhna* and *paksha*. Fame is white or bright cf भाविन्य ज्योति पापे यशसि धवलता यद्वत्ते राजकीर्य्यो "Sāhityadarpana," VII-23.

[4] The exact word which certainly has only two letters is not distinct. It may be either Prīti or Śakti as noted above, f n., p. 324. That Rati is meant is absolutely clear from the context.

[5] This name can be read as Varmasētu also.

of all the rulers of the world, and before whose foot-stool (the seat where his lotus-feet rested) the groups of princes bowed

V 32. With the mind attracted by the manifold excellences of Nālandā and through devotion to the son of Śuddhōdana (the Buddha) and having realised that riches was fickle like the waves of a mountain stream, he whose fame was like that of Sanghārthamitra[1], built there (at Nālandā) a monastery which was the abode of the assembly of monks of various good qualities and was white with the series of stuccoed and lofty dwellings.

V 33 Having requested, King Dēvapāladēva, who was the preceptor for initiating into widowhood the wives of all the enemies, through envoys, very respectfully and out of devotion and issuing a charter, (he) granted these five villages, whose purpose has been noticed above for the welfare of himself, his parents and the world

V. 34. As long as there is the continuance of the ocean, or the Ganges has her limbs (the currents of water) agitated by the extensive plaited hair of Hara (Śiva), as long as the immovable king of snakes (Śesha) lightly bears the heavy and extensive earth every day and as long as the (Udaya) Eastern and (Asta) Western mountains have their crest jewels scratched by the hoofs of the horses of the Sun so long may this meritorious act, setting up virtues over the world, endure

No 18—MATTEPAD PLATES OF DAMODARAVARMAN.

By Professor E Hultzsch, Ph.D., Halle (Saale)

This inscription is engraved on five very thin copper-plates, which were found in the village of Mattepād in the Ongole Tāluk of the Guntūr District and forwarded to Rao Bahadur H Krishna Sastri by the Tahsildar of Nellore   The plates measure 6⅔ inches in breadth and 1⅕ inches in height   There are eight inscribed faces, the outer faces of the first and last plates having been left blank   Each inscribed face bears only two lines of writing   The margins of the plates are not raised into rims, but the writing is in fair preservation   The five copper-plates are strung on a ring of the same metal, passing through a hole of about ⅜" in diameter on the left side of the writing   The two ends of the ring, which is about 2½" in diameter, are fixed in the base of an oval seal, which is much worn; it seems to bear, in relief, the figure of a seated bull, facing the proper right.   The weight of the plates, with ring and seal, is 30¼ tolas

The alphabet is of an early Southern type · The Jihvāmūlīya occurs in line 7, and the Upadhmānīya in line 16, final forms of t and m in lines 1, 7, and 15, 16 (twice), respectively. As in the case of the plates of Chārudēvī (above, Vol VIII, No. 12) and of Vijaya-Dēvavarman (Vol IX, No 7), the eight inscribed faces are numbered consecutively, like the pages of a modern book, with the numerical symbols 2, [3], 4, 5, 6, 7, 8 on the left margin; the first plate seems to bear, just as that of Dēvavarman,[2] the sacred syllable ōm in the place of the figure 1   The symbol 2 occurs also in the date (l. 14), and the symbol 1 repeatedly in lines 8-13

The language of the plates is Sanskrit mixed with Prākṛit. Lines 1-14 are in prose, and the two last lines in verse   In the Sanskrit portion consonants following r are doubled, with the exception of t in kartum= and of h in arhanti (l 6). The Sandhi is neglected after °purāt (l 1), °tasya and -sagōtrasya (l. 2), -grāmēyakāh (l 4), -grāmah (l 5), and bhūmih (l 15)

---

[1] This might possibly mean that his wealth befriended the cause of the Sangha.
[2] See above, Vol IX, p. 57.

In lines 8-13 the proper names of the donees and most of the names of their *gōtras*[1] are given in Prākṛit, and in line 14 the Prākṛit form -*samachehharam* occurs. The only other declensional forms are the nominative singular *amśo* (for which we would have expected *aṁśo*) and the genitive singular -*ayyassa* (= -*āryasya* in Sanskrit) in lines 8-13. The vowel *au* has become *o* in *Kondinna* (= *Kauṇḍinya*, ll 8-11) Sanskrit *p* and *b* have been changed to *v* in *Kassava* (= *Kāśyapa*, l 11 f) and *Savarayja* (= *Śabarārya*, l 10) Consonant groups are assimilated, but *śrī* is represented by *siri* in *Sirijja* (l 9). This name, as well as *Nandijja*[2] (= *Nandyārya*, ll 8, 13), *Aggijja* (= *Agnyārya*, ll 9, 11), *Āgasti* (= *Agastya*, l 13), and *Venujja*[3] (for which we would have expected *Venhujja* = *Vishṇiārya*, l 12), are instances of Samprasāraṇa (*i* = *ya*, and *u* = *va*).

The inscription records that, in the 2nd year of his reign (l 14), the Mahārāja Dāmōdara-varman (l 3) granted the village of Kangūra to a number of Brāhmaṇas He was a wor-shipper of 'the truly and perfectly Enlightened one' (*Samyak-sambuddha*, l 1), i e of the Buddha At the same time he boasts of having performed certain Brāhmaṇical rites, viz. Gō-sahasra and Hiraṇyagarbha (l 2 f) These are the names of the second and fifth of the sixteen so-called 'great gifts' (*mahādāna*) of the Purāṇas[4] A similar feat is ascribed to king Attivarman in another copper-plate grant from the Guntūr District, where I translate the epithet *aprameya-Hiraṇyagarbha-prasavena*[5] by 'who is a producer of (i e who has performed) innumerable *Hiraṇyagarbhas*' That this Attivarman (whose name seems to be a Prākritic or Dravidian form of Hastivarman) belonged to the same dynasty as Dāmōdaravarman, is evident from the fact that his family is stated to be 'descended from the lineage of the great sage Ānanda' (ibid., text l 1) while Dāmōdaravarman claims to have belonged to the *gōtra* of Ānanda (below, text l 2) Moreover, Dāmōdaravarman resided at a city called Kandarapura (below, text l 1), which must have received its name from that prince Kandara who is mentioned as an ancestor of Attivarman[6] The characters of the copper-plate grant of this king are decidedly more developed than those of the subjoined grant, which, besides, is partially in Prākṛit, while the former is all in Sanskrit. Consequently, Dāmōdaravarman must have been one of the predecessors of Attivarman

When editing the Gōrantla plates of Attivarman, my late lamented friend Fleet believed this king to have been a Pallava,[7]—chiefly because he interpreted the epithet *aprameya-Hiraṇyagarbha-prasavena* by 'who is of the posterity of the inscrutable (god) Hiraṇyagarbha.' As I have shown above, this rendering is inadmissible in the light of the corresponding epithet used in the fresh plates, and Fleet himself had since withdrawn his original opinion in his *Dynasties of the Kanarese Districts*, second edition, p. 334 Henceforth Kandara, Dāmōdaravarman, and Attivarman (Hastivarman) may be designated as 'kings of the family of Ānanda.'

The two localities mentioned in the subjoined inscription—Kandarapura (l 1) and Kan-gūra (l 4 f)—I am unable to identify But the first of the two villages referred to in the grant of Attivarman—Tānrikonra[8]—is probably identical with Tādikonda, 10 miles north of Guntūr[9] and south of the Krishnā river, and the second village—Āntukkūra[10]—with Gani-Ātukūru, west

---

[1] In line 13 the names of the *gōtras* are in Sanskrit

TRANSLATION

(Line 1) From Kandarapura, (the city) of victory, the villagers of Kangūra have to be addressed (as follows) by the word of the glorious Mahārāja Dāmōdaravarman, who meditates on the feet of the blessed Samyak-sambuddha; who belongs to the *gōtra* of Ānanda; (and) who is the origin of the production (i e. who has caused the performance) of many *Hiraṇya-garbhas*⁴ and of (gifts of) thousands of pregnant cows

(L 4.) 'For the sake of Our salvation as far as the seventh generation, the village of Kaṅgūra has been given by Us, with all exemptions, to the following Brāhmaṇas of various *gōtras* and *charaṇas*, and practising austerities and recital of their sacred texts Knowing this (the villagers) should render service (to them).'

(L 7) The allotment of shares is (now) made to these Brāhmaṇas, with specification of (their) *gōtras* and names First then, to the Kondinna Ruddajja (Rudrārya) 1 share; to the Kondinna Nandijja (Nandyārya) 1 share, to the Kondinna Khandajja (Skandārya) (1) share; to the Kondinna Bhavajja (Bhavārya) 1 share, to the Kondinna Aggijja (Agnyārya) 1 share; to the Kondinna Sirijja (Sryārya) (1) share, again to the Kondinna Bhavajja 1 share, to the Kondinna Khandajja 1 share, to the Kondinna Savarajja (Śabarārya) (1) share; to the Kondinna Aggijja 1 share, to the Kondinna Virajja (Virārya) 1 share, to the Kassava Dāmajja (Dāmārya) (1) share, to the Kassava Kumārajja (Kumārārya) 1 share, to the Kassava Venujja (Vishṇvārya) 1 share; to the Kassava Devajja (Dōvārya) (1) share, to the Kāśyapa Nandijja 1 share, to the Vatsa Doṇajja (Drōnārya) 1 share, to the Āgasti Bhaddajja (Bhadrārya) 1 share.

(L 14) (In) the year of victory 2, on the thirteenth (tithi) of the bright fortnight of Kārttika, (this) set of plates⁵ has been given (to the donees)

[Line 15 f contain two of the customary ślōkas]

No 19 —URLAM PLATES OF HASTIVARMAN, THE YEAR 80.

BY PROFESSOR E HULTZSCH, PH D , HALLE (SAALE)

This is a set of three copper-plates, measuring 7½ inches in breadth and 2½ inches in height The outer face of the first plate has been left blank, while the second and third plates

---

¹ अंशो १ is entered below the line.   ² Read भूमिस्°.

³ Read हत°

⁴ See the introductory remarks.

⁵ *paṭṭikā* is used in the same sense in other copper-plate grants See above, Vol. I, p. 7, text l. 51; Vol. VI, p 14 text l. 18 , p 88, text l. 28 , p 318, text l. 40 , Vol. VIII, p. 240, text l. 40,

tion of a Gāṅga grant in Vol XIII, p 216　As I have shown in Vol VII, p 107, note 4, *akhaśālī*, the person to whom the engraving of copper-plate grants is entrusted, means ' a goldsmith,'[1] and must not be confounded with *akshapatalika*, ' a keeper of records '

Of the localities mentioned in this inscription, Kaliṅganagara (l 1) is the present Mukhaliṅgam,[2] and Urāmalla, where the donee resided (l 12), is Urlām[3] where the copper-plates were obtained　In the absence of local maps, I am unable to identify the village granted, Hoṇḍevaka (l 8), and another village, Hattaravanna, which seems to be referred to in the description of the boundaries of the former (l 16)　The district of Krōshtuka-vartaṇī (l 8) occurs also in the Chicacole plates of Dēvēndravarman[4]

TRANSLATION.

(Line 1.) Om. Hail! From Kaliṅganagara, (the city) of victory. which is pleasant (on account of the simultaneous presence) of the comforts of all seasons, the glorious Mahārāja Hastivarman, a fervent worshipper of Maheśvara, who meditates on the feet of (his) mother and father, ...⁸ commands (as follows) the ryots, accompanied by all (others), at the village of Hondevaka in (the district of) Krōshtuka-vartanī.

(L 9.) 'Be it known to you that We have purchased two and a half ploughs (hala) of land in this village from the *Agrahārikas*,⁹ have constituted (this land a separate) section.

have made (it) an *agrahāra* which is to last as long as the moon and the sun, have exempted (it) from all taxes, and that, for the sake of the increase of the religious merit of (Our) mother and father and of Ourself, on the eighth (tithi) of the dark (fortnight) of Kārttika, with libations of water, We have given it to Jayaśarman, who resides at Urāmalla, belongs to the Vatsa *gōtra*, (and) studies the Vājasanēya (*śākhā*). Knowing this, nobody should cause obstruction to (the new owners) while they are preserving their own land.'[1]

(L 14) And the marks of the boundaries of this (land are) In the east, an anthill ; then the bank (*pāli*) of a field , then the western bank of the *Ghōshana* tank , and then again the bank of a field. In the south, only the boundary of Hattaravanna. In the west, the bank of a field , then an anthill ; then an artificial row of stones And in the north, the bank of a field , then an anthill ; again an anthill ; then (the boundary) reaches the anthill in the east.

(L 18) And future kings should preserve this meritorious gift. There are also the following (verses) sung by Vyāsa.

[Lines 19-22 contain three of the customary Slōkas]

(L 22) Eighty—(in figures) 80—years of the reign of increasing victory, the day 8 of Kārttika

(Verse 4) At the command of his (the king's) own mouth, this edict of Rājasimha has been written by Vinayachandra, son of Bhānuchandra

(V 5) (This is) an edict of the glorious Ranabhīta, whose orders are irresistible, (and) who has crushed the collection of (his) enemies by the strokes of the point of (his) scimitar.

No 20—IPUR PLATES OF GOVINDAVARMAN'S SON MADHAVAVARMAN.

BY PROFESSOR E HULTZSCH, PH D , HALLE (SAALE)

This is a set of three thin copper-plates in the possession of Brindavanam Gopalacharlu at the village of Īpūr in the Tenāli Tāluk of the Guṇṭūr District, which was brought to the notice of Rao Bahadur H Krishna Sastri by Mr A Rangasvami Sarasvati The plates measure 6¾ inches in breadth and 1¾ inches in height The outer faces of the first and last plates have been left blank, while the middle one bears writing on both sides The margins of the plates are not raised into rims, but the writing is in good preservation The plates are strung on a copper ring, which is 3" in diameter and is passed through a hole on the left side of the writing The two ends of the ring are secured in the base of a circular seal, which measures 1¼" in diameter and is somewhat worn. It is divided by a cross-line into two sections The lower section bears, in relief, the legend श्रीमाधववर्मं in two lines. Above the line seems to be a figure of Lakshmī or a Svastika on a pedestal, flanked by two lamp-stands and surmounted by the sun (?) and the crescent of the moon The weight of the plates, with ring and seal, is 30 tolas

The alphabet is of an earlier southern type than that of the two other published grants of the Vishnukundin family[2] The secondary forms of *i* and *i* are not always clearly distin-

---

[1] Cf the corresponding portion of the Achyutapuram plates, above, Vol. III, p 129
[2] These are the Parvatipuram plates of Indravarman, above, Vol. XII, p. 133, and the Chikkulla plate Vikramendravarman II, Vol IV, p 133
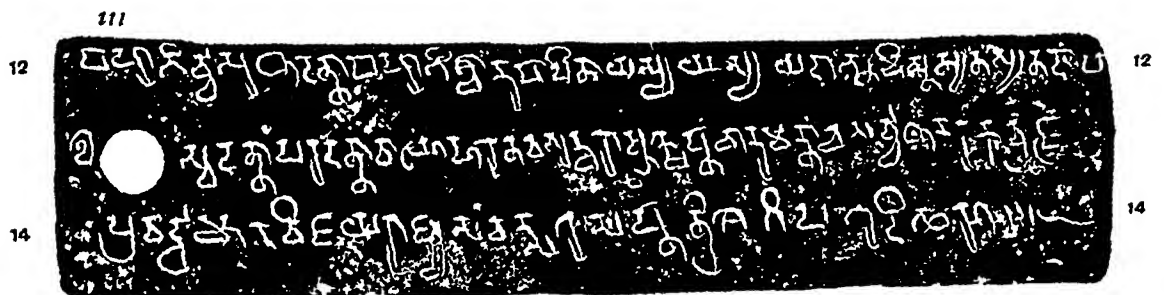

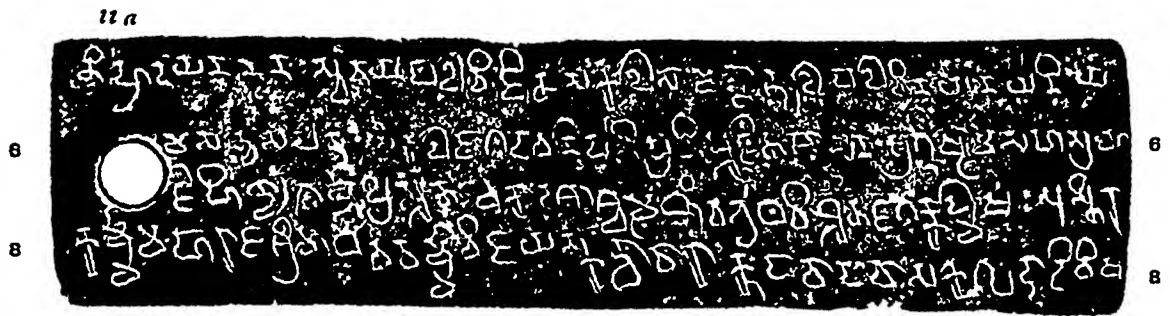

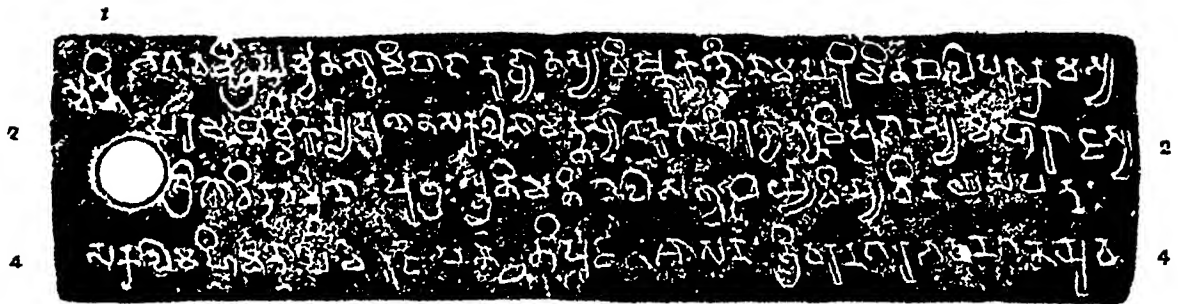

Seal
FULL SIZE

guished, in °*hundinām=* (l. 1) *i* looks like *ī*, and in *bhagavach-Chhrīparvvata-* (l. 1), *śrī-Govinda°* (l. 3), and *-mahī-* (l. 4), *ī* looks like *i*, *t* is distinguished from *n* by a loop on the left but in *-janīn=* (l. 9) the second *n* has a loop, and in *-jagat-kalmashah* (l. 7) and *-samvatsarē* (l. 14) the *t* has no loop. Final forms of *m* and *t* occur in *-arītham* (l. 10), *vasundharām* and *vrajēt* (l. 13) The numerical symbols 5, 7, and 10 are used in the date (l. 14)

The language is Sanskrit prose (with two verses quoted in l. 12 f), but the abbreviation *gi* (l. 14) presupposes the Prākrit word *gimha* (= *grīshma* in Sansk. t) The incorrect form *saptātrisē*, (for *saptatrimśē*, l. 14) seems also to be due to Prākrit influence Palatal *ñ* is expressed by lingual *n* in *Manchyanna-* (l. 11) Consonants are doubled after *r* throughout, and *dh* before *y* in *-ānuddhyātasya* (l. 1), while *tva* represents *tta* in *-satva-* (ll. 3, 6) As the notes on the text will show, the rules of *sandhi* are frequently disregarded

The inscription records the grant of the village of Vilembali in the Guddādi-vishaya (l. 8 f) to the Brāhmana Agniśarman. The grantor was the Mahārāja Mādhavavarman (l. 8), son of the Mahārāja Govindavarman (l. 3), who was a worshipper of the temple at Śrīparvati and belonged to the family of the Vishnukundins (l. 1) Mādhavavarman issued his order to the villagers from his camp at Kudāvāda (l. 8) and seems to have resided at Trivaranagara (l. 4) The executor (*ājñā*) of the grant was (the king's) ' dear son,' Mañchyanna-bhattāraka (l. 11) Its date was the 15th day of the 7th fortnight of the hot season in the thirty-seventh year of the reign (l. 14)

In consideration of the comparatively early type of the alphabet of this inscription, I feel tempted to identify Mādhavavarman with a king of the same name, who is known to have been the grandfather of the grantor of the Rāmatīrtham plates, and the great-grandfather of the grantor of the Chikkulla plates [1] For easy reference, I subjoin a tabular statement

Ipūr plates	*Rāmatīrtham plates.*	*Chikkulla plates*
Govindavarman		
|		
Mādhavavarman (year 37)	Mādhavavarman	Mādhavavarman
	|	|
	Vikramēndra	Vikramēndravarman I
	|	|
	Indravarman (year 27)	Indrabhattārakavarman
		|
		Vikramēndravarman II (year 10)

Of the localities mentioned in this inscription, Śrīparvata (l. 1) is perhaps identical with Śrīśailam in the Karnūl District [2] Whether the Guddādi-vishaya (l. 8 f) has anything to do with the Guddavādi-vishaya to which Drākshārāma and Chellūr in the Godāvari District belonged,[3] I am unable to say, nor can I identify Vilembali (l. 9), Kudavāda (l. 8), and Trivaranagara (l. 4), which can hardly be identical with the distant Tripuri (Tewar)

TRANSLATION.

(Line 1) Hail! The son of the glorious Mahārāja Govindavarman, who meditated on the feet of the holy lord of Śrīparvata; (who belonged to the family) of the Vishnukundins; whose power and valour were immeasurable, who was most religious, to whom all vassals were bowing, (and) who (performed) many gifts of cows, gold, and land;

(L 3) the glorious Mahārāja Mādhavavarman, who is endowed with (knowledge of) the law, intelligence, power, honesty, firmness, valour, and modesty, whose edicts are worshipped by all rulers of men on the circle of the earth, who delights the hearts of the young women standing on (the top of) the palaces of Trivaranagara; who has subdued all vassals by the power of his own arm, who is endowed with unequalled power, modesty, policy, self-restraint, and honesty, whose edicts are worshipped by the rulers of the earth in the whole world[3], who has performed thousands of *Agnishtoma* sacrifices, who is a producer of (1 e who has performed *Hiranyagarbhas*[4], who has removed the stains of the world by bathing at the end of eleven *Aśvamēdhas*[5], (and) whose religious rites are everlasting,

(L 8) from (his) camp of victory, pitched at Kudāvāda, commands as follows all men at the village of Vilembali in the district (*vishaya*) of Guddādi.

(L 9) 'For the sake of the prosperity of Our family, I have given (this village), with all exemptions, to this[6] Brāhmana Agniśarman of the Vatsa *gōtra*. Knowing this, all royal officers should exempt and preserve it'

(L 11) The executor (*ājñā*) of this (grant was the king's) dear son, Mañchyanna-bhattāraka.

[Line 12 f contain two of the customary Ślōkas]

(L 14) In the thirty-seventh year of the reign of increasing victory, the 15th day of the 7th fortnight of the hot season.[7]

No 21.—IPUR PLATES OF MADHAVAVARMAN II.

By Professor E Hultzsch, Ph D, Halle (Saale)

This is another set of three thin copper-plates without rims, which belongs to the same owner as the preceding one (above, No 20) The plates measure 7 inches in breadth and 1½ inch in height and have four inscribed faces, the outer sides of the first and last plates having been left blank. The writing is much injured, especially on the two last faces. The plates are strung on a ring, which is about 3" in diameter, and the ends of which are secured in the base of

---

¹ Read नरक   ² Read समनिमे

³ The two last epithets are nearly identical with two others applied to the king before in line 3 f.

⁴ *Hiranyagarbha* is the name of the fifth of the sixteen *Mahādānas* Cf *anēka-Hiranyagarbbh-ōdbhav-ōdbhavasya* in the Mattepād plates of Dāmōdaravarman (above, No 18), text 1 2 f, and *apramēya-Hiranyagarbha-prasavēna* in the Goranṭla plates of Attivarman *Ind Ant*, Vol IX, p 102, text 1 3

⁵ The same epithet occurs (with the various reading *avadhauta* for *vidhūta*) in the Rāmatīrtham plates, l. 3 f., and in the Chikkulla plates, 1 2 f

⁶ Cf above, Vol IX, p 59, note 6.

⁷ With *gi pa 7* cf. *gimhā pakho chhaṭho 6* in the Mayidavōlu plates (above, Vol VI, p 88); [*g*]*imha-pakhe pachame 5* at Kārlē (Vol VII, p 61), the following dates of four Nāsik inscriptions (above, Vol VIII) *gimha-pakhe pachame 5* (p, 59), *gimhāna pakhe bitiye 2* (p 60), *gi pa 2* (p 65); *mha-pakhe chothe 4* (p. 88) and *gihma pakkam pidamam* in a Malavalli inscription (Vol X, Appendix, p 189, No 1195).

a circular, much worn seal, which is turned towards one side   The seal is divided by a cross-line into two sections   In the lower section the legend श्रीमाघव[र्म्म], in two lines, is very faintly visible, while the symbols in the upper section cannot be made out   The weight of the plates, with ring and seal, is 30 tolas

The alphabet reminds us of that of the British Museum plates of Chārudēvī (above, Vol. VIII, p 143)   The *Upadhmānīya* occurs in lines 12 and 16   The numerical symbols 7 (thrice) and [40] are used in the date (l 13)

The language is Sanskrit prose (with two verses quoted in ll 14-16), but the abbreviation *vā* (l 13) presupposes the Prākrit form *tāsa* (=*tarsha* in Sanskrit)   Consonants are doubled after *r* throughout, *t* before *r* in *kshattriyā°* (l 3 f) and -*putthas*= (l 5), and *ah* before *y* in °*ddhyātō* (l 7),[1] while *tva* is employed for *tha* in -*satta*- (l 6)

The inscription records the grant of a village, the name of which is doubtful, by Mādhava-varman (II) (l 7), who resided at [Ama]rapura (l 1), ruled over the Trikūṭa and Malaya mountains (l 5), was a worshipper of the temple at Śrīparvata (l 6 f), and belonged to the family of the Vishṇukundins (ll 7, 13)   His father was Dēvavarman (l 5), and his grand-father the Mahārāja Mādhavavarman (I) (l 3 f)   As the alphabet of this inscription seems to be of an earlier type than that of the preceding one, and as grandsons are frequently named after their grandfather, I consider it not impossible that Mādhavavarman II was the grandfather of Gōvindavarman's son Mādhavavarman,[2] who would then have to be designated Mādhavavarman III.   The first figure of the year in the date portion of the subjoined inscription (l 13) is injured and uncertain

The localities mentioned in this inscription I am unable to identify, with the exception of Trikūṭa, a mountain on the Bombay side,[3] and Malaya, i e the Western Ghāts, both of which were at a safe distance from the dominions of Mādhavavarman II, although he professes to have ruled over them   For Śrīparvata=Śrīśailam see above, Vol IV, p 195

No 22—REVISED TEXT AND TRANSLATION OF TWO OF THE KURAM PLATES.

By Professor E Hultzsch, Ph D, Halle

Some time after I had published the Kūram copper-plates of the Pallava king Paramē-śvaravarman I,[1] the late Professor Kielhorn recognised that plates III and IV of that inscription in which I had noticed only two verses are all in poetry I now reprint the very corrupt text of this portion of the inscription (ll 19-19), arranging it in verse lines, correcting the writer's mistakes as far as I am able to do this, in notes and adding a fresh translation Rao Bahadur Krishna Sastri was good enough to contribute to this article a few additional conjectures, viz. °चुदसि, verse 12 चुद्मटे or उत्तमटे, v 14 चगमसर°, v 15, रतवान्, v 21, मट, v 23.

The subjoined passage consists of 22 verses (5-26). The relative pronouns in verses 5 6 21, and 26 refer to the name of the donor Paramēśvaravarmmā, l 19) at the end of the preceding prose passage. Verses 8-21 form one long relative sentence, describing the king's victory over the Chalukya king Vikramāditya I Verses 22-26 praise Paramēśvaravarman's state-elephant Arivārana, his charger Atisaya, his dagger, and his girdle

TRANSLATION.[1]

Mahēndravarman's . . . . . son (was) . . . . . Paramēśvaravarman,

(Verse 5.) who was a subduer of all (enemies), just as Bharata (bore the surname) Sarvadamana[2], who avoided improper conduct (asamañjasa), just as Sagara banished (his son) Asamañjasa[3], who possessed a strong body (anga), just as Karṇa (was the king) of the rich Angas, who was fond of poems (kāvya), just as Yayāti was fond of (his father-in-law) Kāvya (Uśanas);

(Verse 6) whose command always becomes a chaplet on the heads of (i e is received with respect by) independent kings, (but) also confers splendour on the faces of (i e fills with joy) (his) friends by reaching (their) ears, [just as an ear-ring (karṇapūra) becomes an ornament to the face],

(Verse 7) (who) is clever in the sport of fine arts (kalā) (and) constantly passionate in ove,[4] and who avoids vice (mukt-āguna) in (his) heart, (but) also (becomes) a pearl-necklace (muktā-guna) on the breast of (his) wives,

(Verse 21.) who put to flight Vikramāditya,—whose army (had consisted) of several lakhs, (but who was left) quite alone (and) covered only by a rag,—at the head of a battle,

(Verse 8) in which the disk of the sun was made to assume the likeness of the circle of the moon through the mist of dust produced by the stamping of countless troops of men, horses, and elephants,

(Verse 9) which inspired terror through the thunderlike sound of kettle-drums; in which unsheathed swords (reminded of) the curves of flashes of lightning, in which elephants were advancing like clouds, (and which therefore) resembled an unseasonable breaking of the monsoon,

(Verse 10) in which tall steeds (looked like) high waves, in which elephants tore up the ground on their path, just as sea monsters produce whirlpools in diving up, in which conches were incessantly blown (or cast up), (and which therefore) resembled the gaping ocean,

(Verse 11) which contained curved swords and shields (āvarana), (resembling) rhinoceroses, creepers, and varana (trees), which teemed with heroes holding bows and (riding) mighty elephants, (as if it were) covered with śara (grass) and with asana, nāga, tilaka, and punnāga (trees), in which confused noises were raised; (and which therefore) resembled a forest agitated by a violent wind,

(Verse 12) in which bows were bent by warriors, in which the air was obstructed by arrows flying past each other, in which javelins, pikes, darts, clubs, lances, spears, and discuses were flying about,

(Verse 13) in which troops of mast elephants firmly impaled each other's faces with the thunderbolts of their tusks, in which squadrons of horsemen were connected by their swords that had struck each other's heads,

---

[1] To make the construction clear, I had to place verse 21 before verse 8

[2] Cf Mahābhārata, I, 74, 8, VII, 68, 7, and Śakuntalā, ed. by Cappeller, p 93, l 2, p 95. l. 24; p. 97, l. 8; p 102, l. 21

[3] In the epic poems he is called Asamañja or Asamañjas.

[4] The poet seems to hint a comparison of the king to the moon, who is 'charming in the splendour of his digits (kalā),' and to Śiva, who 'was angry with the god of love.'

(Verse 14.) in which soldiers were engaged in fighting with sword against sword, pulling of hair against pulling of hair, and club against club; . . . . . considering each other as equal (or) despising (each other),

(Verse 15.) in which the ground (seemed to be) thickly smeared with saffron, as the blood (of the wounded) was mixed with the musk (anointing their bodies), in which (both) large armies had lost and dropped arms, necks, shanks, thigh-bones, and teeth,

(Verse 16) in which, during the encounter, both parties were broken, urged on, put to flight, and stretched on the ground, which was witnessed by the goddess of fortune sitting on the swing of doubt about mutual victory and defeat;

(Verse 17.) in which brave warriors were marching on the back of lines of fallen elephants forming a bridge over the flood of blood; in which soldiers stood rendered motionless, as their blows did not hit each other's weak parts;

(Verse 18 f) which was covered here and there with elephants which had fallen (simul-taneously with shattered banners and parasols), and whose respirations waved the mass of chowries and with dead (or) half-dead warriors who had done their duty, whose strong arms (still) raised the weapon, whose lips were bitten, and whose eyes were deep-red with fury, in which tiaras, armlets, necklaces, bracelets, and ear-rings were broken, crushed, and pulverized,

(Verse 20) in which Kūshmāndas, Rākshasas, and Piśāchas were singing aloud, as they were intoxicated by drinking the liquor of blood, (and) which contained hundreds of headless trunks dancing together in a fearful manner and beating the time (with their hands)

(Verse 22) Having caused to be accoutred the elephant named Arivārana,—whose golden howdah was studded with the splendour of jewels, the flow of whose rut was incessant, (and who therefore) resembled the king of mountains (Himālaya) himself, whose torrents never cease to flow,—followed by thousands of (other) elephants,

(Verse 23) also the excellent horse named Atiśaya,—who displayed the majestic stepping of the horse of the lord of gods (Indra); who manifested his noble breed by his active jump-ing; (and) who bore a saddle (set with) jewels,—accompanied by lakhs of (other) horses whose ears were surmounted by chowries;

(Verse 24) (and having put on) an unique and unequalled curved dagger (set with) jewels, which was fit for the fatigue of battle, attached to a string of matchless big stones, (and) ornamented by being inlaid with rubies and emeralds;

(Verse 25.) (and) a valuable, priceless, famous girdle (which was strung) on a soft string, which emitted the splendour of gems, and the ruby at the end of which (resembled) the bright sun;

(Verse 26) he (viz Parameśvaravarman) who had destroyed his enemies, inspiring with fear [and despair] the minds of princes, (and spreading) the flower-garland of (his) fame in all regions, carried all these (ornaments)[1] on (his) body that was highly adorned with heroic deeds, —along with the powerful goddess of fortune clinging (to him)

---

[1] This seems to refer to verse 24r.

No 23—DHANAIDAHA COPPER-PLATE INSCRIPTION OF THE TIME OF KUMARAGUPTA I THE YEAR 113

By RADHAGOVINDA BASAK, M A, CALCUTTA.

This inscription, engraved on a thin copper-plate which now looks very much worn out and fragile was discovered about a decade and a half ago in a village called Dhanaidaha in the Natore Sub-division of the Rajshahi District in the Rajshahi Division of the Bengal Presidency. Babu Akshaya Kumara Maitraya, B L, Director of the Varendra Research Society of Rajshahi, obtained it from Maulvi Muhammad Ershed Ali Khan Choudhuri (now Khan Bahadur), and it is now deposited in the Museum of the Society along with the five copper-plate inscriptions[1] of the Gupta period recently discovered at Damodarpur in the District of Dinajpur. It was edited in 1909 by Mr R D. Banerji, then of the Calcutta Museum, in the *Journal of the Asiatic Society of Bengal* (Vol V, No 11, pp 159-61) Mr Banerji's decipherment of the inscription was not correct, and the text as prepared by him contained some mistakes. Mr Vincent Smith in his *Early History of India* (3rd Edition) has referred to this epigraph by the name of the Natore inscription in a foot-note at page 327, but he could not make out any material for the history of the period, probably because Mr Banerji's reading was unsatisfactory and because of his remarks that "the wording of the record is rather difficult to interpret," and that "no continued translation is possible of the text" While editing two of the Damodarpur inscriptions belonging to the same monarch's reign, I had to revise the reading of this inscription, and I re-edited it in the Bengali monthly, the *Sahitya* of Calcutta, in the Pausha issue, 1323 B S I now record the results of my decipherment in this Journal for the scrutiny of scholars Some of the chief mistakes in Mr Banerji's reading will be pointed out below in the foot-notes Other differences in our readings may be left to be found out by those of our readers who may care to do so

The inscription is a fragmentary one, consisting of 17 lines of writing incised in the early Gupta characters of the 5th century A D It is written on one side only of the plate, which is now very much corroded In length the full plate seems to have been almost twice the fragment now preserved, which measures 5¼"×5¼" Almost the whole of the proper right half of the plate is broken and lost together with the upper right and lower left corners From an examination of the portions of the writing preserved in lines 14-16, which form parts of the well-known imprecatory verses, it can be ascertained that about a dozen and a half letters are cut off from the proper right side of each of the lines This loss of almost half of the inscribed portion and the extremely blurred state of the letters preserved are the greatest obstacles in explaining the document But the five newly discovered Damodarpur copper-plates and the four Faridpur grants[2] have helped us much in deciding that the present plate also, like them, is not an ordinary royal land-grant, but is a sale-deed embodying the record of a purchase of land for the purpose of donation Mr Banerji states that the fragments of the proper upper right corner, which was broken in the exhibition grounds of the Calcutta Industrial Exhibition of 1906-7, contained the two letters *ma* and *ra*, which, he thinks, were evidently the second and third syllables of the name of the emperor Kumara-gupta The inscription is dated in 113, which must be referred to the Gupta era, and this evidently proves that it belonged to the time of the Gupta

---

monarch Kumāra-gupta I　The language of the inscription is Sanskrit, and it is in prose throughout excepting in lines 14-16, which contain the three imprecatory verses　Mr Banerji's statement that "the bad state of preservation makes it very difficult to make any remarks on the orthography" cannot be upheld, for, the following points in respect of orthography may easily be observed :—

(1) as in the Dāmōdarpur copper-plates, the sign of the medial ā is attached by a hook-sign towards the bottom of the lower right of some of the letters, especially of kha, ga and na, e g khāsaka 1 5, Khādā(tā ?)pāra- 1 7, grām-āshṭa- 1 6, and guṇ-āguṇa- 1 13,

(2) the sign of dvagraha is not used, as in -vishayē=nivritta- l. 7;

(3) the letters ga, na, ta, ma, ya and va (and not sha, e g varsha- 1 15) are doubled with a preceding r, e g. vargga- 1 4, svarggē l. 15, utkīrnnaṁ 1 17, kīrtti 1 4, -śarmma ll 3 and 5, dharmma 1 8, -maryyādā- 1 7, and -pūrvva ll 2 and 16, sarvra l. 9,

(4) m has sometimes been joined with following pa and va, e g in svadattām-para-dattām=vā 1 14, and

(5) ka has been doubled with a following r, e.g in kkramēna(na) 1 8

The form of the initial vowels ā, i and u are seen in the following words respectively, āyuktaka 1 11, iha 1. 7, and utkīrnnaṁ l. 17.　The form of the letter mē in kkramēna(na) 1 8, sarvvam=ēva 1. 9, Stha(Sta)mbhēśvara l. 17, and -kulyavāpam=ēkaṁ 1 11, is to be noticed.　For a similar incision of mē, especially the ē mark in it, we may compare the words kāryam=ēshāṁ 1. 31 in Fleet's, C. I. I Vol III, No 1 and guhām=ētām 1 5 (ibid, No 6), and the word dōsha-grāmō 1 1 (wrongly read as dās-āgrēna by Mm H P Śāstri and Mr R. D. Banerji) of the Susunia Rock Inscription (above, Vol XIII, p 133)　In my paper on "The Five Damodarpur copper-plate inscriptions of the Gupta period," published in this Journal (vide Vol XV, Part III), I made a remark at the outset that those sale-deeds, which our present inscription resembles, "may be regarded as having roughly six different parts in the form in which they are drawn up"　The same remark holds good with regard to this inscription also　the first part ends with the word vijñāpitā 1 7, the second with dā[tum] 1 8, the third with tad=aradhritam=iti yatas 1 10, the fourth with ēkaṁ dattaṁ 1 11, the fifth with -Varāha-svāminō dattaṁ 1. 12, and the sixth with the rest of the grant

The contents of the inscription may be stated as follows :—In the year 113 G E (=432-33 A D), belonging evidently to the reign of Kumāra-gupta I, some one (very likely a royal officer, an āyuktaka) whose name seems to have ended in -vishnu (1 7) approached the village house-holders, the mahattaras and the ashta-kul-ādhikaranas and perhaps also the local government of the district and expressed to them his desire to purchase one kulyavāpa of cultivated land by paying the price at the usual rate prevalent in the vishaya of Khādā(tā ?)pāra　It seems that the applicant wanted to buy the land by destroying the nīvi dharma (the non-transferability of it), i e with the right of alienation　His prayer was granted and the purchased land was severed for him by proper measurement　He in turn seems to have made a donation of the same to a Sāmavēdin Brāhmaṇa (chhandōga 1 12) of the name of Varāha-svāmin　It seems very probable, though the mutilated condition of the plate does not permit us to be very confident on the point, that the Dhanāidaha plate contained a reference to the Puṇḍravardhana bhukti being under a governor appointed by the Gupta ruler (compare the Dāmōdarpur plates of the years 124 and 128 G E , belonging to the same monarch's reign) and that the vishaya of Khādā(tā ?)pāra was, like Kōtivarsha, one of the many districts of the same bhukti.　In the Khālimpur copper-plate[1] of Dharmapāla, King of Gauda, though of the 9th century A D., we have the names of two other vishayas, viz. Mahāntāprakāśa (1. 31) and Sthālikkata (1. 41), as being situated in the bhukti of Puṇḍravardhana

Dhanaidaha Copper-plate of the time of Kumāragupta I   the year 113

TRANSLATION.

In the year one hundred exceeded by thirteen . . . . . . on this day (as above specified), [during the reign of] *parama-daivata parama-bhaṭṭāraka*, etc Kumāra-gupta . . . . . the ryots (of the village) . . . . . . the Brāhmaṇas Śiva-śarman, Nāgaśarman and the *Mahattaras*[2] [Dē?]vakīrtti, Kshēmadatta, Gōshthaka, Varggapāla, Piṅgala, Sunkuka, Kāla . . . . . , -vishṇu, Dēvaśarman, Vishṇubhadra, Khāsaka, Rāmaka Gōpāla,   . . su (?) Śrībhadra, Sōmapāla, Rāma and others, and the officer[3] in charge of eight *kulas* in the village were informed by (some officer whose name appears to have the ending Vishṇu l. 7) as follows —

" In this *vishaya* of Khāḍā(tā ?)pāra the established custom (regarding the sale of culti-vated land) prevalent . . . . . . to be had (at . . . . . such rate) by the nullification of the custom of permanent endowment[4] (*nīvī-dharma*) So deign to make a gift (of land) this day according to this method . . . . by the neighbouring house-holders who are obedient and who are (thus) addressed establishing   . . . . ."

Whereas it was so determined, and whereas this determination was accepted by the state-ment "be it so"—one *kulyavāpa*[5] of cultivated land was given to him, with its area severed[6] by the measurement of 8 × 9 reeds.

Then the same land was given to the *Chhandōga*[7] (Sāmavedin) Brāhmaṇa Varāha-svāmin, an inhabitant of the *kataka*[8] of . . . . , by this official[9] (*āyuktaka*)

So, considering the merit and demerit respectively of making a gift and confiscating (it), and (the unstability) of body and gold, (this gift is to be preserved) To the same effect has been stated thus by Bhagavān Dvaipāyana (Vyāsa) —

(1) Whoever confiscates land given by himself or by another becomes a worm in ordure and rots with his forefathers.

(2) Land has been given by many kings, such as Sagara and others the reward (of these grants) belongs to whosoever at any time possesses the earth.

(3) O Yudhishṭhira, best of land-lords, preserve with care land already given to the twice-born (Brāhmaṇas); for, the preservation of land-grants is more meritorious than the making of a grant. Engraved by su (?) Śrībhadra and (written) by Stambhēśvaradāsa.

---

[1] Mr Bane-ji reads the name as *Sthalnēśvara*

[2] *Vide* my note on this word in Plate No 4 of the Dāmōdarpur collection, above, Vol. XV, p. 137.

[3] *Vide* my note on this word, *ibid*, p 137 Mr Banerji's explanation of this term as " a local officer (*kulādhikaraṇa*) who exercised authority over eight villages" does not seem to be correct. He was rather an officer in the village having supervising authority over eight *kulas* (for the technical meaning of which see Kullūka's commentary on *Manu*, VII, 119)

[4] *Vide* my note on the term *nīvī* in Plate No 1 of the Dāmōdarpur collection, above, Vol. XV, p. 131, n. 8, and *Indian Antiquary*, 1919, p 14.

[5] *Vide* my note on this word on p 132, above, Vol. XV.

[6] The word *apaviñchhya* occurs in the Paṇḍpur grants (*Indian Antiquary*, 1910) and in Dāmōdarpur plate No. 3, l. 10, p 138, above, Vol. XV.

[7] *Chhandōga* means one studying the Sāmavēda. For the use of this term *vide Manu*, III, 145, and the Baṛukhēra Plate of Harsha, above, Vol. IV, p 211.

[8] *Kataka* may either mean a camp or the capital.

[9] *Vide* my note on the same in Plate No. 4 of the Dāmōdarpur collection, p. 140, above, Vol. XV.

No 24.—SOME IMAGE INSCRIPTIONS FROM EAST BENGAL.

By Nalinikanta Bhattasali, M A , Curator, Dacca Museum

The short votive inscriptions recorded on the pedestals of images are often very useful to the antiquarian in more ways than one   They not only illumine the darkness of the past like flash-lights by furnishing pointed and concise historical information, but the help that they give in determining the periods of sculptural history is by no means inconsiderable   Students of iconography too have reason to welcome them, since many votive inscriptions contain the names of the images on whose pedestals they are inscribed, helping thus to identify them easily. Below I edit six such votive inscriptions from East Bengal, in some of which all the three characteristics noted above will be found to exist to the fullest degree

1. THE BHĀRELLĀ NARTTĒŚVARA IMAGE INSCRIPTION

The worship of images of Natēśa-Śiva (the dancing Śiva) seems to have been a peculiarity of Southern India   Such images in metal abound in Southern India and Ceylon; but they are very rarely met with in the North-Indian Provinces   How Bengal came to share this peculiarity with the Deccan is one of the unsolved problems of history   We must, however, note here that north and west Bengal do not show this peculiarity, and it is only in the south-eastern districts, roughly comprising the ancient divisions of Vanga and Samatata, that images of the dancing Śiva were discovered.   The Dacca Museum has three excellent specimens, while a rather ill-preserved one is to be found in the Rājshāhi Museum [1]   I know of two other very well preserved Natēśa images, which are being worshipped in two villages in the Dacca and Tippera districts of East Bengal

The discovery of so many images of the same class in a rather limited area cannot be accidental, and it is quite possible that their worship was introduced by some Śaiva ruling family. The Sēna kings, whose origin some trace to the Deccan, had their metropolis in Vikramapura in the Dacca district, in the heart of the ancient Vanga, as is attested by the majority of their copper-plates, and they were renowned Śaivas   It is very probable that the worship of Natēśa-Śiva came from Southern India with the Sēnas   It is worth noting that out of the seven images so far discovered and known to me, five came from Vikramapura, and a village situated in the suburbs of the capital of the Sēnas in Vikramapura (a pargana in the Dacca district) contains the ruins of a big temple and is still called Nātēśvara   The present image, however appears to be earlier than the Sēnas

The inscription here edited was found on the pedestal of a huge image of Natēśa-Śiva dug out of a tank in a village called Bhārellā, Police Station Badkāmtā, in the district of Tippera. It was brought to my notice in 1911, and in 1912 I went to Bhārellā too late to save the image, which was broken to pieces by a fanatic Fakir, but I procured the inscribed pedestal for the Dacca Sāhitya Parishat, where it is at present preserved.   A large fragment of the figure of the god is now in the Dacca Museum   I edit the inscription from the original

The inscription is in two lines in four sections on four planed faces of the pedestal, below the lotus-seat of the god   The whole inscribed surface measures in length about 14″, and the letters are approximately ¼ long   The first section has suffered a little by the peeling of the stone, while the beginning of the third and the longest section has been altogether chopped off, damaging altogether 12 or 13 letters of each line   The first line runs connectedly to the end of

---

[1] The image was found in the village of Kalikāl under Police Station Lauhajang in the Dacca district.   So it must not be taken as an instance of a find in north Bengal.

the third section and then returns to the first section to begin the second line   The name of the sculptor is given in the fourth section in two lines

The characters used are the ordinary north-eastern characters which gave birth to the modern Bengali script, and which even at this stage show distinct resemblance to the modern script of Bengal   Paleographical considerations would lead us to assign the latter half of the 10th century as the time when this inscription was incised   The date is missing , but it may be that the lost portion of the second line in the beginning of the third section contained a date. There are some data from which a date perhaps is obtainable by mathematical calculation. The image was consecrated on a Thursday, under the star Pushya, on the fourteenth day of the dark half of the month, the day being the 14th of Āshādha counted by the movement of the moon   It would be a very interesting calculation to lovers of astronomical problems to find out in which year or years between 900-1100 A D all these data met   I myself do not possess the necessary equipment for the calculation   Dewan Bahadur L D Swamikannu Pillai who was consulted by Mr. Krishna Sastri on my behalf kindly writes :—

"Between 900 A D and 1000 A D there are three dates which agree perfectly, viz A.D 912, 939 and 983   I have marked these with an asterisk in the accompanying list which shows also dates of less perfect agreement. There must be an equal number between A D. 1000 and A D 1100   We cannot tell which of these dates is meant

Thursday Ashadha, ba 14 Pushya
A.D 905 Th 4 July ; .32 , n f d 75
A D 912 Th 16 July , .09 , 63 *
A D 925 Th 21 July , f d t 52 , f d. n 68
A D 932 Th 5 July ; 52 , f d n. 90,
A D 939 Th 18 July , 41 , .86 *
A D 942 Th 14 July , f d. t 12 , f d n 89.
A D 966 Th 19 July , .71 , f d n 09
A D 969 Th 15 July , f d. t 21 ; f d. n 90.
A.D 983 Th 12 July , 03 , 94 *
A.D 993 Th 20 July , f. d. t .01 , f d. n .30 "

He adds "14th tithi means nothing more or less than 14th day by the movement of the moon. A solar month date would be different, but in a lunar month the days and tithis are the same in the Indian Calendar .In the Muhammadan, Jewish and Greek Calendars there may be a slight difference "

The inscription refers itself to the 18th year of the reign of a king Layaha-Chandra by name   Kings with the surname Chandra are found on the thrones of two adjacent countries, viz Vanga and Arakan   The Chandra kings of Vanga, who, like the Sena and the Varman kings, had their capital in Vikramapura, are known from two copper-plates[1] But no name in their geneology resembles Layaha-Chandra, which sounds indeed rather outlandish. We find an account of the Chandra kings of Arakan in Phayre's *History of Burma*, p 45, and *Numismata Orientalia*, Vol II, Pt I, p. 42, by the same author, where we learn that the dynasty came to an end in 957 A.D. We know of another isolated Chandra king of Vanga, Govinda-Chandra by name, from Rājēndra-Chōla's inscription[2] Layaha-Chandra-dēva must have belonged to one of these three lines   If Layaha-Chandra was of the Arakan line, 939 A. D may be taken as the date of this inscription

[1] *Ep Ind.*, Vol XII, p 136 and *Dacca Review*, Vol II, p 250   Recently a third plate of Śrī-Chandra-dēva was found and edited by me in the *Dacca Review* for May and June 1919, 17 XII. 1919.
Ep Ind, Vol. IX, pp. 232-233.

Ballads, at one time very widely popular are current about a king called Gōvinda-Chandra throughout Bengal One was published by Grierson in J. A. S B, 1873 Another was published by Babu Sib Chandra Sil from Chinsura near Calcutta I published a version by a poet called Bhabānidās, edited from two manuscripts of the song procured from the Tippera district All these versions say that Gōvinda Chandra was the daughter's son of Tilak Chandra king of Mēhārkul which is still a *pargana* of the Tippera district Gōvinda Chandra of Rājēndra-Chōla's inscription and the Gōvinda-Chandra of the ballads appear to have been the same person, and Layaha may have been the name of the father of Tilak Chandra

Kusuma-dēva, whose son Bhāvu-dēva consecrated the image of Narttēśvara, seems to have been a vassal prince under the suzerainty of Layaha-Chandra, ruling over Karmmānta, which I am inclined to identify with modern Baḍkāmtā (the senior Kāmtā), some three miles south-west of the find-place of the image Baḍkāmtā is still a place of considerable importance, being a police station with a big Zemindary kachery, situated within a spacious area surrounded by an ancient moat and containing two big tanks, in the smaller of which many ancient stone images of Brahmanical deities were found Stone images, both Buddhist and Brahmanical, abound in the villages surrounding Baḍkāmtā, and testify to the former prosperity of the tract. The area surrounded by the moat probably indicates the site of the palace The appellation *Dēva* at the end of the names of Kusuma-dēva and Bhāvu-dēva is also in favour of supporting their claims to royal dignity My friend Prof Rādhāgōvinda Bāsak, M A, however, is in favour of taking the word Karmmānta to mean 'a store of grain,' and degrading Kusuma-dēva to the rank of an officer in charge of the royal granary We know that the two plates of Dēva Khadga published by the late Gangamohan Laskar in the Memoirs, A. S B, Vol I, were issued from Jaya-Karmmānta, I have elsewhere tried to show that Karmmānta the capital of the Khadgas and the Karmmānta of the present inscription are identical, and is the present Baḍkāmtā (J A. S B., July 1914)

The language of the inscription is Sanskrit prose throughout As to orthography, we may note the doubling of consonants after *r* as in *karmmānta* (1 1), *sarvvākshara* (1 2), etc, but *chaturdaśyām* (1 1) is spelt with one *d*

Numeral figures for 1 and 4 are used in designating the 14th day of Āshaḍha

The letters of the inscription are mentioned to have been engraved by one Ratōka, but Madhusūdana seems to have been the sculptor who made the image,

¹ Expressed by a symbol, see below, p 352,
² Read बृहस्पति.

N B—It is customary to read the auspicious symbol ⟨symbol⟩ or ⟨symbol⟩ in the beginning of an inscription as श्री and this interpretation has been adopted by eminent epigraphists like Hoernle and Fleet   Hoernle writes thus (Intro *Bower Manuscripts, Indian Antiquary* reprint p 22) — " Indian manuscripts or records as a rule commence with some benedictory word, such as *siddham* 'success' or *swasti* 'hail' or with the sacred particle *Om*   The last mentioned is almost universally used at the present day   It may be either written in full or indicated by a symbol. The latter takes the form of a spiral, which may turn either to the right or to the left, and which is probably a conventional representation of the sacred *śarkha*, or conch-shell'   In editing the Mankuwar Stone Image Inscription of Kumāra-gupta, where this symbol is met with for the first time, Dr. Fleet remarks (*Corpus Ins Ind* , p 46, n 3) —" As was usual throughout the whole of the period covered by this volume, this word is represented by a symbol¹, not by letters   *Om* is not of very frequent occurrence at the commencement of Buddhist inscriptions " Thus both the scholars read the symbol as *Om*, but none has advanced any reason for their reading it so   Writing about eight centuries and a half earlier, Al Berum also says the same thing (Vol I, p 173) —" The Hindus begin their books with *Om*, the word of creation, as we begin them with ' In the name of God '   The figure of the word *Om* is ⟨symbol⟩   This figure does not consist of letters, it is simply an image invented to represent this word, which people use, believing that it will bring them a blessing and meaning thereby a confession of the unity of God "   This passage of Al Berum is perhaps responsible for the confident reading of Hoernle and Fleet   But the reading should be reconsidered in the light of the following points —

(*a*) In Bengal, this symbol was largely used in all ancient documents and manuscripts and in teaching alphabets to beginners they were taught to draw this symbol to start with   This custom was prevalent as late as twenty-five years ago, but has disappeared by this time   This symbol was called *āmji* and was supposed to signify the god Ganēśa, the giver of success, being drawn to represent his elephant's trunk   In reading, it was read *Siddhir-astu*

(*b*) In the Gupta inscriptions this symbol only appears in those in which the customary benediction *Siddham* is left out, and nowhere does it appear with it   Consequently it must have stood for *Siddham*, and as time went on it must have become more and more customary to represent the word by this symbol

(*c*) In some inscriptions the symbol is found to precede *Om*, which would never have been the case if the two were identical   In such cases the reading given is *Om Om*, which is certainly not reasonable   Reference may be made to *Epigraphia Indica*, Vol XII, p 8, *Ibid*, Vol XIV, p 159, for examples of the joint use of *Om* and this symbol

In view of these facts, the symbol, I think, should be read *Siddham* or *Siddhir=astu* ¹

TRANSLATION.

Part I

May success attend !   In the eighteenth year of the victorious reign of His glorious Majesty Layahachandra-dēva, on Thursday in the dark Fourteenth Tithi, and under the star Pushya, Bhāvu-dēva, son of Kusuma-dēva, Lord of Karmānta, caused to be made the Lord Narttēśvara   .   . on the 14th day of Āshādha (calculated) by the movement of the moon And all the letters engraved by Ratōka

Part II.

Also engraved by the illustrious Madhusūdana.

---

¹ [This seems to be the proper interpretation of the symbol, in spite of Al Berum's statement to the contrary. In the Tamil country the same symbol slightly modified ⟨symbol⟩ is even today called the Pillaiyār-śuli ' Ganēśa's curl' and is first taught to be drawn by children before they begin to learn their alphabet —Ed]

2. THE BĀGHĀURĀ NĀRĀYANA IMAGE INSCRIPTION.

This inscription was brought to my notice in 1912, when I went to Tippera to secure the inscription described in the foregoing pages. Ramānath Chakravarty, a former pupil of mine, whom I met in Comillā, gave me to understand that an inscribed image of Vishnu had been discovered in a village near the Sub-divisional town of Brāhmanbāṛā in the Tippera district and that the local people had been able to read the word Mahīpāla on the inscription. My curiosity was considerably roused to come across an inscription of the Pāla kings so far east from their native home in north Bengal. Pressure of business, however, did not allow me to go after the inscription at that time, and for the next two years I was too busy elsewhere to think of getting at it. Towards the beginning of the year 1914 a friend of mine, Babu Upendrachandra Guha, B A, B T, who is an enthusiast in matters archæological, secured chalked photographs of the inscription and published an article with a reading of it in the local monthly, the *Dacca Review*. The reading, however, was rather defective, and I gave a more correct reading in the next number of the journal. I also published a correct reading of the inscription in the January number of the *J A S B*, 1915 and pointed out its importance.

The image containing the inscription was dug out of a pond some ten or twelve years ago in the village of Bāghāurā near the Sub-divisional town of Brāhmanbāṛā in the district of Tippera. It is now worshipped by a half-crazy woman in the neighbouring village of Vidyākūta. In January 1915 I visited the spot and obtained some excellent photographs of the image, but no amount of persuasion could prevail upon the woman to part with the image.

The inscription purports to be of the third year of king Mahīpāla, presumably **Mahīpāla I** of the Pāla dynasty of Bengal. It records the installation of the god **Nārāyana** in **Samatata**, included in the kingdom of Mahīpāla, by a merchant, **Lōkadatta**, son of **Vasudatta** and hailing from the village of **Bilakīndaka**, in furtherance of the religious merit of himself and parents. Bilakīndaka is in all probability the village Bilākēnduāi, situated close to Bāghāurā.

The importance of the inscription is twofold. First, it definitely settles the position of the kingdom of Samatata. There is no room for doubt now that the village of Bilākēnduāi must have been inside the kingdom of Samatata. Now let us recall what Yuan-Chwang says about Samatata. The pilgrim came to the country of Samatata going 1,200 or 1,300 *li* south of Kāmarūpa. Taking 5 *li* to 1 mile, 1,200-1,300 *li* represent about 250 miles. The country of Samatata was about 3,000 *li* (i e 600 miles) in circuit and bordered on the great sea. The land lay low and was regularly cultivated. Now, if we look round for the country which must satisfy all these conditions and at the same time must include the Brāhmanbāṛā Sub-division of the Tippera district, in which the village of Bilākēnduāi is situated, and if we remember that natural barriers such as mountains and rivers marked off one kingdom from another in those days, we cannot but accept the plain tract of land bounded by the Garo and the Khasi Hills and the hills of Tippera on the north and east, by the Lauhitya, or the old Brahmaputra river, on the west, and by the Bay of Bengal on the south as the ancient kingdom of Samatata. It is a perfectly natural geographical unit with neatly marked boundaries, comprising the eastern half of the present Mymensingh and Dacca districts lying east of the Brahmaputra, the greater part of Sylhet, and the whole of the Tippera and Noakhali districts. The distances between countries recorded by Yuan-Chwang are, in all reasonable probability, distances between the capital towns, and the distance of 250 miles recorded by Yuan-Chwang between Kāmarūpa and Samatata is pretty accurately the distance between Gauhāti and Comillā[1] by any modern route. The circuit of 600 miles is also right and the tract, which is a vast plain, borders on the great sea.

---

[1] I am of opinion that Badkāmtā, 12 miles west of modern Comillā, was the ancient capital of Samatata. *Vide* my paper " A forgotten kingdom of East Bengal," *J. A. S B,*, March 1914

There has been much discussion about the situation of the countries of *Shi-li-ch'a-ta-lo Kia-mo-lang-kia*, etc , mentioned by Yuan-Chwang in his account of the kingdom of Samatata , but no satisfactory solution seems to have been arrived at With our present identification of Samatata we may proceed to consider their cases also This is what we find in Beal's edition about them —

" Going *north-east* from this to the borders of the ocean, we come to the kingdom of Srikshetra (Shi-li-ch'a-ta-lo). Farther on to the *south-east* on the borders of the ocean, we come to the country of Kamalanka (Kia-mo-lang-kia) Still to the east is the kingdom of Dvārāpati (To-lo-po-ti) Still to the east is the country of Ishanapura (I-shang-na-pu-lo). These six countries are so hemmed in by mountains and rivers that they are inaccessible."

Now, the pilgrim says that the country of Shi-li-ch'a-ta-lo might be reached by proceeding *north-east* to the borders of the ocean This anomalous statement seems to have puzzled everybody, including Beal and Watters, as the borders of the ocean are never reached by going *north-east* from Samatata, wherever its position might have been in eastern India, and the fact that all the original copies of the Travels available, as well as the biography of the pilgrim, give north-east as the direction, has stood in the way of emending the text to *south-east* My studied opinion is that in spite of the unanimity of all the versions, north-east is a manifest mistake for south-east and the apparent unanimity arises from the mistake having originated in a very early copy of the ' Records ' The very qualifying phrase that the direction would lead to the borders of the ocean is sufficient for the emendation But the emendation is confirmed by the manner in which the succeeding sentences begin The next sentence begins thus,—" *Farther on* to the south-east, etc " and this would lose all force if " south-east " had not been the direction spoken of in the previous sentence If we accept south-east and move from Comillā in that direction to the borders of the ocean, we arrive at a place called at present Chattagram (Eng Chittagong), which was anciently called Śrī-Chattala, a name still frequently used Is there any reasonable objection to identifying Yuan-Chwang's Shi-li-ch'a-ta-lo with Śrī-Chattala of the present times ? It is evident that it satisfies all conditions.

The second importance of the inscription lies in the fact that it throws some light on an obscure part of the history of the Pāla kings of Bengal The Bangarh plate of Mahīpāla I[1] and the Dinājpur pillar inscription[2] inform us that some usurpers drove Vigrahapāla from the throne and that he, after losing his kingdom, took shelter in the eastern country where water abounds (*dēśē prāchi prachurapayasi*) His heroic son Mahīpāla recovered the lost kingdom of his father The two characteristics, water-abounding and eastern, agree well with the present districts which composed the ancient kingdom of Samatata,—so well that it is impossible to suggest any other country which answers equally to the description , and little room is left for doubt that the eastern country alluded to was the kingdom of Samatata The new Bāghaurā image inscription, which is the earliest of the reign of Mahīpāla, finally settles all doubts on the point When we find that Samatata was under Mahīpāla so early as in the third year of his reign, we cannot but conclude that it was Samatata where Vigrahapāla took shelter, suffering reverses in war with the usurper, and leaving north Bengal in the hands of the victor The fact of the earliest inscription of Mahīpāla turning up in Samatata points to his having probably been crowned there and this was perhaps the loyal country used by him as the base of operations in his fight with the usurper for the recovery of his father's kingdom.

The *śloka* in the Bangarh plate which describes Vigrahapāla's sojourn in the eastern country has been copied also in the Āmgāchhi plate[3] of his great-grandson Vigrahapāla III, where,

[1] J A S B , Vol LXI, pp 77-87 and *Gaudalēkhamālā*, p 91 Also *Ep Ind*, Vol XIV, page 324.
[2] J A S B , 1911, p 615
[3] *Indian Antiquary*, Vol XXI, pp. 97 101.

curiously, it is applied to him. Mr R D Banerji, M A, in his Monograph on the Pālas of Bengal,[1] is inclined to discredit the statements of the *śloka* on this ground When a *śloka* describing some events in the history of a monarch, occurring in a copper-plate of his son, is reproduced in a copper-plate of the great-grandson of that monarch and is applied to that great-grandson, it is presumable that the former application is correct, and the latter plate is (i) either a forgery or (ii) the composition of a very silly panegyrist, who was unaware of the historical significance of the *śloka* and took it only as an attempt at conventional panegyrics, or (iii) the repetition denotes some similar event in the life of the latter monarch.

The inscription is incised under the lotus-seat of a standing image of Nārāyana (Vishnu) about 3' high, between two kneeling figures It is in a perfect state of preservation and is legible throughout without any difficulty. The lines measure each 6" in length and the characters are ⅜" long The characters belong to the North-Eastern variety, specifically called the Kutila character, which gave birth to the Bengali characters of the modern days· The inscription is dated; but the date is given in regnal years It refers itself to the reign of a king called Mahīpāla, presumably Mahīpāla I of the Pāla dynasty of Bengal, Mahīpāla II had a very short and troubled reign, terminating in the successful Kaivarta revolt. As the chronology of the Pāla kings of Bengal is still uncertain, it is difficult to give the exact year of the inscription, but it cannot be far removed from 976 A.D

The language is Sanskrit In orthography, the only point to note is the absence of the *avagraha* sign in *punyayaśo abhi°* (l 4) No distinctive mark of *virāma* is added to 'final consonants There are numerical figures for 3, 2 and 7.

<div align="center">TEXT.</div>

1 [सिद्धिरस्तु]² सम्बत् ३ माघदिने २७ श्रीमद्मीपालदेवराज्ये
2 कीर्त्तिरियं नारायणभट्ट[।]रकाख्या समतटे वि(वि)लकीन्द-
3 कीयपरमवैष्णवस्य वणिक्लोकदत्तस्य वसुदत्तसुत-
4 स्य मातापित्रोरात्मनस्य पुण्ययशोभिवृद्धये³

<div align="center">TRANSLATION.</div>

May success attend. The year three, the 27th day of Māgha In Samatata, in the kingdom of Śrī Mahīpāla-dēva, this meritorious work, namely (the image of) the lord Nārāyana, is of the merchant Lōkadatta, belonging to (the village of) Bilakīndaka—a great devotee of Vishnu—son of Vasudatta, for the furtherance of the spiritual merit and fame of himself and parents.

<div align="center">3. THE KEOĀR VISHNU IMAGE INSCRIPTION.</div>

The inscription was discovered by myself in 1909 That year, in the month of June, I happened to be on a visit to the little village of Keoār, some three miles to the south-east of Rāmpāl, the famous site of the ancient capital of the Sēna kings of Bengal, in the Munshiganj Sub-division of the Dacca district I found the image lying on its face, half buried in earth, and on turning it for inspection, I noticed the inscription The image has now been fixed against the outside wall of the *math* in the same village

The inscription is incised on the pedestal of an image of Vishnu, about 3' in height It is in four lines, each line measuring 7", but the last line is an inch shorter, for want of plane space to write upon The letters are about ½" in height and are everywhere boldly incised

---

[1] *Memoirs, A S B*, Vol V, No 3. ²Expressed by a symbol. ³ Read यशोभिवृद्धये

The second couplet has been much injured towards the end by the erosion of the stone, and the several letters could with difficulty be recognized[1]

The inscription is in verse throughout, and consists of two couplets   The language is correct Sanskrit, with only a single exception, which is perhaps an engraver's mistake   The letters belong to the Kutila variety, current in Bengal in the 10th, 11th, and 12th centuries. The inscription is not dated, but paleographical considerations would not possibly allow of an earlier date than the early part of the 13th century A.D.   It records the installation of an image of the lord Vishnu by one Vangōka, great-grandson of Saurisarman, grandson of Pitāmaha and the offspring of the couple Sayōga and Anuyamī

The absence of a royal name in a pretty long inscription is rather remarkable, though by no means uncommon   It may suggest that the inscription belongs to a period when there was no king worth the name to refer to at the time of the installation of the image   There is another fact which confirms this supposition.   The Brāhmana family to which Vangōka belonged is spoken of as hailing from some place in Varēndrī, i e. north Bengal   They must have migrated to Vanga, which included the *pargana* of Vikramapura, the region where the image was found, not long before the installation of the statue, as the fact of their descent from a stock of Varēndrī was, in Vangōka's estimation, still of sufficient distinction to merit a special mention.   The name Vangōka is also significant.   In a family where the first three of the line are named in pure Sanskrit after the sacred names of gods, the naming of the fourth member after the name of a country signifies that he was born just after the family had migrated into that country, and the migration was an important event in the family history

The period at the end of the 12th century A.D. which necessitated the migration of Varēndrī Brāhmanas from north to east Bengal must have been the time when Lakshmanasēna was worsted by Muhammad-bin-Bakhtyar, about 1200 A D, and the old king and his court fled to Vikramapura   Muhammad established his court at Deb-kot, 14 miles south of Dinajpur, in the heart of Varēndrī, and orthodox Brāhmanas must have had a rather hot time of it, necessitating flight to the Vanga country, where the Sēnas still had sway.   The history of the reign of the sons of Lakshmanasēna is very imperfectly known, but erasures of royal names on their copper-plates suggest fratricidal war and consequent anarchy, and the present inscription may well belong to this troublous period.

4. THE DEULBĀDĪ SARVVĀNĪ IMAGE INSCRIPTION OF MAHĀDĒVĪ PRABHĀ-VATĪ, QUEEN OF DĒVA-KHADGA.

Deulbādī is a village situated about 14 miles south of Comillā, on the trunk road running from Comillā to Chittagong. The image with which we are dealing was found about two decades ago by one Muhammad Faqir Choudhary, when demolishing the ruins of an ancient structure standing on plot No 447 of the Settlement Map of Jāmmurā, a *mauza* in which the small village of Deulbādī is included, under Police Station Chauddagrāma, in the Tippera district. A fine brass statuette of the sun-god, in which the god is represented sitting inside his one-wheeled car, drawn by seven spirited horses, as well as some brass *lingas*, of which one was inscribed with a short votive inscription,[1] were discovered along with the image of Sarvvānī Babu Taranath Chakrabartti, the then Sub-Inspector of Police in charge of the Chauddagrāma Police Station, secured the images and placed them with one Kailās Chandra Chakrabartti of Deulbādī There the images remained for about sixteen years, until they were bought by Babu Saratchandra Chakrabartti and Babu Nibaran Chandra Chakrabartti of the village Dājdi, Police Station Chāndpur, District Tippera There two brothers are the priests of a temple on the Chandimurā peak of the Lālmāi Hills in the district of Tippera, near the Lālmāi Station on the Assam Bengal Railway As the image installed in the temple of Chandi had long disappeared, these two brothers were anxious to get an image of Chandi for their temple, and they obtained the present image from a cousin of Kailās, who in the meantime had died The image was brought to Comillā along with the other images discovered, and for cleaning they were placed in the care of Babu Maheśa Chandra Bhattāchāryya, a well-known Homœopathic druggist When the images were with Maheśa Babu, the inscriptions on the Sarvvānī image and on one of the *lingas* began to attract attention Babu Anukūlchandra Roy, Manager, Wards' Estates, Comillā, sent me an imperfect rubbing of the inscription on the image. I at once recognized that this was a new inscription of the Khadgas and wrote to Anukūl Babu to that effect With the help of Mr F C French, C S I, I C S, late Commissioner of the Dacca Division and President of the Dacca Museum Committee, I opened negotiations for the acquisition of the image for the Dacca Museum and went over to Comillā and obtained rubbings of the inscription and photographs of the image The owners of the image, after much persuasion by Rai Annadāprasad Sen Bahādur, the Additional District Magistrate, and Mr T Emerson, C.I E, I C S, the then Magistrate of Tippera, consented to part with the image on condition that a duplicate should be made for them and a sum of money given. At this juncture the annual grant received by the Dacca Museum from the Bengal Government was reduced from Rs 6,000 to Rs 3,000 and all ideas of acquiring the image had to be abandoned. The image was taken to the temple at Chandimurā and set up for worship I am informed that it has since been stolen from the temple and lost sight of

The image is of the goddess Sarvvānī, one of the forms of Durgā It is about 20″ in height and rather heavy A portion of the rim of the top towards the proper left is broken away and lost The image is cast in low relief The technique is rather crude, and the pose rigid. The goddess has eight arms, holding on the proper left, from the bottom upwards, the thunderbolt, the bell, the bow and the shield, and on the proper right, from the bottom upwards, the conch-shell, the goad, the sword and the wheel Two maids are on her two sides, holding fly-whisks She stands on a lotus-seat on the back of a couchant lion, with a rather well-executed head. The image was gilt all over with thin sheets of gold, the pious work of queen Prabhāvatī, and the original gilding is still intact in places The white patches in the photograph show where it still clings fast.

---

[1] ই[ব*]ষ্কৃবিষ গাচার্ষ্যষ[স*]মৃর্ষ্য.

The inscription refers itself to the reign of a king called Dēva-Khadga of the Khadga line of kings, who ruled over Samataṭa[1] towards the end of the 7th century A D. The existence of the Khadga line of kings in east Bengal became known from the discovery in 1884 of two grants of Dēva-Khadga, evidently the most powerful monarch of the line These two plates were finally edited by the late Babu Gangamohan Laskar, M.A., in the *Memoirs of the Asiatic Society of Bengal*, Vol. I, No. 6

The inscription records the names of three generations of the Khadgas;—Khadgōdyama, the founder of the line, his son Jāta-Khadga and his son Dēva-Khadga. All these names were known from the copper-plate grants of Dēva-Khadga referred to above, and it has nothing new to tell us in this respect. It informs us that Prabhāvatī, queen of Dēva-Khadga, caused the image of Sarvvāṇī to be covered with gold leaves out of reverence for the goddess The name of Prabhāvatī also was known previously, as she figures in one of the plates of Dēva-Khadga as a donor of land to a Buddhist monastery The royal family of Samatata seems to have been of a particularly religious turn of mind Yuan-Chwang states that Śīlabhadra, the head of the University of Nālanda, came of the royal stock of Samatata We can hardly conceive at this distance of time what an exalted position it must have been As the head of the greatest centre of Buddhist culture of the time, he must have occupied the position of the dictator of the then Buddhist world It is probable that he was a Khadga, and those who kept alive the name of Khadgas in later times tried in their way to emulate their illustrious predecessor by noble deeds of piety and benevolence Dēva-Khadga was a donor of land to Buddhist monasteries, and his wife and son also followed in his footsteps, as appears from his grants Yuan-Chwang calls the king of Samataṭa a devout Buddhist and Dēva-Khadga seems very well to merit this appellation The pious soul of queen Prabhāvatī has once again spoken to posterity through the present discovery

The image reveals a curious state of religious belief prevalent in those days Queen Prabhāvatī and the members of her husband's family were all devout Buddhists, but all the same she did not feel it irreligious in any way to pay reverence to a goddess who must have belonged to the Brahmanical pantheon. Harshavardhana, to whose court Yuan-Chwang came, in a similar manner divided his veneration among the Buddha, the Sun-god and Śiva All these clearly show that we must revise our idea of the Buddhists and Hindus of ancient days as two communities shut up in watertight compartments They were more like the present-day Śāktas and Vaishṇavas than otherwise

Asrafpur, near the bank of the old and the real Brahmaputra, the find-place of the two plates of Dēva-Khadga, and Deulbādī, sixty miles south-east, almost at the foot of the hills of Tippera, the find-place of the present image, mark respectively the western and eastern limits of Samataṭa, the kingdom of the Khadgas

The inscribed surface at the base of the image is about 8″ in length, and the characters are approximately ¼″ long They are bigger in the two extreme sections than in the middle one. They are incised pretty deeply and are in an almost perfect state of preservation

The characters belong to the Eastern variety of the Gupta script current in Bengal towards the end of the 7th and the beginning of the 8th century A.D. Mr Laskar, at the time of editing the plates of Dēva-Khadga, assigned them to "the 8th or 9th century A D ", while Mr R. D. Banerji in his Bengali *History of Bengal* is, on paleographical grounds[2] inclined to push the date still further forward. I believe, however, that these Khadga inscriptions cannot be taken farther than the beginning of the 8th century A.D. No one, I believe, can

---

[1] *Vide* my paper "A forgotten kingdom of East Bengal," *J A S B* March 1914.
[2] *Vide* also Mr. Banerji's Monograph on "The Palas of Bengal." *Memoirs, A. S B*, Vol, V, No. 3, p 67.

compare the letters of the present inscription, as well as those of the two plates of Dēva-Khadga, with the letters of the Nidhanpur plates of Bhāskaravarman,[1] the Aphsad and the Shahpur inscriptions of Āditya-sēna-dēva, the Deobarnark inscription of Jivita-gupta, the Banskhera and Madhuban plates of Harsha, without coming to the conclusion that a span of about a hundred years covers them all   A comparison of the characters of the Khadga inscriptions with those of the earliest known inscriptions of the Pāla kings leaves no doubt that the former must be considerably prior to the latter, possibly by about a century

There is nothing special to note in the orthography, except the doubling of *v* after *r* in Śarvvāṇī   The use of only one symbol for *b* and *i* is almost the rule in Eastern Indian inscriptions, as in the modern Bengali language

The language is correct Sanskrit verse   The inscription is in three lines on three sections, the first two lines run over all the three sections, while the third line is incised only on the middle one

I edit the inscription from rubbings and photographs in my possession.

TRANSLATION

May success attend ! May welfare accrue ! There was an overlord of kings, Khadgōdyama by name   His son (became known) on earth (as) Jāta-Khadga   His powerful and benevolent son Dēva-Khadga was (like) a sword, a conqueror of all foes   Prabhāvatī, the queen-consort of this king, out of reverence for Śarvvāṇī, covered her image with gold

5. THE DACCA CHANDĪ IMAGE INSCRIPTION OF THE 3RD YEAR OF LAKSHMAṆA-SĒNA-DĒVA.

The inscription is on the pedestal of an image of Chandī, discovered about four decades ago in the ruins of Rāmpāl, the site of Śrī Vikramapura, the capital of the Sēnas referred to in their land grants, in the *pargana* that still goes by the same name, included at present in the Dacca and Faridpur districts   It is at present worshipped in a small temple situated in the Dālbāzār quarter of Dacca on the Farāshganj Road, a little to the east of the Northbrook Hall   The late Babu Baikunthanāth Sēn, Deputy-Inspector of Schools, of Sonārang, District Dacca, was an enthusiastic collector of images, quite a crop of which used to turn up every year in the course of casual excavations in and around Rāmpāl   These, on discovery, were usually put under a tree by a roadside to receive the chance worship of the passers-by   Sometimes they were put to altogether unholy uses and sometimes consigned again to neglect and oblivion   It does great credit to Baikuntha Babu that he alone, amidst the general callousness of his countrymen was alive to the artistic and archæological merit of these relics of the past, and not a few of them owe their safe preservation to his labour   Many pieces of his collection are, it is gratifying to note, now in the Dacca Museum   This inscribed image of Chandī was one of Baikuntha Babu's finds, and he must have presented it to the founder of the temple in which it at present lies.

---

[1] *Ep Ind*, Vol XII, p. 65   ² Expressed by a symbol.

The inscription, however, seems to have aroused little interest at the time of the discovery, and its existence was unknown to the gentry of Dacca In April 1911 Mr R D Banerji, M A., of the Archæological Survey, and some friends discovered it, and from that time it has been known to the public.

In August 1911 Mr Banerji published a reading of this inscription in the Bhadra, 1318 (B S), number of the *Pratibha*, the journal of the Dacca Sahitya Parishat in an article on king Lakshmana-sēna of Bengal Four months later, in the Pausha number of the same journal, in a long article on the Sēna kings of Bengal, I gave my reading of the inscription In June 1912 I published the inscription, with a half-tone reproduction of both the inscription and the image, in the *Dacca Review*, in an article on the era of king Lakshmana-sēna In *J A S B*, July 1913 Mr Banerji re-published it in his article on king Lakshmana-sēna The inscription has thus been published four times, yet it cannot be said that up to this time it has been properly edited Mr. Banerji's reading in the *J A S B.*, as well as his description of the image, is not free from mistakes.

The image is about 30" high and is a rather fine example of Bengal sculpture of the time of the Sēnas The goddess has four arms and she stands in a graceful *tribhanga* pose on a full-blown lotus over a couchant lion. Her upper left hand holds a bunch consisting of a half-blown lotus with some buds and leaves The lower left hand holds an ornamental basket-like thing, either a flower basket or a waterpot The upper right hand holds an elephant-goad and the lower one is in the *Varada-Mudra*. Two attendant female figures stand on the two sides of the goddess, and two elephants are pouring water over her from two pitchers She seems to be a curious mixture of Gaja-Lakshmī and Chandī and may represent the Śakti of the god Harihara

The inscription is in an excellent state of preservation The inscribed surface is about 9½" in length, and the characters are approximately ¼" high. The characters may be called Bengali characters of the 12th century A D They are not very well executed and are far inferior in execution to those of the Deopara inscription of Vijaya-sēna They may be compared in style and coarse execution to the Buddha Gaya inscription of Asōkachalla-dēva executed in the 51st *atīta-rājya* year of Lakshmana-sēna-dēva (*Epigraphia Indica*, Vol XII, p 29) In this connection I may lay stress on a fact which is sometimes forgotten Printed types have accustomed us to a standard; but in ancient times contemporary inscriptions varied as much in style as handwritings, because the inscriptions were always written with ink or lac on the surfaces to be inscribed and were then engraved by sculptors who were not always literate

The inscription refers itself to the third year of the era of king Lakshmana-sēna of the Sēna dynasty of Bengal As the era has been proved to have begun in 1119 A D,[1] the inscription must have been incised in the year 1121 A.D It records that *Adhikrita* Dāmōdara, son of Māladatta, began the image of Chandī in the third year of the era of Lakshmana-sēna and that his relative (younger brother?) Nārāyana installed the image in the fourth year The inscription is in two lines on three sections I edit it from the original stone The language is incorrect Sanskrit *Suta* and *adhikrita*, which should have been in the 3rd case according to grammatical rules, are both used in the 1st case

[1] *Indian Antiquary,* Vol XIX, p 1.

Note on the reading

The decipherment of this short inscription presents some very serious difficulties. The fourth letter in what I have read as *Māladetta* is very curious   It bears little resemblance to any letter or compound used in the inscriptions of the time   Mr Banerji has read it as *Malade-i*, but certainly *tta* it is not like any *i* hitherto met with in the inscriptions of the period   It has moreover no perpendicular straight stroke to the proper left, distinctive of an *i* of the period   The following additional objections to the reading may be advanced —

(i) *Maladei* must be a Prākṛit form of Mūla-dēvī, and it is not easy to understand why a Prākṛit word should be used in a Sanskrit inscription

(ii) The use of only the mother's name to denote parentage is unusual in a North Indian inscription.

The letter that one would expect here is *va*, reading the name as Māladēva, but the letter used does not bear the slightest resemblance to the *va* of the period or any of the *va*'s used in this inscription   Then what is this letter ?   My reading of the letter as *tta* is only conjectural, based on the principle of greatest resemblance and   possibility and on a surmise which I shall advance presently.   [Perhaps we should read *Mālā-khadga* —Ed]

The second difficulty is about the reading of the name of the donor   Mr. Banerji has read it as *Dāmōdrēna*, but *ē* is clearly absent from *dra*.   We can read it at best *Dāmōdrana*, which is inadmissible   I have read it *Dāmōdarēna*, which is admittedly the correct form of the word   It should be noted that the *ā* mark of *nā*, the letter below *dra*, is projected upwards to a considerable distance   I believe the engraver wrote *Dāmōdana* through mistake and attempted to put in *re* between *da* and *nā*   Want of space stood in his way, and he fared very ill. The projection of *ā* of *nā* should, in my opinion, be taken for the engraver's attempt to make a small *ra*, and the *r* mark of *Dāmōdra* should be taken as the *ē* he tried to make.   I have thus read *rē* between *da* and *nā*.

The next difficult word is what I have read as *tad-bhrādakanā*   Mr Banerji read it as *tabhrūdakana*, which gives no meaning whatever, and which moreover is incorrect, as *na* has a clear *ā* after it   The word must be a qualifying word of *Nārāyanēna*, which follows it, and consequently must be in the 3rd case.   It is also expected that the word should signify some sort of relationship between the   donor and the founder, whose names prove them to have been close relatives.   I have therefore read the word as *tad-bhrādakanā* and would translate it as " by his younger brother "   The word *bhrādakana*, again, is perplexing and new.   I can suggest nothing better than that it was an irregular East-Indian compound of the two words *bhrātā* and *kanīyān*

Now, Dāmōdara was evidently a high officer of the state, and we may expect to see his younger brother too in a similar position   We know from the Tarpandighi plate of Lakshmana-sēna[1] that one Nārāyana-datta was his minister of peace and war   Can this Nārāyana-datta be the Nārāyana of the present inscription ?   Māla is an appellation of Vishnu, and the names Nārāyana and Dāmōdara are also   names of Vishnu   It was evidently a Vaishnava family and the name of the father agrees well with the names of his sons   If our conclusions, which are based on a series of surmises, are right, and if Nārāyana of the present inscription can be identified with Nārāyana-datta, the minister of peace and war of Lakshmana-sēna, we may read the name of Dāmōdara's father as Māladetta and emend it to Māla-datta by taking the *e* of *de* as an engraver's mistake

Mr Banerji read a *visarga* after *iti*, which is inadmissible , it should be read as *4*, resembling the modern Bengali symbol for 4   It is not usual to put the two ciphers of a *visarga* in touch with one another as has been done in the present case

---

TRANSLATION.

The year 3 of the era of the illustrious Lakshmana-sena-deva The (image of the) goddess Chandī was begun by the Superintendent (*Adhikrita*) Dāmōdara, son of Māladatta and was installed by his younger brother Nārāyana (in the year) 4

No 25 —A NOTE ON THE VAKATAKA INSCRIPTION FROM GANJ

(*No 4 of Vol. XVII of the Epigraphia Indica*)

BY K N DIKSHIT, M A, POONA

The last four paragraphs of the article on 'a Vakataka inscription from Ganj' illegible correction in the light of information available from the Poona plates of the thirteenth year of the Vākātaka queen Prabhāvatiguptā (*Ante* Vol XV, p 32 ff) and another grant of the 19th year of Pravarasēna (II) issued by the same queen Prabhāvatiguptā (*Ind Ant* Vol LIII, page 48). The characters used in the Ganj and Nachna inscriptions are later in date than those of the Poona plates of Prabhāvatiguptā The Prithvīshēna of these inscriptions is therefore more likely to be identified with Prithvīshēna II of the Bālāghāṭ plates, who was the great-grandson of Prabhāvatiguptā and not with Prithvīshēna I her father-in-law. On palaeographical grounds, Prof Jouveau-Dubreuil attributes the Nachna inscriptions to the fifth century instead of the 4th and to Prithvīshēna II, in preference to Prithvīshēna I (Ancient History of the Deccan, page 73) The present epigraph which is almost identical with the Nachna inscriptions, can therefore also be assigned to Prithvīshēna II who must have lived in or about the last quarter of the 5th or the opening years of the sixth century A.D
